THE ASIAN AGE

Death of a doctor: Time to fix hospitals' security

The ghastly rape and murder of a post-graduate resident doctor in a seminar hall at the state-run R.G. Kar Medical College and Hospital, Kolkata, last Friday has trigsered a nationwide protest by the medical community. It has his healthcare services across the nation including the national capital. Most elective surgeries and outpatient services were on hold for the second day on Truesday, as three lakh doctors joined the protests called by the Federation of Resident Doctors' Association (Fords).

The Kolkata, Police has arresided a civic votanteer attached the was the at of a single person. Meanwhile, five days having passed since the rape-murder, he high cour to Truesday handed over the investigation to the CEI on a plea by the young woman's parents amid mounting outrage and doubt. The demands of the doctors are genuine and just. They feel the incident was "perhaps the greatest travesty to have occurred in the history of the resident doctor community". First and forements on their list has been an effective police investigation that will put all responsible for the crime before the law and their fast-track trial.

The doctors are also demanding the rolling out of security protocols for all healthcare workers. The Indian Medical tracks and violence against doctors as a "determination of the promotest the call by doctors for the removal of all uthorities concerned who "could not protect the dignity and life of a female on-duty doctor" was concerned who "could not protect the dignity and life of a female on-duty doctor was unitary to the call the call by doctors for the removal of all uthorities concerned who "could not protect the dignity and life of a female on-duty doctor" was unitary to the call the call by doctors for the removal of all uthorities concerned who "could not protect the dignity and life of a female on-duty doctor" was unitary to the call the call by doctors for the removal of all uthorities concerned who "could not protect the dignity and life of a female on-duty doctor" was unitary to the cal

Try to bring down food prices

After five long years, India's retail inflation fell below the Reserve Bank of India's comfort level of four per cent in July as food inflation seased from previous highs due to a high base effect, government data showed on Monday. The consumer price index-based inflation was 3.65 per cent in July compared to 7.48 per cent in July 2024, an analysis of commodity-wise numbers show that the prices of several important commodities still remain elevated. Inflation in pulses, which is one of the important source of protein for vegetarians, remained high at nearly 15 per cent, 16-local per

Will troubled past retard Bangladesh's future path?

s the fleeing Sheikh Hasina Wajed chopped and changed ween Ganabhaban, the Bangladesh Prime Minister's official residence in Dhaka, and the Indian Aur Force base at Indian Aur Force base at Chazabad, near Delhi, her thoughts may have turned to Lee Kuan Yew's acerbic comment on her father "the hero who had opposed Pakistan and led East Pakistan to independence as Bangladesh... arriving in style at Ottawa in his own aircraft" for a Commonwealth summit meeting in August 1973. Singapore makes a fetish of austerity. Many years later I remember the rebyoung secretary of the regulatics.

LETTERS DON'T USE BALLOONS

Balloons add a lot of Ballions add a lot of festivity and gaiety to any occasion. We have been using them since long for different festiv-ities including Independence Day, However they cause considerable damage to the environment since they are made of plastic and not biodegradable. It would be an irony if we were to show our patriotism to the nation and at the same time pollute it with plastic causing immense harm, espe cially to the marine life, when the plastic bits finally end there. It can cause suffocation to the make up our ecosystem Let us pledge to eschew the use of balloons this Independence Day.

Reducing anaemia in women could boost India's GDP

able development, a sentiment echoed by the recently-released Budget 2024-25. The Gender Budget, an annual financial statement of the total allocation to women-centric schemes, witnessed an increase of over 30 per cent from 2023-24, cross-ing the 454labt-crore mark.

This year's Economic Survey examines critical factors for women's empowerment, including edu-lectors for women's empowerment, including edu-elements are interlinked, it recognises that nutri-elements are interlinked, it recognises that nutri-on serves as a cornerstone for boosting every aspect of an individual's life. Addressing the fact that simply ensuring adequate calorie intake is not enough, it underscores the essential need for ending micronutrient deficiencies to improve out-comes. Among these, iron deficiency and anaemia stand out as major challenges as they affect our body's functioning in various forms. Physiologically, naemia is characterised by lower-than-normal levels of red blood cells or heamoglobin, leading to debilitating symptoms such as fatigue and breathlessness.

These symptoms are often dismissed or misat-tributed to other causes, masking the severity of the condition. More severe and lone-lasting health

implications elevates the risk of death among mothers and infants. Fifty-seven per cent of Indian women aged between 15 and 49 are anaemic, and his is an unrecognised source of increased expenditure on healthcare by both households and governments, both at the Central and the state levels. An equally pronounced effect of anaemia can be seen in our overall social and consomic development, sesuiting in poor performance at school and decreased physical performance at school and decreased physical performance at school and decreased physical performance has the properties of the proper

munity is currently falling short of achieving the Sustainable Development Goal 5, which aims for gender equality and the empowerment of all women and girls by 2000. With the target deadline just half a decade away, India has a critical oppor-

just hear a commitments into cactons by investing in the health of adolescents actions by investing in the health of adolescents and women.

Fortunately, India's policy landscape is rich with initiatives designed to cumbat arasemia in women. The Anaemia Mukt Bharat (AMB) strate gy stands out as a focal point for a vast range of interventions aimed at anaemia reduction. To the control of the co

anaemia persists across both urban and rural pop-ulations, normalising symptoms like fatigue and pallor among women. The first step to combat this is to educate communities, families and individu-

als. Effective messaging can ensure that girls and women comply with the services and consume available supplements.
Widely disseminated and accessible information, whether incorporated into the school curricula or shared widely via health infrastructure or even mass advertising campaigns, is vital to establishing a sense of urgency around mitigating the lissue. This, coupled with existing efforts under AMB and other programmes, can prove effective in the long-term reduction of nanemia and ensure sostiainable development.

Malpractices in exams

Zero tolerance, use of tech needed to curb them

Manoj Pandey

we examination-related news hogged the headines recently—the NEET examination paper leak and the likely compromise of the UGG-NET exam. That makes one wonder whether the agencies conducting the exams were incapable of preventing these malpractices, and whether the students/candidates selected in the previous examinations are above board.

The malaise is deep, and there

above board.
The malaise is deep, and there are many factors that have contributed to it. The huge number of students/job aspirants running into lakhs, is any testing agency's nightmare. Exams have to be conducted within a tree female and the state of time-frame and at many centres across the country. Monitoring each centre becomes difficult.

THE TRIGGERS

The high stakes in clearing an examination, especially one that secures a seat in a professional institution or a government job, induces people to adopt, and pay for, unfair means. The social stigma against committing misdeeds has become rather weak. Also, the vulnerability of the legal and policing systems encourages malpractices. Thus, strong demand, coupled with easily available offers of back-door entry and low deterrence, provide a fertile ground for malpractices. If the testing agencies were zero-tolerant, they could have dealt with the menace. However, conducting examinations is considered a routine bureaucratic exercise, needing no reforms. What comes out of failed exams is undeserving candidates getting intry into institutions of higher learning and in government jobs. Such entrants are likely to keep indulging in corrupt practices. Worse, they are seen as role models by other aspirants. It would not be an exaggeration to say that the system fails when examinations fail.

The sundry cases of paper leaks and impersonation that spring up in the media are only the tip of the iceberg. Having worked in the UPSC and SSC (Staff Selection Commission), I can say that most major job-related exams fail in selectives. And some fail in selectives to malpractices as such.

In many cases of mass-copying and paper leaks, testing agencies and the police approach the problem from narrow angles, and

Paperboards Ltd with the main company to position itself as a leader in the
paperboards market.

Margin-trading norms being reviewed: Bajpai The Securities and Exchange Board of India (SEBI) is reviewing margin-len norms to generate better response to the system. The qualifying criteria for participation in Indian depository receipts (IDR) would also be re-looked before the guideline are finalised, said Mr GN Bajpai, Chairman, SEBI.

when the matter is taken to the when the matter is taken to the courts, the judiciary too often takes a narrow view; for example, by seeking specific evidence which is typically not easy to collect in such cases. Politicians seldom bother to find long-term solutions. Usually a probe is ordered, action is taken easinst a few, a committee of

a probe is ordered, action is taken against a few, a committee of experts is constituted, and sometimes the candidates who suffered are compensated. After a brief full, another examination fails, and the political class indulges in a new blanne game. The chalt had (everything goes) attitude of the bureaucracy further crodes the system's capacity to address corruption in the system. The Supreme Court aptly observed in the NEET paper leak case that even a 0.001 per cent negligence is too much. When the number of candidates runs into labls, even this minute When the number of candidates runs into lakks, even this minute error would mean many undeserving candidates qualifying. That begs the question: Are there no practical solutions to curb exam-related malpractices? I will list just two. It is common knowledge that examinations conducted by the UPSG and SSC, and the JEE and CAT have senerally remained.

examinations conducted by the UPSC and SSC, and the JEE and CAT have generally remained malpractice-free. In SSC, JEE and CAT, modern technology has been in use for years now, which has made it difficult for examinees to cheat. Technology helps testing agencies better monitor individuals and processes, and quickly introduce barriers against new methods of malpractice. An even better way is to have examinations in many tiers, as is done by the UPSC and SSC. Though criminal syndicates can penetrate all levels, the chance of their success go down drastically with each step. A new law can also act as a quick-fix. However, exam malpractices would go only if governments, testing agencies and the political leadership decide to take the bull by the horns.

THE WIDER

ust when you thought it couldn't get worse for Russian President Vladimir Putin, it has. The Ukrainians have turned the tables on their enemy and seized 1,000sq km of Russian territory in Kursk

Ukrainians have turned the tables on their enemy and seized 1,000sq km of Russian territory in Kursk province, the biggest enemy incursion into Russia since World War II. Can the already overburdened Ukrainian military retain its gains? Every moment on the battlefield is fraught with risks. Travel away from the cooler Russian-Ukrainian plains to the heat of the Middle East. Israel appears determined to fight a multi-front war with Hamas in Gaza and Hezbellahin Lebanon. It's also slapped the Iranians on the face by assassinating the Hamas in Gaza and Hezbellahin Lebanon. It's also slapped the Iranians on the face by assassinating the Hamas in Gaza and Hezbellahin Lebanon. It's also slapped the Iranians on the face by assassinating the Hamas in Gaza and Hezbellahin Lebanon. It's almost his member of the Brain on the Hamas with the Hamas in Gaza and Hezbellahin Lebanon. It's almost his member of the Brain of the Hamas with the Marsk with the Marsk counter-invasion. In June, he said at the Stanghait Cooperation Organization (SCO) summit in Kazakhstan he was willing to take forward a peace pact mostly hammered out between the two sides in Turkey earlier. These agreements remain on the table and can be used as a basis for continuing negotiations," Putin told delegates. The Russians insists the US and the Ususians in issist the US and the Ususians in Good of the Ususians in Garmain the Crimes which it invaded in 2014. for the Russian Black Sea fleet and for merchant shipping, Ukraine, in turn, could join the European Union trading bloc but not NATO or any other military alliance, inevitably, there were stumbling points with Russia demanding Ukraine leave Donetsk, Kherson, Zaporizhzhya and Luhansk. Ukraine flavier yefused to do so but it's clear there's enough ground for talks to start.

Now it looks like the Ukraine offensive is an attempt to gain leverage

Quagmire in West Asia, Ukraine The US seems either unwilling or unable to contain the conflicts in Russia-Ukraine and between Israel and Hamas

...

before a peace poker game begins. Kursk has a particularly bittersweet resonance in Russian military history. The Battle Kursk in 1943 involved 3,000 German tanks and 900,000 soldiers and an equal number of Russian tanks and reops. It was a decisive turning point in the war and the start of the retreat that ended in Berlin. The Ukrainians also know the bloody lessons of World War II so should they think hard before advancing deep into Russia?

into Russia?
When Hamas launched its strangely uncontested attack on Israel last
October, countries around the world shared Israelis' grief and anger. The

Many people optimistically assumed the US would want to clean the global slate and end both these wars before the presidential elections later this year

focus was on bringing back the Israel hostages who had been brutally seize But the global sympathy wave wore c rapidly as Israel smashed hospitals a schools in its broad attack on Gaza, schools in its broad attack on Gaza, turning the territory into an apocalyptic landscape where food and water are scarce and 39,000 people, mostly civilians, have been killed.

NETANYAHU ON THE OPPENSIVE Netanyahu leads a fragile coalition consisting of different shades of ultra-hardline right-wingers. The criminal cases against him are moving slowly through the courts but the consensus is he won't last long once the war's over.

consensus is new ont ask long once the war's over.

This week, the Israelis shocked the world by bombing a Gaza school. It doesn't appear even the US, Israel's benefactor, can bring Netanyahu to be Netanyahu could easily bring his one-sided war to an end but he doesn't over a earn it recent all is never the proportion. even seem interested in repatriating the remaining hostages still with Hamas.

Alternatively, he could spark a larger war that could engulf the entire Mideast region from Iran and Yemen all the way to Israel and Lebanon. Israel itself has come a long way from the democratic Middle East bastion that its founders wanted it to be. Instead, brutality to Palestinian prisoners is becoming common and senior politicians openly defend it on TV talk shows.

What's common in both Ukraine and Israel is that the Americans are either unable or unwilling to bring both these infinitely dangerous wars to an end. Many people optimistically assumed the US would want to clean the global slate and end both these wars before the presidential elections later this year. Now it looks like they may not he trying hard enough to end the Russia-Urraine war and they cannot restrain Netunyahu. Pax Americana appears to have been abandoned by the wayside in both war theatres. And the world can't figure how to resolve these crises in very different corners of the world.

STATISTALK.

Smartphones and quicker deliveries to drive India's e-commerce

India's e-commerce market is 562 billion (as of CY 2023). It grew faster especially post the pandemic at a CAGR of 28 per cent between 2020 and 2023. However, as far as e-commerce penetration is concerned, India lags behind global peers. There is massive headroom for e-commerce growth. By CY 2027, India's e-commerce market is likely to grow to \$140 billion at a CAGR of 23 per cent. E-commerce penetration is estimated to touch 9-11 per cent of retail by then. This is expected to be made possible by a couple of factors — increased smartphone usage and declining

Short Take

China's credit growth weaker than expected _

Bloomberg News

hina's credit expanded less than expected in Auly despite the central government's monetary easing, during what's traditionally a weak month for financing activities. Aggregate financing, a broad measure of credit, increased 771 billion yuan, according to Bloomberg calculations of data released by the People's Bank of China on Tuesday. That compares with a 1 trillion-yuan median forecast by economists in a Bloomberg survey, and an increase of 537 billion yuan in the same month a year ago.

The PBOC cut a string of interest rates in July in an attempt to boost confidence and demand. Central and local governments are also set to accelerate bond sales in the coming months, which will help push up the flow of broader credit to the economy.

Beyond seasonal fluctuations, China's borrowing has kept slowing over the past year as households stopped taking on more mortgages while a prolonged housing downturn takes a toll on incomes. After years of rapid debt build-up, authorities are finding it difficult to engineer the kind of credit booms that once propelled China. That's no longer the goal, however, as Beijing shifts the economy towards high-tech manufacturing and away from property and infrastructure-driven growth.

Impact of institutional stigma on Dalit business owners' earning capacity

A look at how the earning capacity of business owners vary even within marginalised communities due to social stigma. Such stigma adversely affects the economic opportunities of Dalit business owners, who experience lower income levels compared to other disadvantaged communities

Rebecca Rose Varghese

Raj P., Roulet T.J. and Bapuji H., 'It's not who you know, but who you are: Explaining income gaps of stigmatized-caste business owners in India', PLoS ONE 19(8), 2024

ccording to the "Income and

ccording to the "Income and Wealth Inequality in India" report published by the World Inequality Lain His year, the top 1% of Indians received 22.6% of the national income in 2022, a significant increase from 11.5% in 1951. Meanwhile, the income share for the bottom 50% dropped from 20.6% in 1951 to 15% in 2022, and the middle 40% saw their share decline sharply from 42.8% to 27.3% over the same period.

Reports analysing income inequality in India have been on the rise. While many studies focus on how economic and social discrimination affect people's ability to improve their economic mobility, Raj P, Roulet TJ, and Bapuji H. examine the role of stigma in income inequality among Dalits, specifically focusing on business owners. Factors like social and human capital significantly influence economic apilat, it is crucial to understand how effectively Dalits can leverage these resources compared to other disadvantaged communities due to the unique impact of stigma. Through quantitative analysis, the authors provide an in depth examination of how systemic stigmatisation impacts the economic status of Dalit business owners. While other disadvantaged groups also face inequalities along demographic lines such as gender, race, and caste, the stigma against Dalits exacerbates their economic challenges. For instance, women face luring and wage discrimination, losing challenges. For instance, women face hiring and wage discrimination, losing about half a job level and 15% in wages, and similar income disparities affect racial minorities, LGBT individuals, and those from disadvantaged social backgrounds. However, the stigma

ociated with being a Dalit according to the authors, further restricts access to resources and opportunities, leading to even greater economic disparities.

Institutionalised stigma

Institutionalised stigma
A central theme of the research is the concept of institutional stigma, which is defined as the stigma ascribed to individuals based on their demographic group membership. This stigma operates subtly through interconnected social mechanism, reflecting societal power dynamics and serving as a tool for dominant groups to exert control over marginalised communities. The prejudice resulting from stigma is perpetuated through multiple "institutionalised" channels, including access to resources, opportunities, and individual dignity. Such stigma adversely affects the economic opportunities and outcomes for Dalit business owners, who, due to their historically marginalised status, experience lower income levels compared to other disadvantaged communities. This systemic stigmanisation restricts their access to resources and opportunities, hindering their economic advancement.

Defining capitals

To understand how societal factors affect
Dalit business owners' economic
progress, it's crucial to explore the roles
of social and human capital. Social capital
encompasses the networks and
relationships individuals leverage for
social mobility, divided into bonding and
bridging types. Bonding social capital
refers to ties within one's immediate
community, such as family and friends,
while bridging social capital involves community, such as family and friends, while bridging social capital involves connections beyond communities. Institutional stigma tends to worsen the economic disadvantages faced by Dallis, especially at higher levels of bridging social capital, due to increased out-group prejudice. Human capital, by contrast, focuses on individual capabilities such as education and professional skills.

Methodology data from the India Hum Methodology
Using data from the India Human
Development Survey (HDS) of 2011,
which includes data on caste, business
ownership, and income, the study
employs Ordinary Least Squares (OLS)
regression models to analyse income
disparities among business-owning
households. The survey has covered ov
42,000 households from different

regression mouses to analyse income dispartites among business-owning households. The survey has covered over 42,000 households from different demographic groups, in 373 districts across India. The survey shows that 21% (8,800 households) own at least one non-farm business, that are mostly a micro or small business, with an income around tlakh, annually.

Moreover, to assess the impact of social and human capital on economic outcomes, the study uses business income as the total income from a household's business. Given that business income data can be skewed, a log transformation is applied to stabilise variance and normalise the distribution. Institutional stigma is captured with a dummy variable, distinguishing Dalit households. Social capital is evaluated through the number of professions a dought of the control ing for bonding social capital. Human capital is represented by the highest level of adult education in the household had in sued both as a control variable and in interactions to test its effect on mitigating income disadvantages related to institutional sigma.

Stigma and income

Stigma and income
The study reveals various findings on how stigma affects an individual's capacity to earn, highlighting the complex interplay between social and human capital in this context. Dalit business owners earn less than their counterparts from other disadvantaged communities as

institutional signal has a fregative correlation with business income. Moreover, while social capital is generally advantageous, it has less impact on Dalit business owners' ability to earn more compared to other business owners. This

advantageous, it has less impact on Dalit business owners' ability to earn more compared to other business owners. This is particularly true because Dalits must bridge social capital, and cultural and normative barriers hinder their ability to benefit from these connections, even when they exist. Though the authors initially hypothesise that human capital can mitigate income disadvantages for Dalit businesses, the data analysis reveals otherwise. While human capital is crucial in influencing income outcomes and benefits business owners from both stigmatised and non-stigmatised communities, it is insufficient to overcome the income disadvantage resulting from institutional stigma for Dalit entrepreneurs. This finding underscores the limitations of human capital in addressing systemic inequalities.

The findlings must be considered within the context of their limitations. For instance, the authors note that the indicator of social capital is somewhat coarse, as it captures data on people's connections to various groups and professions but does not measure the undersor of the singular to the signant and perceptions attached to certain groups, the paper highlights the inadequacy of general or universal policies and strategies in addressing these disparities. It underscores the need for tailored policies that cater to the specific needs of each community. Thus, a more nuanced approach is essential to ensure that individuals from stigmatised groups can ascend the economic mobility ladder.

"What is the difference between awful

and awesome?"
"I will tell you a story. Long, long ago, there was a king. He was an awful king. People were awfully afraid of him. He had a queen who was awfully good. The king was awfully good to her sometimes but sometimes treated her awfully. But his courage and strength were such that he inspired awe in others. He was awesome. He was awfully proud of his strength."

He was awfully proud of his strength."
"Is this a long story?"
"Awfully long. But I will cut it short.
One day, a snake bit the king and he died.
The queen wept for joy and died two days
later bitten by the same awful snake."
"An awful story!"
"Conditions of the same awful snake."

'An awtu story:
''Good.' Out have used the word awful correctly. 'Awful' originally meant 'awe-inspiring.' It no longer has that meaning. Now 'awesome' is used in the sense of 'awe inspiring.' It is an awesome spectacle. 'Awful' means 'horrible or umpleasant.' He is an awful fellow. She has awful manners. It also means 'excessive, large.' He has an awful lot of admirers. It am in an awful hurry to go. 'Awfully' means 'very.' He is awfully nice. The picture was awfully bad. When it is not followed by an adjective, awfully means 'in an umpleasant or horrible way'. He behaved awfully.'
"These are tricky words, aren't they?" "Yes. Note that the 'awe' in 'awful' doesn't have an 'e,' but it has an 'e' in 'awesome'.' "Good. You have used the word awful

awesome'."

"Why do we have such awful

"Why do we have such awful spellings?"

"I don't know. By the way, 'awful,' 'awfully' are used generally in conversation. They are not used in formal writing. 'Awesome' can be used colloquially and also in serious writing."

"What is the meaning of 'otiose?"

"Otiose' is a formal word which means 'serving no useful purpose, unnecessary. 'This is used of words, ideas, etc. Example: Perhaps he thought that to be immortal, a speech should be eternal. He spoke for a very long time. He kept on repeating whatever he had said carlier. His otiose remarks irritated the audience. The first 'o' in the word is pronounced like the 'oi' in home,' the 'is pronounced like the 'oi' in home,' the 'is pronounced like the 'oi' in 'home,' and 'se' is pronounced 's.' The stress is on the first syllable. Shall we discuss a spelling rule?"

"Just one, please."

"Last week. I said that words endine in 'last week. I said that week. I said that week.

syltable. Shall we discuss a spelling ruler "Just one, please."
"Last week, I said that words ending in silent 'e' following a consonant drop the 'e' when the 'e' is followed by a suffix beginning with a wowel. Believe * able - believable. But 'singe' and 'dye' retain the final 'e' when followed by singeing, dyeing. 'Singe' means 'to blacken by burning.'

The 'ge' is pronounced 'j' as in 'judge.' 'Dye' means 'to colour something by dipping it in liquid.' The 'e' in these two words is retained so that the words can be distinguished from 'singing' and 'dying.' I will stop here. You are yawning."

"Thank you." Published in The Hindu on January 1,

THE DAILY QUIZ

The Independence Day of Pakistan is annually observed on August 14. Here is a quiz on the day, and the movements that led to this day

Sindhu Nagarai

QUESTION 1

This was a political movement in the first half of the 20th century that aimed for the creation of Pakistan from the creation of Pakistan from the Muslim-majority areas of British India. This was led by the All-India Muslim League under the leadership of this barrister and politician, known as the creator of Pakistan. Name the moveme

and the person responsible for it.

QUESTION 2
The event of Partition was brought forth
by the Indian Independence Act 1947
under which the British Raj gave
independence to the Dominion of
Pakistan which comprised West Pakistan
and East Pakistan. What are the
present-day equivalents of these two
provinces?

CM CO

QUESTION 3

n of Pakistan was an independent federal dominion in the British Commonwealth of Nations, which existed from August 14, 1947 to March 23, 1956. What happened in 1956?

QUESTION 4
This was the boundary demarcated by the two boundary commissions for the provinces of Punjab and Bengal during the Partition of India. The term is also used for the entire boundary between India and Pakistan, What is it called?

Identify this man. In what capacity, has he served

ns and Answers to the previous day's

Questions and inswers to the previous day's daily quize. I. The U.S. took the top spot in the medial stable for the fourth time by winning the final gold in this event. Ans: Women's basketball 2. These countries won their first-ever Gold medials. Ans: Botswana, Dominica and Guatemala 3. These many National Olympic Committees were represented. Ans: 206

represented. Ans: 206
4. Of the 329 medal events, there were these many women events and mixed-gender events. Ans: 152 women's events and 20 mixed-gender events. S. Swappil Kusplae and Aman Sethawat won medals in these events. Ans: Men's 50 metre rifle three positions event and Freestyle wrestling 57kg.
6. The connection between Leon Marthand, Molile O'Callaghan, and Torri Huske. Ans: The most decorated athletes at the Games with Marchand winning four pendis.

The Elon-Don Show, Confirming, Revealing

'X Pe Charcha' threw up two dissonances

When the world's richest person and the world's brashest person have a chit-chat, people listen in. On Monday eve-ning, the 2-hr 'X Pe Charcha' between Elon and Don was both confirming and revealing. Trump was at his famili-ar brazen 'best', promising the 'largest deportation effort ever seen in this country', while (correctly) describing Biden's exit from the presidential race as a 'coup'. On his part, the Tesla-SpaceX boss reconfirmed his endorse-ment of Trump, even as the latter said Tesla makes 'great products', but that 'doesn't mean everybody should have an electric vehicle', Incidentally, the former prez's 'Chai-

na, Chai-na, Chai-na' trope was barely touched upon. Two points of differences within the 2-member mutual admiration club stood out. One, Musk made a pitch for EVs, stating, 'When you look at [Tesla] cars, we don't beli-eve that environmentalism, that caring about the envi-ronment, should mean that you have to suffer. So, we make sure that our

cars are beautiful, if they drive well, if they're fast, they're, you know, sexy.' Remember, Trump is no EVangelist, having earlier vowed to roll back federal subsidies. Only recently did he become 'okay' with EVs, his impec-cable logic being: 'I'm for electric because I have to be,

you know, because Elon endorsed me very strongly. So, I have no choice." Two, while Musk advocated for addres-sing global warming. Trump insisted 'the biggest threat is nuclear warming'. Musk is heard laughing, thinking it's a wisecrack. Trump reiterates, 'No, really,' adding that his 'Drill, baby drill' polley on increasing domestic production of oil and gas will continue if elected.

No Elon-Don chat can be bereft of a sense of the incre dulous. This came when Kamala Harris' opponent described her 'drawing' on the latest Time magazine cover making her 'look like the most beautiful actress ever to live', and 'very much like a great first lady, Melania'. As far as compliments go, this one's for the X Files. Which can do Musk's sagging social networking service a bigger fayour than amuse Trump fans.

Rankings Can't Be Window Dressing

The 2024 National Institutional Ranking Framework (NIRF) Rankings, an annual exercise launched in 2016 to rank higher education institutions (HEIs), did not have many surprises. IIT's and IISc Bangalore topped the charts yet again. Buoyed by NIRF's success, however, the ministry of skill development and entrepreneurship (MSDE) wants to launch a similar exer cise for its 15,000 ITIs.

cise for its 15,000 FTIs.
NIRF was launched as a counter to international HEI rankings
because the parameters of these lists did not reflect the Indian
context. It was meant to be a reliable tool for students to make informed choices about institutions and courses. It was hoped that
NIRF would spur competition, pushing institutions to improve

NIRF would sput competition, pushing institutions to improve to compete internationally. Now, eight years down the line, Go must assess whether NIRF has succeeded in raising standards, unleashed R&D competition, helped drive resources for the best-possible outcomes, improved academic output and collaborations, and hamched new peer reviewed publications and internationalised campuses. Rankings must be more than an annual validation exercise and a marketing tool. So, MSDE must first determine the purpose for ranking ITIs. The biggest chailenge for ITIs is the inability to attract students — 43% enrolment rate in privately managed ITIs and 57% in government-managed ones. Only 6% of senior secondary-level students opt for vocational education. The proposed ranking should be able to spur intake, without which there is little likelihood of accelerated investments and industry linkages to improve these institutions. Unless such ranking exercises help to improve the quality of institutions, students and faculty and encourage innovation, they will remain vanity exercises. hey will remain vanity exercises.

Destiny Tonight

A sure way to turn a spontaneous emotion into a mechani-cal gesture is to make something mandatory. Do time travel if you can and ask the citizens of the Soviet Union what they cia gesus and ask the citizens of the Soviet Union what they made of Victory Day 'celebrations' with rousing speeches and march pasts, and compare it with, say, Americans celebrating 4th of July with beer and fireworks, and you'll get what we're trying to get at. Showing one's patriotism, especially on 15th August, is a splendid idea. But are 'Soviet' strategies, like the one being enforced by Haryana's education ministry replacing 'Good morning,' Good afternoon' with 'Jai Hind' from tomorrow, a great idea? Beyond the gesture, enforcing 'Jai Hind' will likely remain just a, well, gesture. Instead, why not institutionalise what many restaurants and dining establishments do anyway? Make I-Day a giant party for all citizens, impressionable kids included. For the generation that witnessed India's cartliest Independence Days, it was a genuine cause for revelry. Merrymaking is in no way antithetical to showcasing one's happiness and pride.

ys, it was a genuine cause for revery, sterry making is in no way antithetical to showcasing one's happiness and pride. We suggest that tonight, we all celebrate I-Day Eve, not just commemorate Independence Day with our celebratory modes of choice—whether via libations or music, dancing or feasting. Every August 14th-15th night, we should have our annual twist with destiny. On full party-mode, not out of duty.

Is recession on its way? Or are market crash-turned-corrections in global stocks keeping us safe?

Health cover for all

GST on health insurance should apply on the genuine profit markup of insurers, rather than gross premium

POLITICAL CONSENSUS seems to be emerging on the need POLITICAL CONSENSUS seems to be emerging on the need to reduce—or even eliminate—the goods and services tax (GST) on health insurance policies, which is currently levied at 18% on the gross premium amount. A reduction in tax incidence on endowment life insurance policies, where gross premiums minus the savings are being taxed on a sliding path, is also being sought. Confronted with a crescendo of demands from the Opposition, and, rather unusually, from within the chelons of the government as well, finance minister Nirmala Sithararam said in Parliament recently that "several suggestions (in this regard) have come up and is shall take (these) up with the GST Council." She seemed to imply that the Centre would "several suggestions (in this regard) have come up and I shall take (these) up with the GST council." She seemed to imply that the Centre would have no problem with slashing the tax incidence on these financial services, if the state governments were indeed on board. Further, the GST rate rationalisation committee will reportedly meet later this month to finalise a proposal for 5% GST on both health and life insurance, and the

rate rationalisation committee will reportedly meet later this month to council is scheduled to meet on September 9.

But the question at hand would not be as simple as it would appear. India is one of the few countries in the world to tax insurance, in an egregious manner — for heath and term policies, the tax is still applied on the gross premium amounts collected. This is at odds with the concept that GST as a transaction tax must apply only on the value addition at each unit of the value chain, and inflates the overall cost of such insurance. The proper base of GST should be the net underwriting income of the insurer, which is the service (consumption) component of the premium. That is, premium, as reduced by claims, which is profit markup of the insurer, is only liable to be taxed, going by the basic tenets of GST. Those parts of the premium, which are of the nature of savings/investment, are not supposed to be taxed at all. So is a certain part of the cost of risk cover, which the insurance company tends to mitigate for itself via implicit transfers among the policyholders.

So, while the current debate is about the high GST rate on health insurance, shifting of the tax to the right base, which could be as low as 10-15% of the premiums in most cases, would be the most efficacious solution. This would help make health insurance more affordable, and arrest the trend of people going for policies providing inadequate cover. Besides,

This would help make health insurance more affordable, and arrest the trend of people going for policies providing inadequate cover. Besides, input tax credits must be made available to a host of hospital charges as denial of these credits also artificially jacks up premium.

The government spends over ₹7,000 crore a year to run the Pradhan Mantri Jan Arogya Yojana that seeks to provide a decent health cover of ₹5 lakh to 550 million people. At the same time, GST collections from insurance in FY24 were around ₹8,300 crore. Tax policies must go hand in hand with the goal of life and health cover for all by 2047. In advanced economies including the European Union, life and health insurance is exempt from GST/value added tax (VAT). A clutch of countries have in recent years shifted to a more sensible policy of applying GST/VAT only on the consumption element of insurance policies. India would do well the take a cue from them, as exemptions lead to distortions, denial of tax credits, and rise in the cost of these services.

WEAVING GLOBAL FABRIC

INDIA NEEDS STRONGER FOUNDATION TO BUILD ITS READYMADE GARMENT MANUFACTURING

Export tied up in knots

EXTILES, FABRICS, AND apparel have been central to India's identity. In ancient Greece and Babylon, the very word 'cottom' was regarded as synonymous with the country's name. The trade of Indian fabrics formed famed global routes. Yet today, Indian-exports in this sector face challenges, World Trade Organization statistics report put India in sixth position in terms of the export of Irinished clothing. According to the report, India's clothing exports in 2022 amounted to \$18 billion, while in comparison, Bangladesh exported \$494 billion worth of clothing, and even more worrying trend is that India's share in world exports in 104 billion worth of clothing, and even more worrying trend is that India's share in world exports in 104 billion worth of clothing, and the more worrying trend is that India's share in world exports in this sector.

The aforementioned outlook paints a picture where alarm bells are ringing for India in clothing export (it can also be understood as readymade garments). However, India has some important competitive advantages. There is easy availability of raw material for apparel manufacturing, India produced 23.83% of the world's cotton in 2022-23, And it consumes 22.4% of the world's cotton. Additionally, India is the second largest produce of silk globally; and 95% of the world's hand-woven fabrics are manufactured in India. The textiles and apparel industry directly employs 45 million people, and another 100 million in allied industries.

However, and the second largest produce of affain, is also the stage where manufactured in India. The textiles and apparel industry directly employs 45 million people, and another 100 million in allied industries.

India, with a \$7,205 million trade

India, with a \$7,205 million trade balance, is a net exporter in textile products, its readymade garment (KMC) exports have been lowest in 2023-24 in comparison to the years following the pandemic. Cumulatively, india's KMC exports for April-March 2023-24 were \$14,536.2 million, showing a decline of 10.2% over April-March 2021-23, a decline of 9.3% over April-March 2021-23, and gowth of 18.3% over April-March 2021-23, and gowth of 18.3% over April-March 2020-21, shows data compiled by the Apparel Export Promotion Council (AFPC). The figures are based on the Directorate General of Commercial Intelligence and Statistics and provisional data released on the Press Information Bureau by the ministry of Apparel in the Press Information Bureau by the ministry of Apparel products that are in high demand globally, only five are Indian exports, as against 11 by Eangladesh, 14 by Vietnam, and nine by Turkey.

The biggest impediment to India's apparel industry has been it to por economy of scale. The Economic Survey 2024 mentions that 80% of the textile and apparel producers are micro, small and medium enterplese, where the average In contemporary garment and textile manufacturing has suffered, it is necessary to look

mentions that SOVE of the textule and apparel producers are micro, small and medium enterprises, where the average scale of operatiom is relatively small. The manufacturing capacity is further marred by the fragmented nature of the apparel sector. While Maharashtra, Gujarat, and

Tamil Nadu are important sources of raw materials for the industry, the spinning facilities are predominantly in the south-one states. This leads to delays and higher transportation costs, thereby limiting efficient large-scale manufacturing and increasing the cost of production.

The powerfoom sector, which produces 60% of the fabric meant for export and \$4.4% of the total cloth produced the country, further contributes to the issue. In Tamil Nadu, for example, demands have risen to exempt the pow-

the country, further contributes to the issue. In Tamil Nadu, for example, demands have risen to exempt the power of the consector from a recent electricity tariff bike. According to data published on the National Import-Export for Yearly Analysis of Trade portal, Aranii Nadu exported the state. According to data published on the National Import-Export for Yearly Analysis of Trade portal, Aranii Nadu exported industries struggling in the state. According to the Tamil Nadu Federation of Powerlooms Association cited in an article in The Hindu last month, the economic burden of this hike can have a severe impact at a time when looms are being sold as scrap on account of lack of orders and weavers not being able to run them due to several other reasons. In addition, the Zeonomic Survey 2024 high the textile and paper lindustry.

Lack of capacity is thus a serious issue. As India aspires to raise its garment

Broadcasting needs a modern regulatory framework

that understands the uniqueness of OTTs and fosters

innovation in the sector while defending public interest

OTT streams flow differently

FY25, and our vid

by 2028

exports to \$40 billion by 2030, AEPC estimates suggest an additional 1,200 manufacturing units are needed. However, the current growth rate indicates that only around 200 new units are likely to be established by then.

To some extent, geopolitical crises prevalent all over the world are also responsible for India's falling textile exports. An Fe article published last month mentioned that globally, freight charges have rises by 40-50%, contributing to increased cost of production. Furthermore, with importers in Europe and the US still not maintaining inventies, the manufacturers' order book cycle has reduced to three months, compared to six months previously. Nevertheless, India needs to find stronger and deeper foundations to build its ready-made garment manufacturing and export set-up for the future.

Moving India's global value chain integration toward higher value-generating downstream activities such areadymade garments for clothing or apparel) and capacity creation is important. Investment in technology upgrade of weaving and processing segments is required. At the same time, improving the brand image of Indian apparel and garments is needed to increase the unit value realisation.

India's textiles have been unrivalied throughout history. Its diverse weather patterns, geographic regions, and cultures created unique fabrics and crafts like the golden silks of Assam, Banarasi like of Varanasi, and pashmina of Kashmir. In contemporary times, as india's garment and textile manufacturing has suffered, it is necessary to look at past cross and support of the content of the past of the p

Luxury looks like a China carry trade set to unwind

MULTINATIONALS HAVE A puzzle that they need to tease out in China, the world's biggest market for huxury products. What's driving a alump in sales' is it because a slowing economy is leading people to tighten their belts, or a sign that the Chinese no longer believe many brands can hold their value?

This question matters because it affects iuxury houses' long-term prospects. If the problem is just a weak ecomomy, they might accept recent earnings as a temporary rough patch and carry on business expansion as before. But if people start to see luxury products as mere commodities, brands have a much bigger problem and must start to cut back on supply and restore scarcity value.

In particular, executives need to worry about speculators, just like trend-chasing quant funds and japan's Mrs. Watanabe, they take one-way price bets and none in the industry really knows the scale of the gamble. The only difference, perhaps, is the lack of severage—carry traders, for example, would typically take out cheap loans to invest in something that has higher returns.

This phenomenon is likely to be pronounced in China. After all, Chinese are pragmatic bunch. Even when the economy was doing well, many buyers were making an investment case for their purchases. For instance, Chanel's classic handbags have been well-lowed by fashionistas, in part because of their resale value. The isonic French brand has been speeding up price hikes since 2016, doubling the consumers have been able to ride on Chanel's price hikes and sell their second—hand items for a profit.

Chanel typically reviews handbag prices twice a year, in March and September. It raised the flap bag prices by 6% to 8% this spring, with all its models retailing for more than \$10,000. This makes Chanel as much an inches the camel's back; JD. com Inc. sold Feitian at only 1,499 yuan per bottle as a way to draw shoppers to the particular of the spring with all time under share and endocring the spring with all the models retailing for more than \$10,000. This makes Chanel as

BROADCASTING TRANSCENDS MERE entertainment, and plays a vibrant, mul-tifaceted role as a ready source of infor-mation, education, and knowledge for mation, education, and knowledge for the masses. No wonder, governments world over leverage broadcasting to reach the public.

As India deliberates on new policies like the National Broadcasting Policy and the Broadcasting Services Regulation Bill (which the government baswithdrawn), a future-proof vision in such legislation is crucial. India needs to position itself as a robust and sustainable broadcasting like with a dual focus on enabling a vibrant domestic sector with diverse, high-quality content creaton in multiple languages, as well as a global content powerhouse. We should be exporting content world-wide, and honing technical skills in animation, VFK, and other emerging areas.

Distinct landscapes.

sunrise sector and is already contribution sunrise sector and is already contributing immensely to the growth of India's digital economy. According to a Broadband India Forum (BIF) study, the appeconomy, at the current rate of growth, is estimated to reach up to 12% of India's economy by 2030. On the other hand, TV broadcasting requires an action plan for resilience amid a secular downtum.

TV RAMACHANDRAN

ecular gownturn. While traditional TV fosters co While traditional TV fosters connection, OTT platforms offer flexibility. A survey by BIF and CUTS international found that 58% of respondent consumers watch TV as a family bonding activity. In contrast, OTT services cater to individual preferences, allowing users to enjoy content on their smartphones at any place and time of their choice.

The line and the contract of the contra

OTTs provide valuable data traffic for network

data traffic for network
operators, greatly contributing to their financial
health and sustainability. Hence, they
need to be nurtured and grown. Incidentally, the distinction between broadcasting and OTT was also recently reinforced
by the Telecon Disputes and Settlement
Appellate Tribunal, which ruled that OTT
services are not TV channels due to their
inherent differences and separate governine laws.

Concerns on regulatory overlap
Digital media, including platform
that host user-generated and profession
ally curated content, falls under the
purview of the ministry of electronics and

information technology. The Information Technology Act, 2000, and Information Technology (Intermediary Guidelines and Digital Media Ethics Code) Rules, 2021,

market is expected to reach \$3.22 billion by market is expected to be worth \$13 billion

Technology (Intermediary Guidelines and Digital Media Ethics Code) Rules, 2021, stabilish a robust mechanism to regulate these intermediaries. These framework of the regulation mechanisms and emphasised the importance of maintaining established practices and business processes.

The principle of equality

The principle of equality icle 14 of the Constitution guar

antees equal treatment only to persons who are similarly placed. This is a well-established point and various laws are available affirming the same. Therefore, applying broadcasting regulations that pertain to distinct carriage landscapes to OTTs would violate the very spirit of the Constitution. Policies related to broadcasting focus on the technical aspects of content delivery, while content-related regulations alm to safeguard moral and societal values. India's media landscape thrives on a unique blend of established and emerging trends. The Indian OTT market is expected to be worth \$1.3 billion by FV.25, and our video market is expected to be worth \$1.3 billion by \$0.28, boosted by the streaming industry which continues to invest billions of dollars in content development every year. India's content production has already reached \$200,000 hours annually. It is important to consolidate India's position as a digital media powerhouse that can captivate audiences globally and showcase the universal power of Indian storytelling.

To nutrure and grow this fertile and dynamic ecosystem, our broadcasting sector needs a modern regulatory framework that understands the unique nature of OTTs and fosters innovation in the sector while also safeguarding public interest.

JISTUTE LANGSCAPES, distinct Fights The rising popularity of over-the-top (OTT) platforms (such as Netflis, Hotstar, Amazon Prime, etc.) has sparked conversations on their place in the broadcasting policies, OTTs are functionally different from television and radio breadcasting services, While TV and radio transmit content through dedicated infrastructure like cable or satellite, OTT services send data over the "application layer" in Internet Protecol networks, much like any other information exchange over the internet. TV broadcasting and OTT markets are atwidely different stages of development—the former being over five decades old in India, whereas the latter emerged significantly only about a decade ago, OTT is a LETTERS TO THE EDITOR

Institutional bulwark

Distinct landscapes,

Every nation builds up rob Every nation builds up robust institutions that ideally ought to be agnostic to the government in power. This makes them trustworthy. The National Eligibility cum-Entrance Test episode this year raised grave concerns. The matter was so fundamentally relevant that it went right up to the Supreme Court. This was to improve the education system, not a campaign to traduce it. The Puja Khedikar incident has enabled greater focus on institutional aberrations in the selection of candidates to join the apex (vil) services. The Hindenburg-Securities and Exchange Board of India wrangle must be seen in a similar light. Trust in the market regulator is the sap that sustains investors in a progressive encount and pends to progressive economy and need be validated constantly. Strong institutions pave the path for

consistency in governance. The reverse is rarely true. —R Narayanan, Navi Mumbai

Indo-Maldivian ties

The recent decision by Maldivian President Mohamed Muizzu to hand over 28 islands to India represents a notable shift in the island nation's foreign policy. This appears to be aimed at strengthening bilateral ties, enhancing regional security, and

fostering economic cooperation. The recalibration of the diplomatic stance is likely motivated by the prospects of increased inclinations of the diplomatic stance and infrastructure development. As India has been a significant source of tourists and a key player in regional infrastructure projects, the Maldives stands to gain economically from this. —Amarjeet Kumar, Hazaribagh

Delhi-Malé ties get a leg up

piplomatic relations are often frugile, and while it's easy to disrupt them, mending the rift is a complex and painstaking task. External Affairs Minister's S. Laishankar's recent three-day visit to the Maldives exemplifies the successful repair of a strained relationship, showcasing his adept diplomatic skills. India and the Maldives enjoyed strong ties until the rise of President Mohamed Mutzzu, whose 'India out' campaign during his election propelled him to power. True to his campaign promises, Muizzu has since adopted policies to distance the Maldives from India and align more closely with china. His administrations's anti-India rhetoric, including derogatory remarks from his ministers, exacerbated tensions. This antagonistic stance reached a peak with Muizzu's demand for the withdrawal of the few Indian troops stationed in the Maldives. India's response was measured but firm. The Union Budget for 204-25 reflected a reduction in the financial grant to the Maldives, from Rs 770 crore to Rs 400 crore, signalling displeasure without severing ties. This financial adjustment highlighted India's willingness to engage diplomatically, while making it clear that a change in Maldivian policy could.

The Union Budget for 2024-25 reflected a reflected a full of the control of the strained relations of the control of the control

The repercussions of this strained relationship were tan-gible. Prime Minister Narendra Modi's visit to Lakshadweep sug-gested to tourists

reflected a reduction in the financial grant to the Maldives, from Rs 770

gested to fourists that there were altermative tourist sports in India to those in the Maldives. With Indian tourists constituting a significant portion of the Maldives tourism revenue, the adverse impact on the tourism sector became apparent. In short, the Maldivian government faced the consequences of its anti-India stance, which threatened its primary economic lifeline. Jaishankar's visit was thus a strategic move, and its success underscores the significance of diplomacy in resolving international disputes. During his visit, Jaishankar retterated India's commitment to the Maldives, describing it as a dearer country rather than just a neighbouring one. While no major agreements were announced, several significant Memorandums of Understanding (MoUs) were signed, including intriarivel servants in India and an Indian Line of Credit-assisted water and sewerage project across 28 Maldivian. sisted water and sewerage project across 28 Maldivian islands. The turnaround in relations, as evidenced by these agreements, also demonstrates Muizzu's capacity these agreements, and odmonstrates whitzas capacity to prioritise national interests over personal prejudices. His willingness to engage with India positively indicates a pragmatic shift in Maldivian foreign policy, aligning with the broader objective of strengthening ties for mutual benefit. Jaishankar's successful visit thus marks an extraordinary moment in mending and fortifying the India-Maldives relations.

Food inflation relief overstated

The recent drop in retail food inflation to 5.42% in July, down from 5.86% in June, appears to be a positive development on paper. The Consumer Food Price Index's rise of 2.81% in July, compared to 4.49% in June, further suggests that inflationary pressures might be easing. These statistics theoretically signal an improvement in the inflationary scenario. However, a closer examination reveals a more troubling reality. Pulses and cereals, essential staples in the Indian diet, continue to experience significant inflation, dian diet, continue to experience significant inflation, putting a strain on household budgets. The vegetable patting a strain on noisenoid coages. The vegerages. The vegerages sector, which saw its inflation rate fall to 6.8% in July from an alarming 29.3% in June, still presents challenges. Despite the decline, the base was so high that the reduction in prices has prices also prices also were to remyte sub-

yet to provide sub-stantial relief to the

prohibitively high, many are left with

consumers. Vegetables, crucial for left with limited dietary options, often fiftent in India, as evidenced by political turmoil over onton prices in the past, it even led to the fall of a government in Delhi. The surge in prices during June and July was largely due to disruptions in the supply chain caused by heavy rains, impacting the movement of goods. Consequently, vegetables have become less accessible, especially to the economically weaker sections Consequently, vegetaties made become iess access-ble, especially to the economically weaker sections of society. With palse prices also remaining prohibi-tively high, many are left with limited dietary op-tions, often resorting to a diet consisting primarily of tions, often resorting to a diet consisting primarily of salt and green chilli. Dal-roti is no longer a combina-tion for them. This situation highlights a stark reality: a considerable segment of the population struggles to access protein- and mineral-rich foods. The gov-ernment must recognise and address this issue ur-gently, ensuring that food security and nutritional needs are met for all, especially the most vulnerable. Ignoring this reality could exacerbate the plight of those already facing significant hardships.

What can Bangladesh do to escape the communal straitjacket?

The vulnerable plight of Hindus in Bangladesh has become part of the political football between Hindu nationalists in India and secularists

he recent fall of the Awami League government in Bangladesh had led to considerable social upheaval, noe of the more disturbing elements has been the targeted attacks on minorities, particularly Hindus with Recuters reporting that 200-300 mainly Hindu homes and 18-20 Hindu temples damaged. Predictably the vulnerable plight of Hindus in Bangladesh has become part of the political feotball between Hindu nationalists in India and secularists; with the former seeking to larists; with the former seeking to amplify, sometimes through dis-information the scale of attacks and information the scale of attacks and violence against Hindus; while the latter perhaps more alarmingly coming dangerously close to overlooking the real vulnerability of religious minorities in the unrest currently taking place. Both approaches ignore the historical legacy of 5 artition that has left creating conflicts over both land and people as a poisoned chalkee for minorities across all states in the region. This legacy has given the inheritance of what some commentation, like Mahmoud All have termed a "Fearful State" suspicious of any demands of greater representation or auton-omy by minorities within its borders, perceiving them as chal-lenges to its authority and carrying with it the potential for irredentism. Such states have invariably engaged in a centralised and bureaucratic top-down project of nation-building that places a great emphasis on ho-mogeneity. Combined with a society that is increasingly more prone unajoritarian politics and religious as well as ethnic nationalism this has created a structural stratikacket for created a structural straitjacket for minorities from which it is difficult to escape. No state or nationalist project within the region has been able to effectively manage relationship with their respective minorities satisfactorily without resorting to marginalisation, exclusion, and occasionally violent repression.

casionally violent repression.

Ever present as a reminder of the painful wounds that accompanied Partition and secession; religious and ethnic minorities serve as a reminder of the incompleteness of nation-building projects that rely on najority religious and ethnic national identities rather than a pluralist, liberal democratic framework. Their very presence is a constant source of suspicion or fear and minorities pay the price for the anxieties of the majority in this re-

gard. They form the convenient 'in-ternal Other' that acts as a lightening rod for right-wing religious nation-alist movements and parties, mak-ing them easy scapegoats that are the first to suffer for thwarted aspix-ations and political frustrations. One of the most frequently cited arguments is the fact that several Hindu temples were defended by local Muslims from potential rioters as a response to accusations that many had been attacked, the prob-lem with this line of argument is sev-eral-fold. Firstly, it is a response not the only response, while laudable the only response, while laudable and a very powerful symbolic act, it cannot be properly assessed without contextualising it within the broader contextualising it within the broader pattern of violence that has octured; as given that over 200 minority establishments have been attacked, it is clear that not every minority place of worship or establishment can be so protected and in many locales, there will be no defenders forthcoming to play such a role. Secondly, such voluntarism in uself cannot be a substitute for institutionalised action by a professional dedicated force, usually the police, for effective democratic politics to function, the state does need to fulfil to role as having the sole monopoly on legitimate violence, in the ab-

sence of which social conflict can no longer be resolved through agonistic political competition and will instead spill over into direct violence. It's worth noting that throughout the bistory of communal rioting in South Asia, from the 1920s onwards there have always been instances where members from different religious communities have protected and sheltered each other; unformately, during a large-scale conflagration this has not proved a sufficient bulwark to prevent sustantial loss of life and property. The state alone through its institutions has the resources and the range of stantial loss of life and property. The state alone through its institutions has the resources and the range of coverage to be able to provide an ef-fective maintenance of law and order in this respect. It's ability to do so moreover, is crucially linked to the perception of security that mi-norities will have, as in its absence, despite the goodwill of neighbour and friends, such fears of vulnerabi-ity will be heightened removing a crucial pillar guaranteeing safety to minority communities. Civil society actions will inevitably be only a tem-porary and ad hoc solution to the problem of violent disorder; unless they are part of a broader and or-ganised social and political mobilisa-tion; something akin to the large demonstrations being held in major

Western capitals such as London, protesting the war in Gaza, which have numbered in their tens of thousands and been consistently turning out on a near weekly basis to put pressure on the British government for a ceasefire. Another example would be the mass anti-racist demonstrations held last week following several days of rioting in English cities and towns over the issue of refugees and race, that threatened to neutil many urban centres; it was engulf many urban centres; it was the impressive turn out of these anti-racist demonstrations, more than any decisive action by the state or police, that dampened the nar-rative which was that there was large unrest over uncontrolled imlarge unrest over uncontrolled in-migration and hosting of refugees, which if not addressed would spiral out of control. However, these were peaceful mobilisations which is what made them effective politically, they were not combative ones de-signed to prevent violence from breaking out.

The 'love jihad' bogey is trumpedup and needs to be done away with

It is time Opposition parties and the public at large press the Supreme Court to do away with this horrendous and misogynistic law

complaint had to be filed in the pres ence of the victim, parents or sib-lings but now the scope has been

widened.
During the three years that the
"love jihad" Act was being implemented, most of the complaints
were made by right wing activists or
else by members of the Hindutya

else by members of the Hindurus brigade putting pressure on hapless parents to file complaints against their daughters.

This amendment was pushed through hurriedly and no rocket science is required to surmise that chief minister Vogl Adityanath is the leay architect behind it. Yog's chief ministership has been marked by in-creasing vigilantism and moral po-licing and this amendment is a continuation of that diktat.

Houses being broken down by buildozers, encounter killings, people being jailed and beaten up

for protesting against the Citizenship Amendment Act. His moral policing sets him at par with the
Taliban. His most recent piece of obscurantism was the directive that all
eateries in UP and Uttarakhand
along the route of the Kanwar yatra
display the names of the owners.
The order was struck down by the
Supreme Court which found it
highly discriminatory against the
Muslim community.
After the Lok Sabha election, Adityanath is fighting with his back to

After the Lox Sabha election, Adi-tyanath is fighting with his back to the wall to remain in power. The BLP in UP is a divided house and a grow-ing list of his opponents are working overtime to oust him. The CM's ap-peal has always been to the hardline Hindurus brigade, and introducing his amondoset is continuition of this amendment is a continuation of this vote bank policy. The ostensible reason being given

The ostensible reason being given for this amendment as that the UP state government is apprehensive of some 'foreign and anti-national elements who are determined to bring about a demographic change' by unlawfully converting thousands of guilblibe Hindu women to the Musilim faith through the promise of marriage. State government data claims to reveal 427 such cases during the last three years.

Journalists Sceenivasan Jain, Martiam Alavi and Supriya Sharma in their book Love Jihad and Other Fic-

tions: Simple Facts To Counter Virul Falsehoods documented Just how many cases of love Jihad have taken place in the last nine years. They found that the VHP had catalogued 36 cases of alleged identity deception but these remained unproven. tion but these remained unproven. The police on the other hand had been found to include cases of fraud blackmail, intimidation, rape and murder under the category of love

Jihad.

Can 36 unproven allegations be requisite proof that points to some large scale conspiracy to after the religious demography of 1.4 billion people?

Just prior to Adityanath making his move, came a highly significant judgement on "love jihad" which went practically unnoticed. A sessions court in Uttarkashi pre-sided by Judge Gurubalcsh Singh acsided by Judge Gurubalesh Singh acquitted the two accused, Owald Kned and his friend Meendra Saint in what had become a highly publicised case of love jihad. The two had been charged with abducting a minor girl on May 26 2001 in Purola with the intent of forcing her to charge her religion and "marry" her.

Pollowing the course of 10 sittings in court, the girl broise down and admitted before the judge that she had been tutored by the police into accusing these two men of forcibly abducting her in order to take her

from Purola to the nearby town of Naugaon. She admitted that she had merely asked the two men for directions to a tailor's shop and they had agreed to show her where the shop was located. Her uncle, under pressure from the police, also pressed charges of kidnapping with attempt to elope which he too was unable to substantiate before the court of law. These accusations had seen the town of Purola break into an anti-musilim frenzy last year forcing 41 families to relocate to different parts of Uttarakhand. It saw both Uvald Khan and Saini, who the VHP accused of being jihadis, being put into jail for over 14 months. Both men have been released from jail but no questions have been asked from the police or the Hindutya brigade about their role in whipping up this anti-Muslim hysteria.

about their role in whipping up this anti-Muslim hysteria. The hurriedly-pushed-through Prohibition of Unlawful Convenion of Religion Ordinance (low jihad law) in 2020 was strongly criticised by several judges who point out that it is violative of Article 14 (Right to grouplity), is (Prohibition of discrimination on grounds of religion), 21 (Right to life) and 25 (Freedom of conscience). Undeterred by such criticism, BJP-ruled states of Himschal Pradesh, Uttarakhand, Gujarat and

legislation. It must now be seen whether these states are going to fol-low suit in introducing this harsher

low suit in introducing, we version.

None of the arrests made under it have been able to stand the test of law. To cite some examples: An interfath couple living in Etah district in UP saw the wife, Ayushi Pachauri, voluntarily admitting to becoming a Muslim. She had her Delh-based lawyer prepare an affidavit attesting that she had voluntarily converted to become a Muslim. She had the foresight to send a copy of this affidavit as a copy of this affidavit. sight to send a copy of this affidavit to the SSP and SHO of Jalesar in Etah district and also to the National Commission of Women.

victed even one person under this ordinance, leading the Aliahabad High Court in a two-bench judge right court in a two-bench judge-ment in 2021 to issue strictures em-phasising that the Constitution guarantees couples freedom to marry according to their choice. It is time Opposition parties and the public at large press the Su-preme Court to do away with this horrendous and misogynistic law.

In UP, the courts have not con

communication, enter-tainment, education and data sharing. But con-sidering health compli-cations due to excess use of smartphones, it is crucial to find appropriate ways of skipping the screen where possible. Of course, it is hard to avoid screens, but still avoid screens, but still we all can adhere to these simple steps to get rid of excess screen obsession for unnecessarily reels, videos and posts.

1. Limit the applications we use online. The fewer the apps to scroll, the

happier you will be. 2. Charge your phone, when your battery is a most point to dismost going to die.
3. Take short music listening breaks, instead of for instagram realfor instagram reels. 4. Set a timer for every application you use, for example a 15-minute timer for instagram or YouTube. We can squeeze the screen time on our own, if we really wish to. Our time is our most precious asset. We have to take the respon-sibility to spend it wisely. sibility to spend it wash, Skipping excess screen time is possible, if we di-vert our curious mind. Kirti Wadhawan, Kanpur

MY VIEW | CAFE ECONOMICS

Company dynamism is what we must rely on for job generation

India's prospects of taking the next step up in its income-per-head status may depend crucially on how fast firms can grow

ector at Artha India Research

n a variant of a story that has played out across many locations in recent years, Mumbai last week saw 110,000 women campouts de the Mumbai University sports ground, adjacent to the iconie Wanikhede Stadium. They had come to India's financial capital in the hope of getting one of the 1,237 posts for women police constables in the city.

One common explanation for the rush to bag a government job is the wage premium on offer. A police constables starts her job earning \$30,000 a month, which is far higher than what new employees get on average in cities. The prospect

government job is the wage premium on offer. A police constable starts her job earning \$30,000 amonth, which is far higher than what new employees get on average in cities. The prospect of stable employment is an added incentive. Yet, such a scramble for government employment is also a symptom of the lack of quality jobs in an economy that has otherwise had a good run since the pandemic. A few weeks earlier, nearly 2,000 young aspirants landed outside a hotel in the Gujarat town of Bharuch in the hope of getting one of the 10 jobs on offer. No wage premium was reported here.

The jobs issue has gained political resonance, with state governments promising to increase the number of people they hire and the Central government now providing wage subsidies to companies that take on new employees. Alto fection in an economy has a lot to do with business dynamism—and the policels that either support or hinder! It. The new World Development Report, an annual research publication from the World Bank, has as its focus the middle-income trap, or why most countries stumble after robust economic growth takes them to what the multilateral lender defines a supper middle-income stratus. Only a few, such as South Korea which has an average income of \$30,000 for every citizen, have continued along their high-growth paths to become rich countries turn the prosess the chasm will be a challenge for China right now and for India a decade later. In a background paper written for the World Development Report, Charles Gottleb, Markus Poschke, and Michael Tueting provide informative data on the structure of employment by firm size across various country is scround paper written for the World Development Report, Charles Gottleb, Markus Poschke, and Michael Tueting provide informative data on the structure of employment by firm size across various country is come groups (see chart). The structural transformation hetween lower-middle income countries is especially important for leaden of the countries of the provident of the come countries

middle income countries and upper-middle income countries is especially important for Indian readers, since India is expected to become Indian readers, since India is espected to become an upper middle-income country by the early years of the next decade. The share of workers in medium-sized firms (10-50 employees) does not change much. However, there is a dramatic fall in the share of workers in small firms deste hat hen lo employees and a matching increase in the share of workers in large firms (more than 50 employees). It is no secret that India right now has an employment structure that is heavily skewed towards tiny enterprises that find it difficult to grow. Many of these businesses have been set up as

VIEWS

How employment shifts

As countries get richer, the share of workers in large firms rises—sharply so from the lower-middle to upper-middle income group.

Firm Size	Low	Lower- middle	Upper- middle	High
Large	15	19	40	51
Medium	25	34	30	34
Small	60	52	32	16

acts of distress entrepreneurship because of the lack of adequately paying jobs. India needs dynamic firms to absorb its growing labour force. The new World Bank report shows that what matters is not just firm size, but also the ability to grow. This in turn means that governments seeking to incentivize job creation should screen firms by some metric of value addition rather this tast size.

ist size.

The example of the US is instructive. In that ountry, the average firm grows by a factor of country, the average firm grows by a factor of seven in case it survives for 40 years, Firms in developing countries grow by a factor of less than three in the same time-frame; the average Indian tiny enterprise barely grows at all. The typical Indian startup—think of a local workshop backed by meagre family savings rather than the wannabe meagre family savings rather than the wann nicorn lavishly funded by venture capital—is

by meagre family savings rather than the wannabe unicorn lavishly funded by venture capital—is stagnant over its extended life-cycle. The issue is not just the failure of governments to let inefficient firms exit, but also the tricky issue of why these tny enterprises are started in the first place—as a last resort against personal unemployment, out of necessity rather than business opportunity. There are two important lessons here for policymakers. First, it is young firms rather than small enterprises that drive job creation in an economy, Manish Sabharwal of Teamlesse Services has a neat analogy from the human world. There are firms that are infants who will grow with proper nutrition, and then there are firms that are dwarfs whose stature is limited. Second, government support should be focused on firm dynamism rather than just size. Dynamic firms create jobs, and many of them just shapen to be small.

I them just happen to be small.

The implicit message of the chart on this page is follows. A country can move from low-income to lower middle-income status with minimal changes in its employment structure. People can climb the income ladder by being slightly more productive in their existing jobs. The shift from lower middle-income to upper-middle income status involves a major shift in the employment structure, or the reallocation of labour on a large scale. The best vehicle for this is young and dynamic firms that are keen to take on more workers. Firm dynamism is an underrated issue in the ongoing discussion on how the Indian econ-omy can provide jobs for a growing workforce that aspires to move a head in life. o lower middle-income status with minimal omy can provide jobs for a growin that aspires to move ahead in life.

lympic competitors over 40 are inspiring—and less of a rarity than they used to be. Scientists say athletes with extreme staying power may be that way due to molecular-level advantages. Studying those could further the quest to understand and slow down the ravages of human ageing.

In Paris, the oldest competitors showed up for shooting, table tennis and equestrian events. And there were middle-agers in golf, beach volleyball, cycling, sailing, rowing and fencing, not to mention skateboarding, where 51-year-old Dallas Oberholzer held us spellbound. They all notched clear victories over ageint stereotypes—and maybe even time itself.

Russell Hepple, a professor at the Uni-

maybe even time itself.
Russell Hepple, a professor at the University of Florida, told me he is studying people who ve persisted in sportse even into their 80s and 90s, hoping to get how they do it. There's more funding for studies of centenarians, he said, but he thinks there's more potential benefit in studying subjects with athletic longevity—like Ed Whitlock, who in his 70s ran multiple marathons in under three hours; the people who compete in the Boston Marathon's 80 · category. or the woman who could still sprint. ory; or the woman who could still sprint.

pete in the Boston Marathon's 80-category; or the woman who could still sprint, long-jump and hurl the shot put into her 90s. What he's interested in is not just extending life, but extending life, but extending life, but extending the healthy, highly functional part of life.

Hepple's lead collaborator is his wife Tarija Taivassalo, an associate research professor. He said the project was inspired by her extraordinary father, who has twice won the 80-Boston Marathon. So far, they've collected just a small group of subjects—15 people who are still competitive after age 78. but all of thema rear the world championship level in their age groups. Some of his subjects died in their Jos and 90s, but continued to compete until the last weeks or even days of their lives. In one of their studies, they found that super-agers had an abundance of hundreds of different proteins compared to others. Some of these proteins were already associated with athleite performance, but the role others might play isn't yet known. Eventually, they want to tease out which differences are caused by long-term strenuous workouts and which are genetic gifts that might be possible to copy with drugs. Consider mitochondria—the body's tiny power plants. They have their own DNA and as ort of life of their own -thousands of them live and die inside our cells. Scientists think animals acquired mitochondria from tiny bacteria that invaded early cells and

audiences spellbound.

April developed a symbiotic relationship with us. In recent studies, he said, scientists have found that as people age, the Jose the ability to clean up a metabolic hyproduct called laynarenine—associated with physical and cognitive decline. It's the mitochondria that normally do this critical job.

When the mitochondria are abundant and in working order, people not only have their most precise control between musicles and the brain, said Luigi Ferrucci, a researcher at the National Institute on Aging. "Master athletes are people who maintain harmonic integrity in multiple systems in the body." he said.

Asyou age, the number of mitochondria in your cells declines, but that happens more slowly in people who continue to do stremous exercise. They're able to activate mitochondrial biogenesis. In this process, old mitochondrial die and get cleared for new ones. As we get older, the sentinels that normally Bag malfunctioning mitochondria grow lax, causing us to lose both the quality and quantity of our microscopic power plants. The immune system also starts to malfunction more as we get old. If power plants. The immune system also tarts to malfunction more as we get old. If starts to malfunction more as we get old. If you're over a certain age and sedentary, he said, and you suddenly decide you're going to run for miles, your body will produce a flood of inflammatory cytokines—immune molecules that will make you feel sore the next day. But if you run a little on most days, your baseline level of inflammatory cytokines will drop, along with your risk of chronic disease,

In the future, researchers may find per sonalized drugs that can keep our mito-chondria refreshing themselves and keep inflammation in check. In the meantime, there are too many empty promises. Garry Palmer, who runs a sports per

Garry Palmer, who runs a sports per-formance centre, said the people who sus-ceed in staying in the game for decades find it enjoyable: the idea of "no pain, no gain" should be junked, replaced with listening to your body and knowing when to take a break. Ageing isn't a steady downhill slide. Instead, it offers plenty of opportunities for improvement and growth. Better training and equipment is already allowing Olympians to compete for longer. As scientists learn more, what looks like extreme staying power now might one day start to appear ordinary.

Technology sharing holds the key to digital governance

RAHUL MATTHAN

India's Revolutionary Appr to Data Governance'. His X

n 10 March 1876, Alexander Graham-Bell made the world's first tel-ephone call when he called his assistant, Thomas Augustus Watson, over a copper wire that ran from one room in the house to the next. This one-sided conversation marked the start of a communication revolution that continues to evolve, with steady improvements that have extended the geographical and spatial boundaries within which our conversation stake place. While the first conversation took place between devices connected to each other with a single wire, as more and more house-

between devices connected to each other with a single wire, as more and more households acquired these new-fangled devices, the complexity of connecting each new telephone to every other forced us to invent the telephone exchange, a central switchboard to which all phones were connected, so that one call could be connected to another. But even this was not enough to cater to all the households that wanted to use this new technology. Demand was so high that in the early days of the telecom revolution, multi-

ple homes were often connected in paral-lel—on the same telephone line (colloquially known as a 'party line')—which meant that anytime a call was connected, all phones in that home rang. While talking on the phone, there was nothing to stop anyone else on the party line from picking up another receiver and listening in

and listening in.

The evolution of telecom technology has always relied on continuous scaling—to optimize the extent to which various elements of the technology stak are shared, so as to unlock greater efficiency. This was even more evident in the transition from fixed-line to mobile telephony, when the development of technologies like Frequency Division Multiple Access (FDMA) and Code Division Multiple Access (GDMA) allowed us to conduct multiple simultaneous conversations over the same radio free ous conversations over the same radio fre-quency band by converting them into data packets and then transmitting them together, separated by time slots or spread

togetner, separated by time sorts or spread across sinvase spectrum.

When the Indian government first per-mitted private-sector participation in the mobile telecom industry, it required tele-com companies to build their own infra-structure before enrolling subscribers. This meant they had to erect telecom towers in

strategic locations in the circles they had licences for to ensure that any customer could speak to any other no matter where ere located. And since each circle had more than one telecom operator, multiple cell towers were erected in the same area by different operators

different operators.
The government later liberalized telecom regulations to permit passive infrastructure sharing.
Multiple operators could now install their radio equipment on the same tower so long as quality was not compromised. The regulations continue to be liberalized, with sharing now extended to active infrastructure, such as the antenna, feeder cable, Radio Access Network and

transmission system.
This approach, of progressively sharing core elements of a given technology stack has unfortunately not been universally adopted across all sectors. Take the digital transformation of governance, for example. Much of the investment in this space is in vertically-integrated, full-stack solutions

designed to solve one aspect of governance without any expectation of being able to integrate it with another solution. This is how the vast majority of identity and pay-mentsystems as well as a range of other core government services have been built in the developed work. According to Gartn

India already has technology building blocks that other developing countries could adopt

According to Gartner, the total information-technology spend by governments in 2023 alone was over \$580 billion. If you break this down by country, you willsee that nearly \$500 billion of that amount was spen in the developed world. This means that the remaining 150 or so countries, mostly in the developing world, had just \$80 billion to spend on building the digital government solutions they need. tne ugital government solutions they need.

If all these countries adopt the full-stack approach that the developed world has used, there would simply not be enough money in the world to fund digital governance. If we want to extend the benefits of the engoing digital transformation to parts of the developing world that are lagging, we would need a far more efficient approach. We need to borrow a leaf from our tele-com experience and learn to optimize the use of sharing in the governance space. Instead of full-stack solutions, if we can Instead of full-stack solutions, it we can build governance solutions with reusable building blocks, we should be able to assemble a variety of solutions across a number of different sectors at a radically lower cost. This is the only way to bring a digital transformation to the countries that most urgently need it in order to accelerated their development.

ed their development. Thankfully, we already know how to

All of India's digital public infrastructure All of Indus suggital public infrastructure has been built using modular, reusable building blocks, and it should be possible for other countries to leverage that experi-

for other countries to leverage that experi-ence in their own context.

The first step in this direction, however, would be for funding organizations to com-mit to only fund digital governance projects that adopt the principle of reusability. Pro-jects must not develop a new technology when other building blocks that serve the same purpose exist, and, if no such tech building blocks exist, they should commit that any new one they build will be made available for subsequent reuse.

MY VIEW | ON THE OTHER HAND

An economic lesson from a visit to the Bank of England Museum It ought to exhibit the roles of Newton and Gresham to explain how bad money drives out the good

n 21 July, I visited the Bank of England Museum in London. It was an interesting and an engaging experience. Nonetheless, I was left wanting more, simply because

was left wanting more, simply because I thought the museum would be more about the history of money than about who did what at the Bank of Enghadisnice its establishment in 1694.

Two gentlemen who should have found a mention in the museum with the found a mention in the museum with the sex shibits are Issae Newton and Though Gresham, both intricately linked to how money has evolved over the years. Newton, other than playing a key role in the scientific revolution, was also the Master of the Royal Mint from 1699

now money has evoces over the years. Newton, other than playing a key role in the scientific revolution, was also the Master of the Koyal Mint from 1699 until his death in 1727. In 1717, as Master of the Mint, Newton made a decision which ensured that gold became lengthard's money, with the country gradually moving towards the gold standard, under which paper money was backed up by gold stored in vaults, Interestingly, as the British Empire expanded, other countries thought the gold standard was one of the reasons behind that success and gradually started moving towards it. Thomas Gresham was a financial advisor to Queen Elizabeth I, who ruled from 1558 to 1603. When she became

the queen, rulers over the centuries had whose face value was more than the amount of precious metal in them, Further, these rulers insisted that a debased coin with lower metal content was worth the same as a whole one with full metal content. This meant that citizens were expected to ignore the precious metal content of a coin and just look at

This led to a peculiar situation where This led to a peculiar situation where he good coine—whose metal content was equal to their face value—were boarded, resulting in their vanishing from circulation. The bad coins, which had less metal content, were used for transactions within the country. Elizabeth I wanted to correct this anomaly and sisse new silver coins whose face value would be equal to the amount of metal in them. Gresham warned her that bad money would drive out good money, meaning that people

out good money, meaning that people would stash away the newer coins for their metal content and continue trans acting in old coins. This came to be

their metal content and continue trans-acting in old coins. This came to be referred to as Gresham's Law. So, how is this bit of history relevant to the world that we live in? Through the 20th century, as democracy became the noring floshly, the link between paper money and gold broke down. Now we have flat money, where money in a really backed by anything except a flat which says that money is worth what the government says it is. Fiat money shat a money is worth what the government says it is. Fiat money salso lets central banks create more money out of thin air by simply printing it or creating it digitally. In the past, when gold backed money, it wasn't very easy for central banks to create money out of thin air because there was always the danger of people wanting their paper money converted into gold. And central banks did not have unlimited access to the yellow metal, which was and remains scarce. Indeed, central banks on ware not held back by this dynamic and can cre-ate any amount of money they want to. It's only the fear of high inflation that holds them back. The central banks of the Western world and Japan printed a lot of money in the aftermath of the financial crisis of 2008, first to rescue

lot of money in the aftermath of the financial crisis of 2008, first to rescue

financial institutions and then to drive down interest rates in order to encourage individuals and firms to borrow and spend more. Something similar happened on a bigger scale after the covid pandemic broke out in 2020.

This is where the current day version of Gresham's Law comes into play. As too much of Pad' flat money was created, individuals exchanged if for what they thought is 'good' money stocks, real estate, artworks, gold, jewellery, high-end cars, famcy watches, etc. Younger investors even looked at crypto tokens as a form of good money. From March 2022, the US Federal Reserve has been gradually sucking out the money it had printed and pumped. Up until early August, it had managed to suck out close to \$l.8 trillion. So, now all eyes are on the other big central bank,

suck out close to \$1.8 trillion. So, nowall eyes are on the other big central bank, the Bank of Japan, which recently raised interest rates. But the question is when will it start sucking out all the money it created out of thin air?

Now, that remains a hierarchy for the

when will it start sucking out all the money it created out of thin ait?

Now, that remains a big worry for the global investor ecosystem, given that low interest rates in Japan have encouraged big financial investors to borrow in yea and invest in other parts of the world in search of higher returns. If interest rates in Japan start going up, this carry trade will have to unwind, sending global financial markets, everything from stocks to cryptos, into a tail-spin. The US Fed has already been withdrawing printed money and is likely to continue doings o. And that, in turn, can create a slowdown or a recessionary environment, which central banks will have to deal with all over again.

To conclude, this is not a call for the world to go back to the gold standard or any other similar system. Nonetheless, central banks do need to go easy on the idea of creating money out of thin air, and not go berserk as they seem to have in recent years, because that has consequences which they are not in a position to control. Oh, and the Bank of England Museum needs to have Isaa Newton's

to control. Oh, and the Bank of England Museum needs to have Isaac Newto role among its exhibits.

Keep pace with today's Al-equipped arms race

As US-China rivalry heats up, sneaky drones and hypersonic missiles are blazing trails we cannot ignore. To defend India's strategic autonomy, our weaponry must keep up-sensibly

nnocuous news from China shouldn't make anyone sit up, but any technological edge it gains over the West in the Cold War II that's underway should. On Sunday, China test-flew a large unmanned aircraft—or drone—with a payload capacity of 2 tonnes. It's just a cargo carrier, developed by the state-funded Sichuan Tengden Sci-Tech Innovation Company, but it is bigger than the four-seater Cessna-172. A separate Chinese firm aims to rival this drone, at least on size, and yet another is looking to fly passenger drones. What makes pilotless planes buzzy in defence circles, how-ever, is the unseen stuff behind the show: digital guidance via a live data-feed. Military mavens speak of such technology as a revolution in war-fare, an early example of which were stirrups hanging from saddles that once gave horseback warriors a spatial advantage. Drones have been deployed in both the Ukraine and Gaza wars, as well as the Red Sea hostilities. The barrage of projectiles launched by Iran and its proxy militia Hizbullah against Israel this April was a mix of missiles and drones. While almost all were intercepted, combat experts have warned of warhead carriers that may be too sneaky to detect and neutralize. And on this front, China

seems to be ahead of the US-led West. The Cold War nightmare was about nuclear tipped ballistic missiles that can blast off the upped banistic missies that can base on the planet and re-enter the atmosphere to strike a target across oceans. This projectile technology has been mastered by spacefarers, a club that includes India. But the booster phase of such a launch generates enough heat and light to render it detectable, and even if it's hard to track once fired, it follows a preset path. In contrast, cruise missiles that fly low are sneakier but slower. Today's Cold War II era of digitally

guided drones, however, is evolving towards blended weapons that push the frontiers of speed, agility and path deception. In recent years, hypersonic gliders have blazed a trail except that they aim to ensure neither their blaze nor trail is spotted by an adversary. The sophistication of China's latest hypersonic glide vehicles (HGVs), like its DF-ZF, has alarmed the US and driven it to scramble a response. Since software is a key differentiator, artificial intelli-gence (AI) may pick the winner of this arms gence (An) may pick the winder of missarins race, even though the idea of any command that leaves humans out of its loop is a moral affront. Where does all this action leave India? By one

thesis, an age of hi-tech threats would make geo-strategic neutrality difficult to sustain as the US-China rivalry heats up to propel them both forth, with neither side ready to cover us under its defence dome without New Delhi signing up as a subordinate ally. If the going gets tough, as it could in time to come, given Beijing's ambitions of power projection, our neutral stance might put us in a tight spot. As a matter of national resolve, though, we have kept any breach of Indian autonomy off the table of alliance talks. This means we must play catch-up on weaponry. Recently, an Agni-5 test of a missile with multiple warheads placed India in a league of powers with only the US, UK, Rus-sia, China and France as members, Clearly, our top brass wants to keep up with other powers. But as AI-enabled drones and HGVs emerge as whizzy new threats, we'll need to leap ahead. Yet, we must not let enlarged defence outlays get the better of sound economic policies. China risks slipping into a middle-income trap. So does India. To avert such an outcome, we must focus on the quality of people's lives, not just the inequity of power gaps.

Fool's gold: Olympics held up a mirror to the country

RAGHU RAMAN

fellow at Observer Resear Foundation and author of

few grams of gold can elevate or depress anation's morele and stature, But first, why should any nation spend money on sports, especially one whose popu-lation substantially relies on subsidies? Nations invest in sports for three strategic reasons. The first is global positioning, Sports are surrogates of warfare and derived from combat. Think of shouting, archery, javelin and discus throws, fencing, boxing and of course wrestling.

javelin and discus throws, fencing, boxing and of course wrestling.

The Olympic Games have always been a surrogate battleground for global power jockeying, Recall Berlin, 1936, where African-American Jesseo Weens demolished Hitler's 'Aryan supremacy' delusion, beating every Caucasian athlete in four different events in the dictator's own backyard.

In 1980, geopolitical tension between superpowers spilled over to sports when the US boycotted the Moscow Olympics, protesting the Soviet invasion of Afghanistan. In retallation, the Soviet Union Doycotted the 1984 Los Angeles Games, The blood, sweat

and dreams of hundreds of athletes who had nothing to do with political ideologies were wasted by leaders playing their own games. Own jies also project a nation's overall might. The Usheld pole position from 1918 to 1972, until the Soviet Union caught up in the 1972 Munich Olympics and crushed its rival decisively in the Montreal games. The Soviet Union maintained its medal dominance till 1992, after which China began its global ascent. And despite India's pride in every medal won and admiration for every athlete, our meagre taily of about 4.0 medals won so far, while China bagged 90 in Paris alone, reflects the country's position.

The second reason is national health. Well implemented, every rupee invested to sports.

in plemented, every rupee invested in sports delivers exponential benefits in terms of physical, mental and social health. Sports at sroot levels can ensure a healthier 'nex grassroot levels can ensure a healthier 'next generation,' saving on opportunity costs and medical expenses while fending off untold misery. It is proven that youth engaged in sports are not just healthier and more productive citizens, but also less likely to fall prey to temptations like substance abuse. So it san investment in human capital.

But if medals alone become the yardstick of success, then the tail wags the dog. The euphoria of one odd victory hides hard

truths about the efficacy of our sporting establishment, condition of athletes and the accountability of official entourages accompanying sportspersons. No one challenges the relevance of politicians and bureaucrats who seem to wield official, semi-official or surrogate influence over every federation or association for each sport with little transparency or accountability for the use of taxpayers' money. With an alarming proportion of our population undernourished and many of our urban youth living in the world's worst polluted cities, it is hard to see us leveraging sports as a 'health eraging sports as a 'health investment plan' for the

won by India between the Berlin and Tokyo Games, 24, or two-thirds, were in individual events. Barring hockey, our 'medal mindset' has created individual gladiators rather than teams, thus undermining the team-work pur-

teams, thus undermining the team-work purpose of national investment in sports.
And as for wrestler Vinesh Phogat, bere is a story she and millions of her farm singht find solace in. Forty years ago, the Los Angeles Games witnessed one of the most controversial and memorable moments in Olympic history. American Mary Decker was the hot favouries a sense it to win the women's 3.000-metres race being The Games are a test of mettle over metal and India's showing reflects a sense of duty to future 3,000-metres race being heldforthe first time. With

investment plan: for the next generation.

The third reason is inculcation of sportsman spirit and camaraderie. "The battle of Waterloo was won in the playing fields of Eton." goes a British saying that refers to a famous boarding school. This is about sports as builder of midvidual and team character. This is why there is such emphasis on sports in millitary training. And here again lies the irony of our sports strategy. Of the 32 medias

entire drympics, and specifically the victory of Maricica Puica, who won the gold medal. Although she had clocked in faster than Decker in the qualifying heats, her victory was widely perceived to be the result of Decker drympics.

was widely perceived to be the result of Decker's drop-out.

Amid all the blame-shifting and arguments over Phogat, the ironic symbolism being missed is that the Olympic gold medal is actually made of silver, with just about 1% gold ion account of gold-plating. The value of the medal never lay in the metal. It was and will always be in the warrior's mettle.

Abhimanyu is immortalized as one of the greatest warriors ever, even though legend has him losing his last battle. His six slayers fell from reverence to eternal shame for their cowardice and wiles, even though they won't.

fell from reverence to eternal shame for their cowardice and wiles, even though they won't he fight. We don't need a medal to remind us who won and who lost, Phogat's loss of that piece of metal is just another one of the misfortunes that life threv at her. Her grappling days aren't over and we wish her well. As for a nation that spends crores on jamborees and is reputed to hold the world's largest private stash of gold, the inability to lift even king grams off to na global stage tells us where we stand in our responsibility to the next generation. Neither faster, nor stronger or higher. And, sadly, not even together.

Clouds gather over peace talks

Iran's threat of retaliation and Israel's continued brinkmanship could derail talks set to begin again on Thursday

possible Iranian retaliation against Israel for the killing of Hamas and Hezbollah leaders could have severe ramifications for A negotiations on a ceasefire in Gaza that are expected to resume on Thursday. Iran has already dismissed a call by France, Germany, and the UK not dismissed a call by France, Germany, and the UK not to go ahead with its threat, adding to concerns about an escalation of the Israel-Hamas conflict that began more than ten months ago. Egypt, Qatar and the US, which have been mediating the discussions between Hamas and Israel, have indicated they intend to present a "final bridging proposal" at the upcoming negotiations to reach a ceasefire in Gaza, where the death toll is inching towards 40,000 though several studies have pointed to a much higher figure. It is against this backfron that the leaders of France. against this backdrop that the leaders of France. Germany, Italy, the UK and the US issued a joint appeal on Monday that called on Iran to "stand

appeal on Monday that called on Iran to "stand down" its threats of a military attack against Israel and highlighted the "serious consequences for regional security" arising from such a strike. However, the leaders also pledged their support for Israel against Iranian aggression.

The Iranian leadership clearly faces a dilemma; if it gives in to this appeal, it will be perceived as weak, especially after the bombing in Tehran that killed Hamas leader Ismail Hanlyeh at a time when he was a guest of the Iranian State at the inauguration of President Masoud Pezeshkian. A strong response against Israel could set in motion events that can against Israel could set in motion events that can against stract could set in motion events that can lead to a rapid escalation of the conflict. Key western powers such as the US and Germany are perceived as enablers of Israel's immoral onslaught in Gaza, and their position in the current imbrogio has led to frequent accusations of double standards. At the same time, the upcoming negotiations too are under a cloud as both Hamas and Israel have doubled down on their original positions, which resulted in a deadlock in the last few rounds of talks. Some in the Israeli leadership are even attempting to portray this as Hamas's reluctance to agree to a ceasefire. It is as names retructine to agree to a cease fire. It is now becoming clear that the ceasefire negotiations are being stymied and jeopardised by PM Benjamin Netanyahu, whose government continues to engage in provocative actions, ranging from the relentless bombardment of civilians in Gaza to assassination, and the West must do more to convince him to back down and instead work towards a peaceful solution.

Delhi lost water bodies to administrative failure

elhi, among the most water-stressed cities in the world, has lost close to half of the water bodies it officially lists. This summer, when the hottest days saw temperatures rise to almost 50 degree Celsius, the city's struggle with water adequacy was underlined by visuals of women and children running after water tankers even as the Aam Aadmil Party government approached the courts to get neighbouring Haryana to release more water. Against an average daily demand of close to 1,400 million gallons, the city got somewhere between 978 and 938 million gallons per day during between 978 and 938 million gallons per day during the peak heat period of May-June. So, the loss is colossal, and in more ways than one.

It has likely contributed to the unprecedented waterlogging in the Capital this monsoon, given the water bodies would have served as avenues for runoff to collect. And water bodies play a crucial role in moderating the city's micro-climate, recharging surrounding aquifers and protecting biodiversity.

For a city that is almost entirely dependent on neighbours for water, losing close to half of its water bodies to encroachment and other factors points at abject administrative failure. Indeed, over the past decade or so, there have been several reports of the Capital's water bodies being converted into unauthorised settlements, dump yards, even a hospital. Delhi has yet to notify a single wetland hospital. Delhi has yet to notify a single wetland seven years after the Union government made this mandatory for all states and Union Territories.

The fact that the Wetland Authority of Delhi has met only five times since it was set up in 2019 — last in September 2021 — indicates alarming inertia in the face of growing water insecurity. Whether assigning monitoring duties to a clutch of officers, as is being proposed can protect Publis remaining water. proposed, can protect Delhi's remaining water bodies remains to be seen.

How sub-quotas queer affirmative-action pitch

The Supreme Court's decision green-lighting SC/ST sub-quotas and a secondary call to enforce creamy layer exclusions hold the potential to upend a settled but imperfect compact

twas autumn BZA. A tornado of protests against a commission led by British advocate John Simon was sweeping the still-British colory of India. Delying the groundswell led by the ladian National Congress, a 75-year-old burrister reached Pune to give his statement in front of the seven-member panel. Dr BR Ambedicar's statement pushed back against the demand that the all-British panel brought of the seven-member panel. Dr BR Ambedicar's statement pushed back against the demand that the all-British panel brough a statement pushed back against the demand that the all-British panel brough a statement pushed back against the demand that the all-British panel brough a statement pushed back against the demand that the all-British panel brough a statement pushed by the seven and the statement of the demand as a statement of the demand dismarding a string of objections to special quotas on questions of enable service examinations, he said. The system of competitive examination relied upon may result in fairness all casters and creeds. But those circumsances presuppose that the ductional systems of the State is sufficiently and merity of the state is sufficiently of the state is sufficiently and the state of the us autumn 1928. A tornado of

rely upon the results of competitive examination is to practice a delusion upon them.

Hidden in this were the first echoes of his arguments later in the Constituent Assembly. In the 80-odd years since, reservation systems evolved, expanded and were reshaped. Yet in this charm, the policy for Scheduled Castes EQ and Scheduled Tribes [87] longely remained insuct, courtery their affirmations in the Committee of the Assembly of the Scheduled Tribes [87] longely remained insuct, courtery their affirmations in the Committee of the Assembly of the Scheduled Castes EQ and Scheduled Tribes [87] longely remained insuct, courtery their affirmations in the Committee of the Assembly of the Scheduled Tribes [87] longely remained in the Castes of the Scheduled Castes (1984) and the Scheduled Castes (1984) and the Scheduled Insurance Tribes held true whether in the Assembly of the Castes of the Caste

clectoral expediency but also because Dalits could exercise more power through the one-person-one-vote system (another of Armbeddar's Simon Commission recommendations) than through access-barrierd institutions such as civil society, media and the judiciary. Over the last decade, similarly, the politics of sub-custs burst to the fore in the electional arena, bussing the myth of a homogenous Dalit wate as the BJF successfully elecanes to the fore in the electional arena, bussing the myth of a homogenous Dalit wate as the BJF successfully elecanes of the top of the comparison to beat it at the game in 2024.

What happens now? For the Opposition to beat it at the game in 2024.

What happens now? For decades, smaller SC, groups such as Madigas in erstwhile the comparison to upper castes the comparison to upper castes but also some of their SC brethren. The demand for local internal quotas emanates from there, but also creates reciprocal anxieties among larger SC groups that political parties will use quotas to exploit fractures in the Dalit communities for first-past-rhe-post wins. At a time when Dalit people, irrespective of their economic standing or social stants, face-tiff caste barriers and are often at the receiving end of volence for their surmance standing or social stants, face-tiff caste barriers and are often at the receiving end of volence for their surmance standing or social stants, face-tiff caste barriers and are often at the receiving end of volence for their surmance standing or social stants, face-tiff caste barriers and are often at the receiving end of volence for their surmance standing or social stants, face-tiff caste barriers and are often at the receiving end of volence for their surmance standing or social stants, face-tiff caste barriers and are often at the receiving end of volence for their surmance standing or social stants, face-tiff caste barriers and are often at the receiving end of volence for their surmance standing or social stants, face-tiff caste barriers and are often at the dering by parties to dominant groups demanding quotas—either appossing influential groups like in Maharsehtra or Haryana. or holding hack survey data to mollify rivalling but powerful groups as in Karnataka—and it is clear why this is a fraught moment. Verdicts calling for a gradual end to reservations or instituting income

Dr Ambedkar championed a view wit used to level the playing field after ce exclusions fan this anxiety. If reservations have performed sub-optimally, a large chunk of the biame must lie with the diffident implementation to young people trying to get certificates, segregates them in clussrooms, playgrounds and wortplaces, and allows tens of thousands of vocancies in positions ranging from universities in positions ranging from universities in positions ranging from universities utilities, therefore, the problem of smaller SC groups isn't bigger groups cornering benefits but something deeper in the caste-based political economy. Without granular data that the regular census doesn't have, and only a caste census can, it will be difficult to make those calls.

Against this backdrop of perricious caste discrimination, income exclusions suggests that economic mobility ends caste bias, while empirical evidence shows that caste only morphis its shape without losing its bith. Action of the incomplete in the control of the problem of the control of the communities, but only in intergenerational mobility precarious for these communities, but reconomic assertion can invite sharp new forms of violence. Thirth of appriational Dalit men being attacked for uploading photographs on social media or ricking a horse or a motorbike, and the logic of creamy layer exclusions can begin to unravel.

At the core of this churn are two contrasting world-views, One look at reservations as a bitter palliative that the State is swallowing for a limited

eriod of time. Here, quotas have little unction beyond economic, and

period of time. Here, quotas have little function beyond economic, and, herefore, there is no reason to nucture them and every motivation to therefore, there is no reason to nucture them and every motivation to white them down for the sake of efficiency and merit. As a result, there is no difference seen between OBC and SCST quotas. Many judges and politicains, including some former PMs, appear to adhere to this view.

The alternative view, championed by Dr. Ambedlar, sees reservations not as an economic lever but a social one, used to level the playing field after centuries of oppression. These constitutional guarantices of equality and are controlled to the design and the control of th

road ahead will be determined by how sub-quotas play out — whether they help downtrodden SC groups, or undermine Dalit unity without any meaningful improvement in their conditions, as some fear. It's too early to call the verdict a landmark

Remembrance as healing: Memorialising Partition

46 It is important to join the many that desire for mankind never to forget now and in the future, what took place. This poignant quote associated with the Holocaust reasonates deeply when we consider two of the most devents, occurring within a few years of each other, resulted in unimaginable suffering, mass displacement, and millions of lives lost. Yet, the way these tragedles are remembered and memorialised differs significantly.

The Holocaust is extensively document and memorialised differs a significantly.

The Holocaust is extensively document and memorialised. Molocaust museums exist worldwide, with the United States Holocaust Memorial Masseum in Wassimgton DC and Yad Vashem in Jeruselme being among the most promiser. These institutions serve not only as remosition, the discount of the Holocaust Schortvers are never forgotten.

In stark contrast, the Partition of India, which resulted in the displacement of approximately 20 million, the contrast, the Partition of India, which resulted in the displacement of approximately 20 million, the partition of the Holocaust of the Contrast of the Contrast of the Contrast of the Holocaust of the Contrast of the Contrast of the Contrast of the Holocaust of the Contrast of the Contr

rvent.
This disparity in memorialisation raises riftical questions about historical memory and its importance. Why is it crucial to remember the horrors of Partition with the tame intensity as we remember the Holo-ower?

same intensity as we cenember the Holo-caust?

Firstly, memorialisation serves as a pow-erful soel for education and prevention. By documenting and presenting the events of the Partition, we can help future generations understand the devastating consequences of religious and enthic divisions. The formation of nations based on religious identity, as seen in the creation of Palsistan and, later, Bangla-desth, has led to ongoing conflicts and insta-hilities. A comprehensive Partition muscum could serve as a stark reminder of the perils of such divisite ideologies. Secondly, remembering the Partition is crucial for healing and reconciliation. Many survivors and their descendants still bear the trauma of this event. Acknowledging their experiences through official memorialisa-ciouste, potentially easing long-standing ten-sions between communities. Thirdly, a detailed record of the Partition is essential for historical accuracy and understanding. The lack of a comprehensive MANY COUNTRIES HAVE

MANY COUNTRIES HAVE DEMONSTRATED THAT FACING HISTORICAL TRAUMAS ALLOWS SOCIETIES TO MAKE

lived through the Partition but also limits our ability to learn from this pivotal amoment in history.

Lastly, comparing the memorialisation of the Holocauss and the Partition highlights the often uneven approach to historical memory on a global scale. While the Holocauss Impact on western confectiouses had a consistent of the control of the contro

opportunity to learn, reconcise, and move forward.

properly advanced to the control of the cont

history head-on is a sign or a mattering democracy.
While the Holocaust and the Partition of India were distinct events with their own unique contexts, both represent grave human suffering in the 20th century.
The comprehensive memorialisation of the Holocaust serves as a model for how we might approach the remembrance of the Partition. By creating spaces for education, reflection, and reconciliation, we can ensure that the lessons of these tragedies are not lost in time.

How India must respond to the crisis in Bangladesh

The full of Sheikh Hasina's government in Bangladesh presents India with a complex diploratiot and strategic challenge. With the shift in the political landscape of Bangladesh, India must ravigate a new reality, balancing its historical alliances with evolving dynamics. This crisis underscores the delicate interplay of regional politics, international interests, and the implications for India's own strategic interests.

Rasina's 15-year tenure a Prime Minister (Ph) of Bangladesh endel abruphy smil escalating protests and violence. What begin a strategic interests and violence. What begin a fulling on the controversial quota system quickly spiralled into a bruded anti-pover-ment movement. Hasina's administration responded with crackdowns, leading to significant loss of life and intensification of the unrest. The upheaval revealed the vulnerabilities of Hasina's long-standing rule. Begin and the state of the state of

and could potentially seek her extradition from India. And, any attempt to wash its hanc off Hasina could influence other regional lead-ers who have traditionally aligned with India potentially leading them to question the relia bility of Indian autonot.

off Harina could influence other regional lead-ers who have radiionally aligned with India, potentially leading them to question the relia-bility of Indian support.

The geopolitical implications of this crisis go beyond immediate bilateral concerns. Bangladesh's strategic position and its ties with China add significant complexity to the situation. China has been a key defence sup-plier to Bangladesh, providing submarines, warships, and support for a new naval base designed to accommodate substantial naval assets. Additionally, China has extended a considerable amount of Jonas to Bangladesh. The potential for increased Chinese leverage and Bangladesh spossible use of this relationship to counterbalance India necessitates a careful approach.

In the complete of the providence of the most of rangage with the caretaker govern-ment or an eventually elected one proves less friendly, India must convey its red lines and ensure that its interests are safe-guarded.

proves less briendly, findia mist convey its red lines and ensure that its interests are safe-guarded.

Potential humanitarian issues, such as a refugee influx resulting from the violence against minorities in Bangladesh, could strain India's resources and domestic stability, india has pressed the new government of comtain the violence, II should also work to prevent violence against Aventi League leaders and the control of the safe they are the safe that the safe that has been added to the safe that the safe that

An overview of governance in Delhi

Why is there constant tension and friction between the Union government and the Delhi government? What did the 1989 Balakrishan committee recommend? How has the Municipal Corporation of Delhi been involved in the power tussle? What can be done?

EXPLAINER

The story so far:
he Supreme Court has ruled that the Lieutenant Governor (LG) of the National Capital Territory (NCT) of Delhi can nominate 10 aldermen to the Municipal Corporation of Delhi (MCI) on his own without the aid and advice of its council of ministers. This has added to the friction between the Union government, the Delhi government and the local government.

How did Delhi government evolve? At the time of the commencement of the Constitution in 1950, Delhi was a Part C State. During the States reorganisation carried out in 1956, it was made a Union Territory to be governed by an administrator. The MCD was established in 1958, and a limited local government was established since 1966. Subsequently, as per the recommendations of the Balakrishnan committee (1989), the Constitution through the 69th Constitution through the 69th amendment (1991) provided for a Legislative Assembly and council of ministers for the NCT of Delhi. However, the subjects of public order, police and land were excluded from the Delhi government; the Union government has control over them. The Government of NCT of Delhi Act, 1991 contains the detailed provisions relating to its legislature, executive and administration.

What are the issues?

Since 2015, the Union government led by the Bharatiya Janata Party (BJP) and the Delhi government led by Aam Aadmi Party (AAP) have been at loggerheads on various issues. While political differences play a pivotal role in such conflicts, there are also important legal angles. The judgments of the Supreme Court have resulted in amendments to the Government of NCT of Delhi Act that have

der and party supporters stag rainst the Delhi LG on Aveust 3. Av

curtailed the powers of the elected government in Delhi. A brief summary of these developments in the last decade is provided in the above Table. Apart from the issues between the Union and the Delhi government, the MCD with its elected representatives add another dimension to the problem as was witnessed in the recent unfortunate loss of lives due to electrocution and flooding in Delhi. The public at large witnessed the shifting of blame between elected representatives at all three levels.

What can be the way forward?
As part of its judgment in 2023, the
Supreme Court mentioned that there is a
triple chain of accountability in a
democracy. The officials are accountable
to the ministers; the council of ministers
are collectively responsible to the
legislative assembly; and the legislative
assembly members are accountable to the

The Union versus Delhi

Case / Amendment	Brief description	Implication	
Govt of NCT of Delhi vs Union of India (UOI) (2016)	The Delhi High Court ruled that the LG of Delhi exercised complete control of all matters relating to the NCT of Delhi	It made the appointed LG the executive head, reducing the powers of the elected government of Delhi	
Govt of NCT of Delhi vs UOI (2018)	On appeal against the Delhi HC judgment, the Supreme Court held that the LG was bound by the 'aid and advice' of the council of ministers headed by the Chief Minister of Delhi except on matters relating to public order, police and land	This restored the powers of the elected government of the NCT of Delhi in matters of day-to-day administration	
Government of NCT of Delhi (Amendment) Act, 2021	It required the council of ministers to obtain the opinion of the LG before any executive action on matters specified by the LG	This amendment tilted the balance of power again in favour of the LG	
Govt of NCT of Delhi vs UOI	A Constitution Bench of the Supreme Court in May 2023 had held that the Delhi assembly and	This restored the powers of the elected government of the NCT	

powers over 'services' except in relation to publi order, police and land it created the National Capital Civil Service Authority for deciding on matters relating to 'services'. This authority will consist of the Chief Minister, the Chief Secretary and the Home Secretary of Delhi of NCT of D

As part of its judgment in 2023, the Supreme Court mentioned that there is a triple chain of accountability in a democracy. The officials are accountable to the ministers; the council of ministers are responsible to the legislative assembly; and the legislative assembly members are accountable to the people

people. The constant tussle between various layers of government ruptures such a chain of accountability.

The NCT of Delhi is spread over L450 sq kms while the capital of our country New Delhi 'that houses most of the central government offices and foreign embassies is around 50 sq kms. In the U.S., Washington DC which is the capital

district is spread only around 177 square kilometres. A similar approach may be considered where the area in 'New Delhi' of 50-100 square kilometres can be under the complete control of the Central government. The rest of the areas may be brought under the powers of the Delhi assembly. This would require a constitutional amendment after detailed deliberation and consensus. Nevertheless, under the existing set up, the spirit of the judgment of the Supreme Court in 2023 should be honoured.

This would ensure that the people of Delhi get responsible and responsive governance from all three layers of government irrespective of whichever party is in power. district is spread only around 177 square

government from an unive supers of government irrespective of whichever party is in power. Rangarajan. R is a former IAS officer and author of Polity Simplified: He currently trains civil-service aspirants at 'Officers IAS Academy'. Views expressed are

Does India have laws on the movement of ballast water?

How is ballast water facilitating the spread of invasive mussels on the coast near the Kamarajar Port?

M. Kalyanaraman

The story so far: he Tamil Nadu Water Resources Departmen he Tamil Nadu Water
Resources Department (WRD)
has informed the National
Green Tribunal that it has
sought 160 Crore from the Kamarajar
Port in Ennore, Tamil Nadu, to facilitate
the removing of invasive mussels on the
coast near the port in connection with an
ongoing case on the proliferation of
Mytella strigad, or charru mussel that
harms marine ecosystems and hinders
fisher boat movements, affecting their
livelihood. The WRD has charged that
Kamarajar Port is the main reason for the
spread of the invasive species by not
regulating the ballast water from ships.

What is ballast water? Ships need to have a certain level of immersion into the sea to be stable. When a ship discharges cargo, it rises up in the water and therefore, to keep a minimum level of immersion, ship staff take in sea

water called ballast water inside tanks in the ship. And when the ship loads cargo, leading to more immersion, the ballast water is pumped out of the ship. Until recently, there was no bar on taking in and pumping out of ballast water at ports, in the ocean, along the coast and so on. Since ballast water carries invasive species into other countries that destroy ecosystems, global shipping has sought to regulate ballast water discharge. ater called ballast water inside tanks in

How serious is the problem?

In India, scientists have recorded nearly 30 invasive species coming from ship ballast water. Among the most harmful in recent times is the charru mussel, Mytella Rigata, says Biju Kumar, professor and head of the department of aquatic biology and fisheries at the University of Kerala. In the Pulicat lake in Tamil Nadu, as in Ashtamudi lake in Kerala, this mussel has replaced almost all other species, he says. Its survival rate and egg production is very high. Though of marine origin, it can survive even in fresh water, he adds.

What are global regulations?
The Ballast Water Management (BWM)
Convention of the International Maritime
Organization (IMO) came into force in
2017 to help prevent the spread of
potentially harmful aquatic organisms
and pathogens in ships' ballast water.
From September 8, 2017, ships must
manage their ballast water so that aquatic
organisms and pathogens are removed or
rendered harmless before the ballast
water is released in a new location.
Recently constructed ships with
functioning ballast water management
systems continuously take a small portion
of the ballast water they had taken in after
discharge of cargo and dose it with
chemicals so that all the water is rendered
free of any biological organism before the
water is pumped out during the loading of
cargo. Ships built before the BWM
convention that don't have these systems
are required to exchange the ballast water
they took in a port with "neutral" water
from the middle of the oceans enroute to
the loading port.

Among the countries most serious Among the countries most serious about preventing ship ballast water damaging their marine coosystems are Australia and New Zealand. Australia, as a major supplier of coal and iron and other raw materials, sees much ballast water pumping out in ports. Australia is home pumping out in ports. Australia is nome to ecologically sensitive areas such as the Great Barrier Reef where such water can cause immense harm. Ships calling on Australian ports are often subject to rigorous checks including of ballast water magement systems

management systems.

What is India's position?
Documents of the IMO show that as of July 2, 97 countries have signed on to the BWM as contracting states. India is not on the list of countries. This means that there is no obligation on the part of ships calling on Indian ports to enforce the BWM convention. While other rules such as relating to discharge of oil apply in Indian ports, the discharge of ballast water brought in from other countries is not subject to checks or regulation.

"No restriction is seen regarding discharge of ballast water in Indian ports," says V. J. Mathew, senior advocate who specialises in maritime law. In any case, ports are only a facilitator of ship traffic and cannot be held liable in such cases. If there is any evidence that a vessel has pumped out the ballast water that led to the invasive species, then the vessel owner can be held liable if a law is in force, says Mr. Mathew, adding that it is time India signed on to the convention.

...

removal of all of the small number of Indian military personnel stationed in the slands to service Indian supplied helicopters and aircraft for search and res-

cue operations.

He pointedly made his first visit to Turkey and then to China where he signed a slew of agreements seeking to end the island nation's dependent of the control of the con dependence on food imports and healthcare from India. His first meeting with Prime Minister Modi was at the sidelines of the COP28 climate sum the COF28 climate summit in Dubai in December 2023. His first official visit took place in June when he visit-ed New Delhi to attend the swearing-in of PM Modi's

third government. In the past, China h sade major inroads into the Maldives by promoting a range of mega- infrastructure projects and providing liberal aid and loa liberal aid and loans. The big Indian concern is of Chinese maritime activities in the Maldives. A Chinese compa-py has been given the lease of Feydhoo Finolhu island, located close to Male and there have been periodic reports about the sale to Chi-ma of the Geldon island. na of the Gadhoo island, next na of the Gana airport, in the southern part of the country. Indian objections led to the scrapping of plans to build a Joint Ocean Observation Station in its western most atoll of Makunudhoo.

rity first' approach and is willing to engage neighbours through an all-round policy emphasising trade policy emphasising trade and development along with security. In the case of the Maldives, India has, howev-er, taken the precaution of developing a new base in the Minicoy island that is clos-est to the Maldives, and shoring up its naval pres-ence in Lakshadweep. But on a long-term basis

India needs to put serious money and effort into promoney and effort into pro-moting regional integration.
BIMSTEC (Bay of Bengal Initiative for Multi-Sectoral Technical and Economic Cooperation) has not really worked, and the Bangladesh uncertainty makes it less likely that it will do a soon. There is will do so soon. There is a need to go back to SAARC and its South Asian Free Trade Area (SAFTA) project. Trade Area (SAFTA) project.

No doubt this involves even
trickier diplomacy, especially in dealing with Phisistan,
but India needs to look
ahead instead of backwards.
It should be clear by now
that even though India is no that even though India is an island of economic growth its path forward through a stable and see and stability in the region through a stable and se neighbourhood. An is grated South Asian re-provides this option and also be the basis of com-security and prosperity.

Focus on prevention, preparation to blunt impact of disasters

a stable and secure

neighbourhood.

THERE was a per HERE was a per-fect balance among natural resources in the pre-industri-al period that lent stability to the land use system. But this system started giving way in the post-indus rial phase, especially as a result of industrialisation, realt of industrialisation, deforestation and fast-paced development. The resultant climate change has led to an increase in the frequency and intensity of hydrometeorelogi-cal disasters like landslides and cloudbursts in hills, floods in plains and excloses in in plains and cyclones in coastal regions. This year has en catastrophic destruction Himachal Prodesh, Uttanic in Himachal Prudesh, Uttantion hand and Kenila. The situation in the NCR, Mumbai, Pune, Jaipur, etc, is not much differ-ent. There has been a colossal loss of life and property. Thou-sands of people have die-many are missing and several any are missing and severa others have been displaced. Many roads, bridges and dams

Many roads, bridges and dams have been washed away. These disasters are a result of habitations that have been allowed to come up on the natural path of water move-ment and the infrastructure erected below the fixedplain

level. In the hills, fragile earth and rocks have been cut to construct roads and buildings. Mining is being carried out with complete disregard for the recommendations of the Environmen tal Impact Assessment and the Environmental Clear-ance. Forests have been degraded and damaged, reducing their power for water conservation and its smooth movement. Muck generated from construction and infrastructure develop-ment is dumped on the banks of rivers and streams the Environmental Clear banks of rivers and stre to be carried away with flow ing water, further missing the flood level and causing more damage and destruction. The floodgates of storage and run-of-the-river hydro-electric projects are not man-aged responsibly. Local resi-dents and tourists in many places are caught off guard and washed away in flood and washed away in flood ing water, further mising the and washed away in flood waters in the absence of an

The scientific and dynamic The scientific and dynamic National Policy on Disaster Management (NPDM), 2009, offers guidance for the holis-tic and strategic manage-ment of disasters. But what the policy contains is not being followed to the hilt, leading to the destruction leading to the destruction these disasters inflict every year. The disaster manag nuum in the poli ment continuum in the poli-cy is divided into the pre-dis-aster phase of prevention, preparation, early warning, mitigation and risk reduc-tion and the post-disaster stage of response, rescue,

ices are caught off guard by flo

evacuation, relief and reha-bilitation. Most post-disaster needs assessment studies have shown that pre-disaster management is economical ly feasible and advanta-geous. This calls for a relook anagement strategy at the management strategy.

Ensuring an effective response has always been prioritised in disaster management, ignoring the role of pre-disaster steps.

The situation demands better management of these

ter management of these hydrometeorological disasters. The scientific guidelines of the NPDM must be adopt of the NPDM must be adopt-ed. A fully prepared gover-nance system—which priori-tises prevention and adequate preparation— would drastically reduce the loss of life and property. There are standard operating

Although cloudbursts can't be prevented, the resultant floods, flash floods and landslides can be minimised through risk reduction and mitigation steps.

procedures to prepare for all disasters. It is not understood why these are not followed. After all, half of the work is already accomplished if such a system is in place before a disaster strikes. Though the need for a comprehe need for a compression flood forecasting system has been felt, it has still not been developed. The India Meteorological Department and the developed. The India Meteo-rological Department and the Central Water Commission must promptly prepare such an early warning system for river basins, watersheds or dams in collaboration with states and union territories

states and union territories, as per the requirements. Despite the launch of the National Landslide Risk Mitigation Project, there is no sign of an early warning system for predicting land-slides. Doppler radars have

been installed to predict beavy rains and disaster sit-uations, but every year, they fail to deliver when required. And this year was no excep-tion. Only early warning systems developed and installed for cyclones have helped ensure almost no loss helped ensure almost no loss of life and minimum dam-age to property in the affect-ed coastal regions. Although cloudbursts can't be prevented, the resultant floods, flash floods and land-sides — whether in isolation

slides — whether in isolation or in combination — can be minimised by continuously minimised by continuously undertaking effective risk reduction and mitigation measures. A well-managed catchment in hills, through effective watershed management, will make the area stable and the drainage of water smooth, helping prevent or minimise floods and flash floods, checking the damage caused by cloudbursts are caused by cloudbursts and aiding in averting landslides Undertaking construction of buildings and infrastructure buildings and infrastricture away from rivers and streams and above the flood level will reduce the risk and mitigate the impact of floods and flash floods. An efficient and effec-tive management of solid waste and cleaning the drainure systems in towns drainage systems in towns and cities would decrease and even eliminate the accu-mulation of water after

mulation of water after heavy rains or cloudbursts and prevent floods. In case pre-disaster measures fail, there must be fool-proof post-disaster steps in place, namely an efficient and

effective response, evacuation of those affected, housing them in safe places and pro-viding immediate relief. In the worst-case scenario, those affected have to be rehabili affected have to be rehabili-tated and, if required, the damaged infrastructure reconstructed. Inferences from post-disaster needs assessment studies conductassessment studies conducted by various agencies indicuting that the cost of pre-disaster steps is much lower
than that of a post-disaster
response, relief, rehabilitation and reconstruction have
not been taken seriously.

The measurement of

The management o hydrometeorological disas hydrometeorological disas-ters calls for a paradigm shift towards developing, improv-ing and strategising through the disaster management continuum covered in the NPDM. Early warning sys-tems for all disasters must be developed and operabe developed and opera-tionalised along the lines of those for cyclones to ensure better results. A sustainable better results. A sustainable development model, nature-based development and solutions would help mit-gate the risk of disasters. The integration of disaster risk reduction and mitiga-tion measures into develop-ment policy planning and implementation must see implementation must get priority. All this needs to be monitored on a half-yearly of monitored on a half-yearly or yearly basis for better out-comes. The earliest these policy guidelines and opera-tions are adopted and imple-mented, the better they will be at tackling and managing these disasters.

The sinking feeling Urban flooding brings cities to their knees

N the age of so-called smart cities, the term 'urban flooding' sounds almost like an oxymoron. After all, a smart city ought to have an efficient stommwater drainage system that can handle a few hours' downdrainage system that can handle a few hours' downpour at the very least. On the contrary, flooded roads
are a common sight during the monscon in cities across
the country, right from Delhi and Chandigarh in the north
to Chennai and Bergaduru in the south. Gungram, the
Millennium City, has failed to solve this problem despite
having spent more than Rs 100 crore on anti-wateriogging
measures in the past three years. What else can you expect
when nearly half of the drains are not decaned before the
onset of the rainy season? Incidentally, Gungram is not
part of the Centré's Smart City Mission. When asked why,
the Haryana CM had said in November 2022 that the state
government wanted to make it the 'smartest' city and not
just 'smart.' Well, smart, smarter or smartest, the watery just 'amart', Well, smart, smarter or smartest, the watery nightmare continues for Gurugnan residents. Stormwater drainage systems often don't operate to their designed capacities because of poor maintenance;

in some cases, the capacities have not been augmented despite the rapid pace of urbanisation. Encroachments and unplanned growth have worsened the situation. Adequate preparedness is half the battle won when it comes to flood control. However, high-intensity rainfall in a short duration invariably catches the municipal and urban development authorities off guard. And hapless

urban development authorities off guard. And hapless citizens are left to sink or swim in waterlogged streets.

Apparently, funds are not an issue. Under AMRUT (Atal Mission for Rejuvenation and Urban Transformation), 772 stormwater drainage projects worth Rs 2,140 crore have been completed in various states and union territories. Thousands of waterlogging points have been reportedity eliminated, by the inevitable happens whenever it rains heavily. A lack of political and administration will be reducine efficient of the description of the description of the property o istrative will is reducing glitzy cities to hellholes. They must set their house in order sooner than later.

Relief for Ramdev

But Supreme Court's warning stands firm

HE Supreme Court's decision to dose con tempt proceedings against Ramdev and Acharya Balkrishna in the Patanjali mislead-ing ads case may seem like a reprieve, but it comes with a stern warning that cannot be cornes with a stern warning trait cannot be ignored. While the court accepted their apology, it did so begrudgingly, reflecting its deep frustration with Patan-jali's brazen disregard for legal and ethical standards. Patanjali's misleading claims about Coronil being a cure for Covid-19 were not just irresponsible; they were dan-gerous. At a time when the nation was grappling with a deadly pandemic, such unfounded claims had the poten-tial to mislead millions. The Indian Medical Association rightfully took a stand, labelling Patanjali's actions as a blatant lie' and pushing for accountability. The compa-ny repeatedly tried to deceive the public with dubious

advertisements, even after being warned by the court. The Uttarakhand State Licensing Authority, which eventually suspended the manufacturing licences of 14 Patanjali products, was also not spared by the court. The authority's inaction for months, until it was forced to act, carned it a sharp rebulse from the Bench, which accused it of being complicit in Patanjali's continued violations. This delay in enforcement not only undermines regulatory integrity but also raises questions about the authority's commitment to public health. Patanjali's attempts to downplay the severity of its misconduct through half-hearted apologies have rightfully angered the court. Its

'absolute defiance' and lack of genuine remorse were met with the court's order for a full-page public apology. While Ramdev and Baltrishna may have escaped immediate legal consequences, the apex court's warning is clear; any further transgressions will be met with the full force of the law. Putanjali's actions have not only eroded public trust but also exposed the company to the risk of far harsher penalties if it continues down this reckless path.

ON THIS DAY...100 YEARS AGO

The Tribune.

LAHORE, THURSDAY, AUGUST 14, 1924

Dyarchy must go
THE keynote of the evidence given by NK Kelkar, an ex-Minister from the Central Provinces, before the Reforms Committee is that like Mr Chitnavia he is entirely opposed to the continuance of dyarchy, even if such defects in its working as experience has disclosed are removed. "I am not in favour of dyarchy, even if such defects in its working as experience has disclosed are removed. The most in favour of dyarchy, he said in reply to Mr. Jinnah. "It must be done away with. I would not accept dyarchy even if overtain imperfections are removed. I won't work it again. Past experience has shown that it is unworkable." The same view was relierated by the witness with even greater emphasis in nepty to a question by Dr. Paragipye, when he said that "in the best of circumstances dyarchy cannot be worked". As in the case of Mr. Chitawa's, one strong reason which the witness gave in support of this view was that he had to please two masters, and that, to quote his own words, "for all practical purposes it is the Governor who is really in charge of the transferred subjects, because Ministers are merely advisers." Incidentally, he made one or two statements which show how intolemble the position of a Minister is in the present conditions. He is supposed to be responsible for the administration of the subjects of which he is in charge, not to the Government of India or the Secretary of State, but to the Legislature. And yet in actual practice, he has not the power to have his policy carried out in detail by the permanent officials, especially the heads of departments, who have not only the ordinary human right to differ from him, which is just and proper, but the right to go over his head to the Governor in case of a difference of opinion between them and him.

The return of the Foreign Hand

The focus has to be on good governance rather than the search for an alibi to explain domestic failures

SANJAYA BARU

Hindenburg and George Soros to international human rights organisations to an assortment of and spies, the Foreign Hand is allegedly back in India Despite the popular basis of the protests and the mass the protests and the mass mobilisation by young persons that sent former Bangladesh Prime Minister Sheikh Hasina packing, there have been alle-gations that a Foreign Hand was behind her ouster. To be sure, South Asia may well be a playground in an unfolding New Cold War, as it

was during the Oid Cold War, so to speak. Many countries, big and small, have acquired a stake in the region. So, it would be tempting to see shadowy forces operating, more so when cataclysmic events like a regime change occur. However, more often than not, the sources of the problems countries in South Asia are having to deal with lie at home. was during the Old Cold War, so

tries in South Asia are having to deal with lie at home.
Every now and then, the Foreign Hand males its appearance in Indian political discourse. In the run-up to the 2024 General Election, none other than the Prime Minister himself spoke about global threats to India's internal statistics and success and consulting the property of bility and progress and empha-sized the need for a 'strong and stable' government with overwhelming parliamentary majority. In the event, the elec-torate did not take that threat eriously and gave him a sub optimal result.

Many political analysts have often remarked that Narendra Modi has borrowed much from the political toolkit of Indira

t many within the ruling dispensation in India see a Foreign Hand behind stock earch into the financial operations of the Adani Group, manues

Gandhi. Blaming the Foreign Hand for his political problems is one such borrowed idea. Except, that Indira was operat-Except, that Indira was operating in an era wherein heads of government were bumped off by shadowy elements. Her media adviser, the late HY Sharada Prasad, has left behind notes suggesting that she may well have imposed Emergency rule in 1974 fearing that she was the next target of a Foreign Hand, after Chile's Salvador Allende was sassassinated in was assassinated in

Allende was assassinated in 1973. Both Fidel Castro and Leonid Brezhnev had allegedly warned her as much. The 1969s and 1970s, the high noon of the Cold War, was indeed the era of the Foreign Hand, Both the US and the Soviet Union were seeking allies and puppets to bolster their care were Irofi awas the allies and puppets to bolster their own power. India was then on the wrong side of western powers. Today, India sees stself as a "strategic partner! and a 'non-NATO ally' of the US. Yet, paranola and the politics around the Foreign Hand, in which even the US is suspect, bean not more away. ave not gone away: With the end of the Cold War,

the talk of a Foreign Hand sub-sided, though it never disap-

Arbitrary actions of various institutions in India, from investigative agencies to regulatory ones, are responsible for questionable decisions.

peared. With the implosion of the Soviet Union, India drifting closer to the US and a surge in the numbers of Indians head-ing West and seeking citizenship of Anglophone countries, the Foreign Hand receded from public discourse. It would make its appearance every now and then, as it did in 2012 when even a sober leader like then Prime Minister Manmohan Singh felt compelled to see the Foreign Hand behind the

Roreign Hand behind the protests targeting the Russian-aided nuclear plant at Kudankulam in Tamil Nadu. Given this background, it is not at all surprising that a polit-ical party like the BJP under a leader like Modi, should see Preign Hands behind every problem and challenge. For a decade now various agencies of decade now various agencies o the state have hounded all manner of organisations ranging from the Ford Foundation to the Centre for Policy Research alleging plots hatched by Foreign Hands. So, it is not surprising that many within the ruling dispensation in India see a Foreign Hand not just behind Haxina's ouster but also behind stock market analyst Hindenburg's research the state have hounded all nalyst Hindenburg's research

analyst Hindenburg's research into the financial operations of the Adani Group.

Maybe there are many Fer-eign Hands at work in India, just as Indian 'hand' are at work overseas. That allega-tions about Indian agents being involved in assassination plots overseas are being taken seriously around the world point to the coming of age of

the Indian hand. Even if ele ments outside a country are conspiring against one, the bot-tomline has to be that the gov-ernment of each such country should look inwards and ask what actions it may or may not have taken that have helped Foreign Hands a play.

Foreign Hands a play.

In an uncertain and rapidly changing world, a major power like India must focus on interlike India must focus on inter-nal security and governance so as not to create situations that open up space for the Foreign Hand to play around. It is easy to divert attention from mis-governance at home by alleging that a Foreign Hand is responsa-ble for everything that goes ble for everything that goes wrong. The fact is that Hasina wrong. The fact is that Hassina laid the foundation for her ouster. The fact also is that arbitrary actions of various institutions in India, from investigative agencies to regulatory ones, are responsible for questionable decisions.

There is no denying that the

tionable decisions.

There is no denying that the Cold War era has left behind the memory of the unfriendly Foreign Hand destabilising the country. It is also understandable that in a post-colonial society that still has the memory of the East India Company morphing into the British State, the Foreign Hand is seen not mere. Foreign Hand is seen not mere

Foreign Hand is seen not mere-ty in the suspected and alleged actions of spooks and fifth columnists but also in the actions of those in the corporate and financial world.

However, India has moved on. With the exception of less than a handful of countries, there are no others that would want to see India remain weak, back-ward and underdeveloped.
Western powers have recogward and underdeveloped.
Western powers have recognised that a developed and selfconfident India is in their interests. Even as our foreign policy
seeks an external environment
conducive to the country's economic development, at home the focus has to be on good and transparent governance rather than the search for an albi to explain domestic failures and bad governance.

THOUGHT FOR THE DAY

I'm not a conspiracy theorist — I'm a conspiracy analyst. —Gore Vidal

Whom you travel with matters a lot

THE rickety bus groaned as it climbed higher

THE rickety bus groaned as it climbed higher into the mountains, winding its way through clouds that clung to the hillsides like a misty veil. The journey from Chandigarh to Shoghi had only just begun. Inside, the air was damp but cool—a welcome relief from the city heat.

As the bus continued its ascent, I settled into my seat, the soothing coolness inside contrasting with the warm haze of the city. Gazing out at the cloud-covered peaks, the road ahead curled like a ribbon through the mist. Verdant trees and rocky cliffs emerged and disappeared in the fog, while droplets of rain traced delicate patterns on the glass.

The bus came to a halt near Jabli, a small stop almost hidden by the dense fog and foliage. Outside, a young couple hesitael, caught between the shelter of an old tea stall and the bus door. The youngster with a closely

tea stall and the bus door. The youngster with a closely trimmed beard and the belle — her brown eyes bright against her rain-kissed face - exchanged glances fore deciding to board.

against her rain-kissed face — exchanged glances before deciding to board.

The conductor, a man with a face etched by years of mountain weather, leaned out of the open door. For what felt like an eternity — a minute and three seconds to be precise — he coaxed them aboard with tales of the best place to stop for chai.

About an hour earlier, the same man had signalled the bus to slow down for me in Sector 28. Chandigarh, his voice cutting through the noise as he urged me to hurry. The gruff exterior had softened into something else entirely — a mix of charm and local pride as he turned tour guide.

The pretty woman found the last available seat next to me, while her partner stood nearby, holding onto a metal bar as the bus resumed its climb. The conductor's voice dropped to a softer tone as he explained something to her, words I couldn't quite catch over the engine hum.

catch over the engine hum.

eatch over the engline hum.

As the bus weaved along the winding road, the landscape shifted with every turn. Streams cascaded down
moss-covered rocks, and the smell of wet earth mingled
with the scent of fresh pine. Finally, the conductor's
coarse voice reminded me to prepare for my stop.
With a final joil, the bus came to a stop and I stepped
out onto the wet road cutting through the Shoghi
bazaar. Glancing inside, I saw the conductor's courtesy resurface as be genify pushed the woman's partner into the seat. Standing there, I realised it is neither
about travelling nor arriving. It is whom you travel about travelling nor arriving. It is whom you travel with that makes the journey worthwhile.

LETTERS TO THE EDITOR

No let-up in crimes against women Apropos of the editorial 'Kolkata horror'; the brutal rape-murder of the trained doctor is a national shame. The incident is reminiscent of the equally horrific Nirbhaya case. It is ironic that there is no Nirbhaya case. It is ironic that there is no let-up in crimes against the fair sex in a state whose CM happens to be a woman. The heinous offence must pave the way for reforms to check violence against women. And make sure that the perpetrator does not get off scot-free. Besides, this episode must compel our political leaders and the authorities concerned to do some soul-searching. do some soul-searching.

SHAM MURARI SHARMA, CHANDIGARH

Instil fear of law in criminals

With reference to the editorial 'Kolkata horror'; the rape and murder of a doctor at a state-run medical college and hospi-tal in Kolkata has shaken the conscience of the entire nation. However, the outrage over the heinous offence must translate over the heinous offence must translate into action. Purther, negligence on the part of the hospital authorities and security personnel should not be excused. In Haryana, there have been multiple cases of school authorities molesting or raping students. Such incidents are proof that criminals don't fear the law. But exemplary punishment for the culprits can set a strong precedent.

VUAY KUMAR KATIAL, PANCHKULA

Death for all rapists

Refer to Kolkata horror; the gruesome nature of the crime has sent shockwaves across the country and evoked unpleasant memories of the chilling Nirbhaya case. The fact that the incident is just one in a The fact that the incident is just one in a series of bruilar pace cases reported in India in recent years shows that little has changed on the ground in a decade. How long will women in this country continue to face sexual violence? India cannot be a prosperous nation as long as our mothers, wives, sisters and daughters continue to be preyed upon. All men convicted of rape should be hanged till death. That is the only way to bring about a positive change.

SKNOSIA, CHANDIGARH positive change. SK KHOSLA, CHANDIGARH

Ensure safety of health workers

The rape and murder of a trainee doctor in Kolkata have understandably sparked in Kolkata have understandably sparked a nationwide outrage. It is common knowledge that government hospitals usually lack proper facilities for patients. But it is concerning that state-run hospitals don't even have adequate security arrangements. Even CCTV cameras installed at government medical facilities are sometimes found to be non-functional. If the hospital authorities cannot even ensure the safety of their own staff members, how can they be entrusted with the wellbeing of the patients?

JAMOR HUSSAIN, KANPUR

JAKIR HUSSAIN, KANPUR

India far behind in Olympics
It is unfortunate that India finished 71st
in the medal tally at the recently concluded Paris Olympics. While the US clinched
126 medals at the Games and China 91, India could only manage to bag one silver and five bronze. Clearly, we have some catching up to do. An analytical look at catching up to do. An analytical look at our sports policy reveals that decisions pertaining to the allocation of funds and the development of infrastructure are heavily influenced by politics. An over-haul of the system is in order. Political or bureaucratic interference in sports is a big no-no. Further, we must take a leaf out of the book of countries like China, which has been performing well at the Olympics, to set bette results.

to get better results.

PREM SINGH DAHLYA, ROHTAK

Ban construction near rivers

Ban construction near neers
Refer to the news report. Houses tester on
the edge after flash flood, admn seeks
report; by letting people build their houses
sa along the banks of rivers, the authorities concerned have put their lives in peril. The local administration must probibit ii. The local administration must probibit any construction near a natural water body. Members of the public must also draw lessons from past tragedies that saw whole houses being swept away in the rag-ing water and be mindful of the risks asso-ciated with living on the banks of a river, especially when it is in spate.

FIRSTCOLUMN

FROM RIFTS TO RESOLUTION

It is very important to recognise that the world shall change when I change

all know that conflicts are a part of our everyday life and they form in our close relations, at a societal level & on an interna-tional level. Very often we see conflicts leading to aggression, hostility and war. However, conflicts can also be a stepping stone lead-Industry aid war. Indusery, commos car also use a sepping sourie entring to change and wisdom; if we learn to handle them constructively. Since relationship conflicts are inevitable, learning to deal with them heathly is extremely crucial because when a conflict is mismanaged, it can harm the relationship. But when handled respectfully and positively, it provides an opportunity for growth, ultimately strengthening the bond between two people. Any kind of conflict has two dimensions, internal and external. Internal

Any knot of conflict has two dimensions, internal and external. Internal conflicts arise when the mind and intellect are moving in opposite directions and external conflicts are caused when people or situations confront us and we are not sure how to cope with them. Some people view conflicts are no opportunity for a change and some see it as a natural global phenomenon. But others feel that conflicts are avoidable through better communication but they are frightened of the process. Due to this fear, they hold themselves back and content themselves by making a peace contract or a deal. However, such solutions are very temporary and can be seen as a band-aid solution, which might be effective for the short term only. We all know that conflicts ought to be resolved by the short term only. We all know that conflicts ought to be resolved by use of intellect or reasoning because when conflicts are allowed to develop unhindered without intervention or when the parties involved fuel the

conflict, it often happens that the conflict evolves negatively. And that is why people seek guru's or senior's advice when they are faced with conflicting decisions. But the irony is that with all the information and advice that is available to us, we are unable to resolve matters because there is an acute implementation paralysis. We must not forget about the fact that the best source of judgement is a person's intellect because nobody can understand his feelings, situations and capabilities to deal

nobody can understand his feelings, shushons and capabilities to deal better than his self. We may seek advice from an experienced person, however, the sense of joy or security that we feel on hearing good advice is only temporary because it is not real. Just like the feeling of Joy derived from thinking of eating something delicious is urreal, real Joy comes only after eat-ing the thing. We too have to undergo an experience to make it real. Remembert conflict triggers strong emotions and can lead to hurf feel-ings. siteanootiment and discordors! When hapefled is a undeasithy. ings, disappointment, and discomfort. When handled in an unhealthy manner, it can cause irreparable rifts, resentments, and break-ups. But when it is resolved healthly, it increases our understanding of one another builds trust, and strengthens our relationship bonds. A growing body of research has shown spirituality as a great antidote for all kinds of conflicts. Spiritually is like the medicine that heals the root of the disease and not just the symptoms. It is the only means that gives us complete solutions to conflicts. From a spiritual perspective, the most powerful value needed for conflict resolution is 'respect'. This is because most of the people don't wish to negotiate when they have material power. Therefore, there's an urgent need for those to realize and respect their inner powers. Similarly, fallif is also a very important element in conflict resolution, it is the key to mutual understanding. For global conflicts, the solution lies with the leadership. The leaders can bring about the much-needed change and make it trickle down the societies. Leaders of boday must remember that any kind of change can be termed Yea² only when it affects the grassroots. It is thus very important to recognize that the

Rupee's fall against dollar is a wake-up call for India

As the rupee weakens and inflation rises, strategic economic reforms to boost domestic manufacturing and reduce import dependency are urgently needed

he rupee hit a record low against the US dollar on August 5th and was trading at 84.09 per dollar. This is the rupee and the rupee has reached its all-time low. If the currency of any country is stronger than other currencies, then the country is considered strong. In this globalized world, the value of every country's currency against the US dollar not only impacts the economy of that country but also affects the prices of many things in the market.

Rupee has Fallen 20 Times the

impacts the economy of that country but also affects the prices of many things in the market.

Rupee has Fallen 20 Times since Independence: The rupee has fallen almost 20 times since independence; in 1948, I dollar was equal to 4 rupees. At that time there was no debt in the country, then when the first five-year plan was implemented in 1951, the government started taking loans from foreign countries and then the value of the rupee also started decreasing continuously.

The continuous outflow of foreign funds from linancial markets and crude oil has increased pressure on the rupee. The economy around the world has seen two major shocks – the COVID-19 pandemic and the Ukraine, Israel conflict. India is also not untouched by this. Today, the condition of currencies in major markets around the world is weak.

Dollar as King: According to the International Standard Organization list, there are a total of 180 currencies around the world, but among them, the American currency Tollar has become a global currency. The price of most of the things exported is paid in dollars. Today the dollar is involved in 80 percent of the world's trade. The US dollar has the status of a global currency, which is why the value of the rupee against the dollar shows whether the Indian currency is strong or weak.

The falling value of the Rupee affects.

dollar shows whether the Indian currency is strong or weat. The falling value of the Rupee affects Common People: When the rupee becomes chaeper against the dollar, it has a direct impact on the economy. The falling value of the rupee brings inflation. Rising prices could accelerate inflation, which is already high. In such a situation, everything from the life of the common man to businessmen and government will be affected by the value of the rupee. The decline in global activity, investors' decision to invest money in safe global markets and increasing tension in global politics are among the main reasons behind the fall of the rupee. Even if we do not take seriously the fall and rise of a few paise in the rupee, they have a

reasons behind the fall of the rupee. Even if we do not take seriously the fall and rise of a few paise in the rupee, they have a big impact on our lives. The fall in the rupee has a direct impact on the country's economy, due to which import of petroleum products will become expensive and freight transportation will become expensive. This will have a direct impact on the inflation of every essential item. There is a sudden increase in all loans taken in foreign currency and the interest paid on them. Studying abroad will also be expensive. Why the Rupee is falling: The value of the rupee completely depends on its demand and supply and import and export also have a direct impact. A country that imports more than it exports has a higher demand for dollars. Like India imports more than it exports. India is one of the major importers of crude oil and imports about 80 per cent of the oil, undoubtedly the rising prices of crude oil

INDIGENOUS GOODS THEN THE COST OF **IMPORTING** FOREIGN GOODS WILL BE SAVED. FOR INDIA TO BECOME A \$5 TRILLION **ECONOMY BY** 2025, WE NEED TO EXPORT AT LEAST \$2.5 TRILLION WORTH OF GOODS AND SERVICES, AS **EXPORTS** CURRENTLY CONTRIBUTE ABOUT 25% TO THE TOTAL **GROSS DOMESTIC**

in the international market are the main reason for the fall in the value of the rupec. Things to do for the value of the Rupec. Although the Central Government has assured to make every possible effort to stop the fall of the Rupec, now the Government will have to take concrete and tough steps. If the government tries to change its economy dependent on oil, then we can save a huge part of the foreign reserves and for this, we all should consider alternatives to oil. There is a need to pay attention to electric vehicles. Effective steps will have to be taken to stop the fall in the value of the rupee and keep the foreign exchange reserves rich.

he fall in the value of the rupes and keep the foreign exchange reserves rich. Steps: The government is indeed striving to create a competitive, dynamic environment to provide sustained economic growth and enhance its relevance in international trade, PM Gati Shakti, National Single Window Clearance, GIS-mapped Land Bank, Production-Linked Incentive (PLI) etc. The manufacturing sector is expected to benefit from the implementation of recent policies like the PLI scheme. Its results are also visible in some areas, the development of coronavirus vaccines by Indian companies is a vivid example of indigenous talent. India has rapidly made its place in the Ease of Doing Business index released by the World Bank. India's EDB rank was 134th in the year 2014, whereas in the year 2023, it has become G3rd. India is ranked 40th in the Global Competitiveness Report Index published by the Genevabased World Economic Forum, where it was ranked 60th in 2014. But all these reforms in the ranks have also failed to revive the manufacturing sector and provide the desired support to the Make in India campaign.

Big Time for Make in India. The government will have to move strategically towards controlling imports and increasing exports.

This is the time to effectively

implement the 'Make in India' program which even after nine years is far behind in its effective contribution. Despite being the fifth largest economy, India contributes barely 1.6% to world exports. A primary objective of the campaign was to increase the share of the manufacturing sector in the Indian GDP to 25 per cent by 2022 although it has remained between 14 to 16 per cent in the last 9 years. During the coronavirus pandemic, there was publicity that the companies leaving China were going to come to India, however, most of these companies have implement the 'Make in India'

companies leaving China were going to come to India, however, most of these companies have shifted their base to Vietnam, Taiwan, Thailand etc. and only a few have come to India. Every year crores of laptops, desktops and servers are sold in India, in which motherboards memory models and chips are being imported. We are dependent on other countries for these components.

India remains flawed due to the poor infrastructure of the country. Compared to China, which spends 20% of its GDP on infrastructure development, our country spends only 3%. Way Forward: At a time when the value of the rupee has crossed Rs 84 per US dollar, the role of 'Make in India' becomes very important. According to the International Labor Organization (ILO), India may face a shortage of about 29 million skilled workers by 2030. The economy needs more than India remains flawed due to the million skilled workers by 2030.
The economy needs more than policy window dressing to increase manufacturing activity. We need to understand that just passing bills and organizing investor conferences will not be enough to promote industrialization.

enough to promote industrializa-tion.

The manufacturing sector is con-strained by large amounts of paperwork, be it labour, land or environmental clearances, strin-gent regulations and policy. Taxation and customs policies are complex to such an extent that it is cheaper to import things like medical equipment rather than manufacture the equipment domestically. India can make itself the next global factory in the future, which is already fed up with China and is looking for alternative manufacturing hubs. There is a need to free the man-ufacturing sector from cumber-some rules.

Certainly, the fall of the rupee

ufacturing sector from cumbersome rules.
Certainly, the fall of the rupee against the dollar can be controlled through such effective steps. Also, if we start using indigenous goods then the cost of importing foreign goods will be saved. For India to become a \$5 trillion economy by 2025, we need to export at least \$2.5 trillion worth of goods and services, as exports currently contribute about 25% to the total gross domestic product (GDP). India has no time to rest. We have come a long way, but the journey is not over yet.

world shall change when I change. Hence, people should not wait to be **PRODUCT** wono small change, instead, they should realise it themselves. (The writer is a spiritual educator & popular columnist, views are personal)

The strength of sisterhood: How women's circles empower and change lives

Women groups foster empowerment, drive economic progress, and challenge societal stereotypes, proving that together, women can achieve anything

Humans are inherently social beings, and thrive on social beings, and thrive on social connections. This insight struck me during a recent celebration of Hariyail Teel, a Hindu festival dedicated to women. On this day, women don traditional attire, enjoy special foods, and revel in music, reflecting the profound significance of women's gatherings in our cultural history. Hariyail Teel exemplifies the value our ancestors placed on women's circles. These gatherings not only provide joy but also reinforce the unique strength women possess. This power is deeply rooted in their ability to manage and share energy, which flourishes through communal interactions. Women need to con-

SUGANDHA NAGAR

nect with their feminine essence and the best way to essence and the best way to nurture this strength is by bonding with other women. Such connections are crucial for self-discovery and

for self-discovery and empowerment. The concept of Shine Theory, coined by journalist Ann Friedman and business-woman Aminatou Sow, encapsulates this idea: excep-tional women support each other to shine even brighter.

Historically, women have passed wisdom and experience through communal practices, whether through household chores or cultural rituals. For example, radiational activities like grinding spices together in Indian families or crafting quilts in Alice Walker's "The Color Purple" symbolize unity and shared strength.

symbolize unity and shared strength. Everyday interactions among women not only ease the burden of tasks but also pre-serve cultural traditions and serve cultural traditions and create a space for emotional exchange. These interactions form a vessel of healing and transformation, extending beyond personal growth to effecting positive change in their communities. In modern settings, such as neighborhood gatherings or

workplace environments, the same principles apply. Despite the often harsh competitive dynamics driven by stereotypes, supportive women's circles ofter a vital source of relief and rejuvenation. Unfortunately, societal narratives and media perpetuate the myth that women are inherently competitive and unsupportive of one another. This stereotype undermines the historical practices of women upiliting each other and fosters unhealthy rivalry. Recent initiatives aim to counteract these negative dynamics by promoting women's economic empowerment. The Union Budget for 2024-25 proposes establishing working women hostels and supporting women-led self-help groups (SHGs). These

measures are designed to enhance financial stability enhance financial stability and provide economic opportunities for women, particularly in rural areas. The goal is to transform women into "Lakhpati Didis," or those with an annual income exceeding INR 1,00,000, while also encouraging sustainable livelihoods and

improved living standards. The emphasis on SHGs high-lights the importance of col-lective unity and mutual sup-port among women. These groups not only provide eco-nomic benefits but also fos-ter a strong network of women who support each other's growth and success. By encouraging more women to

environments, we can pave the way for greater econom-ic prosperity and gender

ic prosperity and gender equality.
Sheryl Sandberg, former COO of Meta Platforms, emphasizes the power of women supporting women in her book, "Lean In: Women, Work, and the Will to Lead". She dispels the myth that women don't support each other, arguing that collaboration among women is key to achieving remarkable success. Successful women often we the backing of other have the backing of other

cess. Successful women often have the backing of other women who help them reach their goals.

To overcome systemic dis-crimination and internalized biases, women must chal-lenge the societal pressures that pit them against each

other. By rejecting stereo-types and fostering genuine support, women can create spaces where they feel safe to express themselves, show vul-nerability, and receive the support they need. Ultimately, female friend-ships and communal support not only inspire personal and spiritual growth but also enhance collective strength and performance. Women's circles provide a crucial plat-form for sharing energy, ideas, and support, enabling women to achieve their full potential and contribute pos-

women to achieve their full potential and contribute pos-itively to their communities. (The author is a writer, social worker, culture enthu-siast, and former UN employee; views are personal)

Sunshine after the storm

Indian agriculture set to benefit from good monsoon and PM Modi's release of climate-resistant seeds

ndia's agricultural sector, the cornerstone of its economy, is set to benefit from a double dose of positive news this monsoon season. With forecasts predicting a normal to above-normal monsoon and Prime Minister Narendra Modi's recent announcement of 109 climate-resistant seed varieties, the outlook for the country's farmers is brighter than ever. These developments not only promise a significant boost for agriculture but also hold the potential to ease inflationary pressures—a key concern for both policy-makers and the general public. A favorable monsoon is expected to drive agricultural growth in India, with a report from India Ratings predicting a 4.3% increase in FY25, up from 1.4% in FY24. The monsoon plays a critical role in sustaining food supply, which in turn satisfies consumer demand and helps stabilise food prices. Additionally, a good monsoon increases rural incomes, which can stimulate demand for fast-moving con-

sumer goods (FMCG). Monsoon rains are vital for Indian agriculture, particularly for the kharif crop season, which includes staples like rice, maize, and pulses. With nearly 60 per cent of India's farmland being rain-fed, a good monsoon often trans-lates to a successful harvest. This year's normal to above-average rainfall has raised hopes for a bumper crop season. A successful monsoon reduces the need for costly irrigation solutions, helping farmers save on input costs. As a result, rural incomes are expected to rise, driving consumer demand in villages and small towns, which are vital engines of the country's economic growth.

Against this promising backdrop, Prime Minister Modi's release of 109 climate-resistant seed varieties marks

a significant step towards securing India's agricultural future. These seeds have been specially developed to withstand the growing challenges posed by climate change, including erratic rainfall, prolonged droughts, and rising temperatures. By enhancing crop resilience, these seeds aim to ensure stable yields even in adverse weather conditions. The introduction of these seeds is a forward-looking initiative that aligns with the govemment's broader agricultural strategy, which emphasises sustainability and self-reliance. These seeds are expected to reduce crop losses due to unpredictable weather, providing farmers with a safety net and helping to stabilise food production. This could lead to a more consistent food supply. In recent years, inflation, particularly driven by volatile food prices, has been a persistent concern for the Indian economy. A good monsoon and the adoption of climate-resistant seeds could bring much-needed relief to consumers, especially those in lower-income brackets who are most affected by rising food costs. During his second term, Prime Minister Modi had promised to double farmers' incomes— a goal that was challenging to achieve at the time. However, that target now seems within reach. The combination of good rainfall and resilient seed varieties could be the key to realising that vision and securing a prosperous future for Indian agriculture.

Finding fault with the US for internal failures

The narrative of an 'American hand' in political unrest in South Asia sells. even as the root cause of instability often lie with its own politicians

he United States of America did not have America did not have a significant role in the run-up to the independence of the Indian subcontinent from the British Raj. Indeed, the Gadar Party started as a San Francisco-based anticolonial organization, as did the New York-based India Home Rule League founded by Lala alpat Ral, but the Government of the USA had remained largely oblivious of the subcontinental developments. It was only in the post-World War 2 tensions between the competing 'blocs', the post-World War 2 tensions between the competing blocs, when the Cold War started in earnest, that the USA went into overdrive to control the subcontinental narrative. To further its interest, the USA had backed military dictators in Pakistan, and undemocratic monarchies in Afghanistan and Nepal, while remaining decidedly hostile towards India. Washington DC: tellingly overlooked the genocidal conduct of the Pakistani Generals in what later became, Bangladesh. Americans were instrumental in Americans were instrumental in Americans were instrumental in Americans were instrumental in Americans were instrumental in

harnessing toxic religiosity by cre-ating the Afghan mujahedeen, the curse of which continues to this curse of which continues to this date. Pakistan was a 'Major Non-NATO Ally' and did most of its bidding in the region. The end of the Cold War with the implosion of the Soviet Union in the early 90s coincided with the rise of China as the new principal enemy. This led to a recalibration of allies and enemies, which eventually warranted a more pro-India outlook from Washington DC, even though an unnatural India outlook from Washington DC, even though an unnatural alliance with Pakistan persisted owing to the necessities of Afghanistan and tackling religio-

For a variety of reasons, includ-For a variety of reasons, includ-ing the continuing War on Terror' in Afghanistan, the Middle East, and Iran, to now the latest Israel-Palestine War, percep-tions of America within the Ummah (Islamic World), made it naturally unsavoury. This often makes the USA the prime suspect for anything that went wrong in Tehran, Kabul, Damascus, Islamabad to even Dhaka, Invariably the Americans are seen to be partaking in Samuel P

Huntington's 'Clash of the Civilisations', which seeming-ly pits the Americans as a force against the Ummah. America-bashing is a latent and potent undercurrent that is tapped by various political parties in the Islamic countries of the region like Pakistan, Afghanistan, Maldives or Bangladesh, even if the same is genuinely warranted or not. There is no denying that America has had an amoral past with many misan amoral past with many mis steps and convenient overlook ing of events, but it is equally ing of events, but it is equally true that many political parties have twisted and even extrap-olated the same to suggest out-sized agendas for Washington DC because they know that such a spiel feeds into the pop-ular and basic instincts of their citizenty. In Pakistan, amidat the turf wars between the Military 'establishment' and Imran Khan's Tehreck-e-Insaaf gov-ernment, the willy Imran Khan

'establishment' and Imran Khan's Tehreck-e-Insaaf gov-ernment, the wily Imran Khan dialled up a phoney 'cypher' controversy entailing a foreign power i.e., the USA. This move sought to conflate two enemies (one already imagined i.e. USA, and the other requiring some context i.e. Pakistan Military) to apportion a disproportionate role for the Americans, as it was safe and popular to do so. The Americans have historically had a say in Pakistani affairs, but the ouster of Imran Khan had more to do with the Pakistani 'establishment' tak-

THAT DHAKA UNDER

HASINA HAD ADOPTED A BELLIGERENT STANCE AND EVEN COSIED UP TO ITS NEMESIS THAT IS. CHINA, BY **ACCEPTING** BEIJING'S OVERTURES -BANGLADESH WAS NOT CHINA'S BUNNY IN THE SAME WAY AS PAKISTAN IS, NOR WAS IT POISED TO GO THAT WAY

ing the initiative with Americans agreeing to the same, as opposed to the other way round. Today, realising his folly of hav-ing overplayed the America-hand storyline, Imran Khan has defly redirected the attack onto his local political rivals as opposed to the Americans or even the Pakistani 'establish-ment', as done earlier. Now, ment, as done earlier. Now, after the self-created tinder-box-like situation and the sub-

show like situation and the sub-sequent implosion, Bangladesh's former Prime Minister Sheikh Hasina is believed to have drummed up the US hand in the recent coup. While it is true that Dhaka under Hasina had adopted a belligerent stance and even cosied up to its menesia ic., China, by accept-ing Beljing's overtures – Bangladesh was not China's burny in the same way as Pakistan is, nor was it poised to go that way, either. It is true Hasina had declined the American request for a Hasina had declined the American request for a Military base in its Saint Martin Islands, but that was more out of good sense given the societal sentiments that prevailed and good local pol-

prevailed and good tools po-litics.

The only thing that riled out
Hasina was the routine con-cerns expressed by the USA
that Hasina was increasingly
undemocratic, intolerant and
authoritarian (which she was)
– but other than these con-cerns, both Hasina and the

Americans had a common enemy in religious-extremist forces that threatened the interests of both sides. Hasina also amplified her American rhetoric as it was without any accompanying risks and could endear her to Bangladeshi society, as the Ummah has been wounded by emotions of the Palestine war, and the tacit role of the USA. Hasina's purported accusation of the tacit role of the USA. Hasinias purported accusation of the USA plotting regime change in Bangladesh (in her undelivered speech) needs to be read contextually. His supposed stance that shed be in power if she had given away. Saint Martin and Bay of Bengal, is more theatrical than factual as Bangladeshis (especially youth) had genuinely tired of her rule.

youth) had genuinely tired of her rule.

If anything, the forces that have come to power reflect the sort of spirit and religious tenor that militates against American preferences. Hasina's exit has more to do with her hubris and more to do with her hubris and excesses than with America working overtime to dislodge her. America is just a convenient (though often justified) enemy in Islamic countries and those who are inelegantily bumped out resort to blaming the USA hand on the rebound e.g., Pakistan earlier, Bangladesh now. The quest for real freedom in a divided society

MOTHERS HAVE BIG HEART

Madam — In the world of sports, where records are measured in meters and sectionds, Nadeem's Olympic gold throw of 92.97 meters and Neeraj's silver throw of 89.45 meters are remarkable feats. Yet, they pale in comparison to the 'universal affection javelin throw' of infinite meters launched by their mothers. The media captured a heartwarming moment as both mothers wished their sons of just victory and medals, but everlasting friendship and affection.

Indeed, the true champions here are the mothers of Nadeem and Neeraj, whose boundless care and love transcend international borders, setting a new record for the longest 'affectionate and harmonious javelin throw' of infinite meters. Kudos to these incredible women for their unparalleled contribution to the spirit of sportsmanship and humanity.

ADDRESS ATTACK ON MINORITIES

ADDRESS ATTACK ON MINORITIES

Madam — The ongoing attacks on Hindus in Bangladesh are deeply concerning. Despite Hindu support for the movement against the Sheikh Hasina government, the new regime has falled to protect them. Alarmingly, Indian opposition parties, vocal about minority rights in India, have remained silent on this feater.

Nobel Laureate Muhammad Yunus, leading the interim government, has appealed for calm but to little effect. The anti-quota protests in Bangladesh, which led to the fall of the Hasina government, have now targeted Hindus, even though their involvement was primarily against the previous government. The situation worsened with the forced resignation of Bangladesh? Chief Justice Obaidul Hassan. Bangladesh remains an Islamic country, and protection for minorities is limited compared to India. West Bengal Chief Minister Mamata Banerjee's ofter to shelter anyone' in distress is problematic, as it could enable more Bangladesh infiltration into India, exacerbating the Nobel Laureate Muhammad Yunus, lead

LESSONS FROM WAYANAD

LESSONS FROM WAYANAD
Madam — The recent landslides and
floods in Wayanad, Kerala, have drawn
global attention, reminding us of the
ongoing vulnerability of our planet to natural disasters such as earthquakes and
floods. Our Earth has always been a
haven of beauty and abundance, providing a diverse range of species and natural resources like majestic mountains
and expansive oceans. For millennia,
Mother Nature has been humanity's
nurturing cradle. I recall the massive
floods of the early 1990s, which devastated regions in Tamil Nadu, including
Korkai, Tiruchendur, Tuticorin, and

and murder of a 31-year-old medical professional on the hospital grounds, will not alone bring justice to this case. The Federation of Resident Doctors' Association (FORDA) has demanded a CBI inquiry and calls for decisive action.

The frequency of such atrocities against doctors across the country, compounded by inadequate protection from many state authorities, is undeniable. The reluctance of junior doctors to speak out due to fear has led to even greater tragedies over the years. If this situation persists, it will severely impact medical care for millions of impoverished patients and place the medical profession in a critical condition.

Real liberation comes from transcending divisions and recognising our spiritual identity, a path that leads to peace, harmony, and tranquility

More than seven decades after we attained independence from the British, we are still enslaved-trapped in the bondage of caste, creed, are san tensawer appetent in the bondage of caste, creed, religion, regionalism etal. This has created deep fissures in society, destroying the democratic fabric of amity, harmony and peaceful co-existence. All this is there because as individuals, society and a nation, we have not attained real or to say ultimate freedom that promotes peace, harmony and happiness.

What is real or ultimate freedom? It is a state of not being enslaved to physical senses, to mind and its desires. It means breaking free from toxic thoughts and the vices associated

and the vices associated with it. We need freedom from prejudices of caste, creed and religion, greed and selfishness, anger and animosity, hate and hostil-

ity. But then why are we failing to achieve real freedom and to achieve real freedom and how can we attain it? Real freedom is eluding us because we are facing an identity crisis. We don't know our real identity.

this unreal world as the real world.

The basic nature of our material existence is bondage and when we act upon the material desires of the mind and senses, we often take to unwise and unholy acts which lead to our sorrows and sufferings. Because of duality, we tend to discriminate against fellow beings and this dis-

crimination takes the form of hatred, animosity and hostility, even leading to violence and bloodshed.

Liberation of the soul or spiritual freedom is the ultimate freedom. The devotees belonging to the Nirankari Mission observe the 15th of August as Mukit Parv Diwas' to signify the liberation of the soul. To attain this ultimate liberation, we have to come out of the contaminated state of our consciousness and position ourselves in a pure state of

our consciousness. Even bhagavad Gita says that being situated in such a position, one is never shak-en even amid the greatest difficulty and it is actual freedom from all miseries arising from material con-tact.

consciousness. Ever

arising from material contact.

We can certainly attain ultimate liberation through self-liberation by way of self realization that we are a pure and noble soul- a constituent of God. We can lead such an aware life constantly by strengthening our spiritual dimension through God's remembrance and the company of saintly persons. Lord Jesus set people free from bondage to live in the freedom that only comes from God.

We shall be able to attain We shall be able to attain real freedom by living an enlightened life in the spir-it of oneness (Vasudhaiva Kutumbkam) with the Creator and His creation, in turn turning this world into a happy, harmonious and peaceful place to live. The melting of polar ice due to climate change is making days longer

For people in low-lying coastal areas, rising sea levels because of melting ice have more devastating consequences than the wobble of the earth's axis or a lengthening day. Nevertheless, this is an example of how climate change affects our planet, pushing us towards a desperate need to curb emissions before the situation spins out of control

Rohini Subrahmanyam

cientists are attributing a slowing In the earth's rotation to climate change. Researchers have discovered that the melting polar ice caps have caused the earth to spin slower. This can lead to minuscule changes in the actual duration of a daysomething that, ironically, does not affect our daily lives as much but could affect the technology we rely on.

As we build more connections not just among ourselves in this world but also with outer space, tools that rely on precise timekeeping, like computer in the earth's rotation to climate

precise timekeeping, like computer networks and the ones involved in space travel, can be thrown off course by this

Making the world go around...

A basic physics phenomenon called the conservation of angular momentum is key to what is happening to the earth right now. When an ice skater rotates, if their arms are held in tightly, their moment of inertia decreases, and they spin faster. If they stretched their arms out wide, their moment of inertia world increase.

inertia decreases, and they spin faster. If they stretched their arms out wide, their moment of inertia would increase, making them spin slower. This is because angular momentum – a product of the moment of inertia and angular velocity – is conserved no matter how the skater is spinning. As polar ice continues to melt rapidly in a warming world, the globe isn't affected very differently from the spinning ice skater.

"When polar ice sheets and global glaciers melt, then this would go to the equatorial regions – we call this pole to equator mass flux," Mostafa Klani Shahvandi, a geophysicist at ETH Zurich and the lead author of the July 15 paper describing the recent results, said. "As the ice sheets melt, the earth's oblateness increases, and the region around the equator inogrates slightly. The moment of inertia increases, and the rotation rate gets smaller."

Water from the melt flows towards the equator, making the earth bulge out slightly, slowing its rotation and increasing the time taken to complete one rotation, lengthening our day.

"A pretty big thing"

'A pretty big thing'
Using a mix of climate models and real-world data, the scientists looked at a 200-year period, between 1900 and 2100. They found that over the last two decades, the changing climate's effects on sea levels around the equator have slowed the rate of the earth's rotation by around 1.3 milliseconds (ms) per century.

Based on their projections, if the high emission scenarios persist, his rate will change to 2.6 ms per century. This will

The coastline of a small island off the coast of Antarctica, seen from a window on a commercial flight in 2017. After the previous ice age, a large quantity of ice melted from the northernmost and the southernmost parts of the earth, causing the planet to spin faster. MATT PRIMERINISPIASH

melted from the northermost and the southermost end up making climate change the dominant factor in slowing the earth's rotation, surpassing other factors.

"What's impressive about this is that it's another indicator of just how big the effect of climate change has become," Duncan Agnews, an emeritus professor of geophysics at the Scripps Institute of Oceanography at the University of California, San Diego, said. "The fact that it can change — not by a large amount, but still, some amount — the actual rotation rate of the entire earth, it's a pretty big thing to have been affected."

The effect may be in the order of milliseconds, but it can still affect accurate timekeeping with atomic clocks. Even though we have kept time since the 1950s with the help of these ultra-precise devices, we also track the time taken for the earth's rotations and ensure they both match up.

rotations and ensure they both match up. Just like the earth's revolution around the sun takes just a bit longer than 365 days, requiring the addition of a leap day, its rotation is also not always exactly 24 hours. It's a couple of milliseconds more.

When a second is a lot A process called lunar tidal friction, or the moon pulling on the earth's oceans, has already been slowing the planet's rotation at about 2 ms per century. So if right now the earth takes about 2 ms longer to complete one day than the time predicted

Tools that rely on precise timekeeping, like computer networks and the ones involved in space travel, could be thrown off course

by atomic clocks, a 100 years later a day will be about 4 ms longer. As the milliseconds added up, leap seconds were added to keep pace with the earth's rotation. This is imperceptible to us, but systems like GPS, stock trading, and space travel bank on accurate measures of time and can be thrown off.

"In the precise timekeeping world, a second is a lot," Dr. Agnews said.
Some other processes, like the slowed rotation of the earth's core, have been speeding up the earth's rotation time.

speeding up the earth's rotation time After the previous ice age, a lot of ice melted from the northernmost and melted from the northernmost and southernmost parts of the earth, causing the crust to rebound at the poles. This has also helped the earth to spin faster, so much so that scientists have mooted debates to understand if we need a negative leap second to correct for it.

Dr. Agnews published a paper in Nature in March showing a similar result: that

THE CIST

water flows to the equator, which makes the earth bulge out slightly. This increases the rotation and thus lengthening our day

Over the last two decades Over the last two decades, climate's effects on sea levels around the equator have slowed the rate of the earth's rotation by around 1.3 milliseconds per century, if high emissions persist, this rate will change to 2.6 ms

These studies prove that climate change is interfering with something as fundamental as how the earth spins around its axis. Scientists found that the Scientists found that the location where the earth's axis intersects the crust is moving ever so slightly over

climate change and the resulting melting ice are slowing the earth's rotation and that that will actually delay the negative leap second.

Either way, both studies are proof climate change is exerting its effects over the entire planet by interfering with something as fundamental as how it spins around its axis. around its axis.

something as fundamental as how it spins around its axis.

Dr. Shahvandi and his collaborators published another recent paper in Nature Geophysics detailing the effects of melting polar ice on the earth's axis of rotation. Using observed data and predictions made by physics-informed neural networks, they found the melting of polar ice and glaciers is one phenomenon driving the earth's polar motion.

The location where the earth's axis of rotation intersects the crust is moving ever so slightly over time.

For people in low-lying coastal areas, rising sea levels because of melting ice lead to more devastating consequences than the mere wobble of the earth's axis or a gradually lengthening day.

Nevertheless, this is another example of how climate change is affecting our planet, pushing us towards a desperate need to curb emissions before the situation spins out of control.

would require a further removal of heat to bring about a phase change. This will only be possible by using a refrigerant. — B. Kavitha, Chennai

Opinion

Expanding contraceptive choices

recent study published in the journal Contraception X in the potential role of Levonorgestrel 1.5mg for pericoital use. Pericoital contraception refers to methods used at the time of sex, such as condoms and diaphragm. This is a reminder that there is a need to diversify contraceptive choices and respond to the unique needs of women and girls. Data show that in India, the sale of oral emergency contraceptive pills that in India, the sale of oral emergency contraceptive pills (ECPs) is over 35 million annually, with a decadal compounded annual growth rate (CAGR) of 12%. This proves that women and girls and their partners are choosing to manage their fertility as required.

Emergency contraception Emergency contraception refers to methods of contraception that can be used to prevent pregnancy after sexual intercourse. These are recommended for use within five days of unprotected sex but are more effective the sooner they are

more effective the sooner they are used. ECPs prevent pregnancy by delaying or preventing ovulation. The World Health Organization (WHO) states that all women, including those who cannot use hormonal contraceptive methods, can use ECPs safely and effectively. Due to the short-term nature of their use, there are no medical conditions that make ECPs unsafe for any woman. The WHO says there are no health risks with using emergency contraception. However, using an ECP is also a reminder to start using a regular contraceptive using a regular contraceptive method in consultation with the method in consultation with the healthcare provider because ECPs prevent pregnancy from acts of sex that took place only in the past five days; they will not protect a woman from pregnancy from acts of sex more than 24 hours after she takes ECPs.

While the public sector continues to be the major source of family planning, specifically for female and male sterilisation, and long-acting reversible

long-acting reversible contraceptives including

Medha Gandhi Founder of

The wider availability of the single dose

response to the

emergency contraception pill is an example of the government's

Advisory, a health and development sulting group

intra-uterine devices and post-partum intra-uterine devices, the private sector is the major source of oral contraceptive pills as well as ECP and barrier methods such as condoms. Reversible contraceptives place the decision in the hands of girls and women, supporting their agency and reproductive autonomy to decide if they want to have children, when, and how many. A significant move

Earlier this year, the government included a single-dose regimen of Levonorgestrel 1.5 mg in the National List of Essential National List of Essential Medicines (NLEM). This list is issued by the Department of Pharmaceuticals to make medicines available at affordable costs and assured quality based on the disease burden of the people. It is meant to promote rational use of medicines with focus on cost, safety, and efficace. This more is safety, and efficacy. This move is significant because this is the preferred regimen for women using ECP and despite the annual sale of over 35 million tablets from sale of over 35 million tablets from private chemists and pharmacles, this was not price controlled, while the two-dose regime (of 0.75 mg tablets) has been in the NLEM since the inclusion in 2015. The emergency contraceptive pill Levonorgestrel 0.75 mg tablet was included in the National Family Planning Programme in 2003 but was later replaced by Levonorgestrel 1.5 mg tablet to be Levonorgestrel 1.5 mg tablet to be made available free of cost across made available free of cost across the public health system. The same pill in the private sector continued to be sold without a price control in the price range of 599-110. The two-tablet pack was price controlled at ₹22.53 per tablet by being in the NLEM. This has been a significant market disparity between what women want and what was affordable. India has reached replacement level of fertility, which means that the average number of children born per woman is such that the

born per woman is such that the population exactly replaces itself from one generation to the next n one generation to the next

without migration. This has been a result of the government's efforts to prioritise expanding contraceptive choices, increasing access to quality counselling, contraceptive services, and a focus on education as a pathway to a good quality of life.

There continue to be variations in the demand for contraceptive access and family planning across.

access and family planning across various regions, and the focus on ensuring access to information and counselling about contraceptive choices and seamless access across public and private sector is critical. The total private sector is critical. The total demand for family planning among currently married women age 15-49 years in India increased from 66% (2015-6) to 76% (2019-21). The unmet need for family planning decreased from 13% in 2015-16 to 9% in 2019-21. What this means is that while more women in India base more women in India have expressed a desire to use a traceptive either for delaying first birth, spacing pregnancies, or not having any/more children, there are still 9% (significantly lower than 2015-16) who desire a

lower than 2015-16) who desire a contraceptive but don't currently have access for a range of reasons. With research and technological advancements, contraceptive choices will continue to expand for men and women to respond to the unique needs for contraception. Policymakers need to continue to listen and respond to the needs of the woman and her partner across various life stages with critical decisions like these. This wider availability of the single dose emergency contraception pill is an emergency contraception pill is an example of the government's response to the choices women response to the choices women are making. With the recent introduction of the subcutaneous injectable contraceptive with the opportunity to expand self-care and the sub-dermal single rod contraceptive implant in the national programme, and this decision of price controlling the single dose ECP, conscious efforts are being made to sunport women are being made to support won in making informed choices.

The problem of landslides in Kerala

Reports and recommendations are aplenty, but implementation is tardy

S. Anandan

early a fortnight after two landslides gouged out the face of the Vel-larimala hill in Wayanad's Meppadi panchayat, killing more than 230 people in the foothills, the search continues

foothills, the search continues for the missing, estimated to be more than 130 people. This is a tragedy of epic pro-portions for Kerala, which has been battered by extreme weather events ever since the great flood of 2018. That year, 341 major landslides were re-ported in the State. Landslides have become a major hazard every monsoon since then, every monsoon since then, with Wayanad, Idukki, Malap-puram, Kasaragod, and Kozhipuram, Kasaragod, and Kozhi kode districts marked as, and proving to be, highly suscepti-ble to deadly landslides. About 75 people died in over-night landslides at Kavalappa-ra in Malappuram and Puthu-mala in Wayanad, situated six kilometres apart across the hills, in 2019. Puthumala is barely a few kilometres down the hill from the Chooralmala and Mundakkai wards of Mep-padi panchayat, which bore the brunt of the landslides on July 30 this year.

July 30 this year. As in 2019, the landslides As in 2019, the landshaes this year were also triggered by extremely heavy rainfall: 527 mm of rain in 48 hours. It is evident now that there was

is evident now that there was inadequate early warning. But the role of anthropogenic fac-tors in exacerbating the disac-ter cannot be discounted. The Kerala government em-barked on a mission to rebuild the State in the wake of the 2018 flood. The post-disaster needs assessment report envi-sioned a climate-resilient Ker-lat, which was to be built by ala, which was to be built by managing integrated water re sources, following an eco sen

sitive and risk-informed land sitive and risk-informed land use and settlement approach, promoting community-based disaster management, and integrating disaster risk reduction plans across sectors with technology and innovation. However, implementation has been tardy.

The 'room for river' project for flood management in the plains has not made any headway. Affirmative action to ensure eco sensitive land use re-

sure eco sensitive land use re mains a chimera, with the government biding time and a vast majority of the people op-posed to the idea of resettleposed to the idea of resettlement due to a deep distrust of the system. Unregulated con-structions continue to be a menace on the fragile hills in Wayanad and Idukki, with an eye on revenue from tourism. The India Meteorological De-partment and the Geological Survey of India have delayed upscaling their technical capa-bilities to give accurate, ac-tionable, and timely early warnings. A case in point is the endless wait for the instal-ation of a Doppler weather ra-lation of a Doppler weather rathe endless wait for the instal-lation of a Doppler weather ra-dar in Kozhikode to bring north Kerala, including Waya-nad, under coverage, Such a radar can give 'people-friend-ly' information such as proba-ble rainfall intensity, wind shear, and the probability of extreme weather such as a cloudburst. But this appears to be a tall order as Wayanad does not even have an adeqdoes not even have an adeq-uate number of rain gauges. But the government has

brought local bodies on board the disaster risk reduction ma-trix. As many as 260 local bo-dies were handheld by the Kerala Institute of Local Admi-nistration in putting together panchagat-level disaster manpanchayat-level disaster man-agement plans after some la-borious fieldwork. Each re-port contains the whole gamut of information pertain-

port contains the whole gamut of information pertaining to that panchayat. For instance, Meppadi, ravaged by the landslides in July, has published a report. To what extent this has been useful in fighting the disaster needs to be examined.

Nevertheless, the plan is sweeping in its coverage of the geomorphological features of the land, the people, the interventions on land, crops, safe routes, etc. It identifies the vulnerable spots and people, such as the differently abled, the bedridden, children, the aged, migrant workers, and those under palliative care. There are long lists of people to sound warnings and be the first responders in the event of a disaster. Officials say these panchayato fficials to make sense of the downscaled climate project the downscaled climate project data and maps, there is a need to ground truth the same.

While the disaster manage—

While the disaster manage ent plan should be frequent ment plan should be frequently updated, experts point to the need to integrate these individual plans while preparing district disaster management plans. There is now a fairly sound understanding of which areas are prone to disasters. While the government should urge the Central agencies to upgrade their systems in order to be able to provide accurate and timely weather accurate and timely weather alerts, it should also pay atten-tion to community-driven cliate monitoring systems

At the 2024 Paris Olympics, age was not a limit

Athletes ranging from II to 65 years old competed in the Games. The youngest athletes in the majority of events were women

Ford may discard super secret diplomacy of Nixon regime

Washington, Aug 13: President Ford stressed yesterday that while the style of his conduct of diplomacy would differ from that of his predecessor, the content of his foreign policy would be same as that of Mr. Nixon's. While declaring that he would continue to "support he outstanding foreign policy of President Nixon," he added that "it is my intention to deal openly with allies and adversaries." This suggested that Mr. Ford intended to discard the super secret diplomacy which was the hallmark of the Nixon Administration, a pattern of diplomacy which often alienated some of America's old friends even while it sought to gain new friends.

The underlying theme of Mr. Ford's address to a joint session of Congress last night, in relation to foreign affairs, was constancy and continuity. There would be continued collaboration with such loyal allies as Western Europe and Japan. There would be continued support for the "security, independence and development of our allies and friends in Asia." There would be

"security, independence and development of our allies and friends in Asia." There would be continued efforts to reduce tensions with China and the Soviet Union and persistent attempts to bring about a durable settlement in West Asia. bring about a durable settlement in West Asia. To all nations including the non-aligned Mr. Ford pledged a continuity "in our dedication to the humane goals" — in particular, he said that he would seek an international structure of trade and finance which would reflect the interdependence of peoples.

Return of the Foreign Hand

Conspiracy theories about Sheikh Hasina's ouster avoid the bigger questions in Bangladesh. What is needed is for Delhi to look ahead, deepen ties with the new regime

ONE OF THE more fascinating theories in the Indian media on the fall of Sheikh Hasina suggests that Muhammad Yunus, an 84-year old economist branded as a "Cla Agent", has led the overthrow of the mighty Awami League in Dhaka and outwritted its bliggest external supporter and the regional power, India. Seriously?

Conspiracy theories have long enjoyed great currency in the Subcontinent. They don't need proof and can't be disproved. Rulers in South has have resorted to the "foreign hand" theory whenever they faced trouble at borne. Conspiracy theories were the staple of Indian politics in the second half of the 20th century.

South Asia have resorted to the 'foreign hand' theory whenever they faced truble at home. Conspiracy theories were the staple of Indian politics in the second half of the 20th century. When she faced resistance against her authorizatanism, India Gandhi reliefoweby blamed the foreign hand, mostly the CLA, es the imposed Emergency in 1975, Indiara Gandhi reliefoweby blamed the foreign hand, mostly the CLA, es the imposed Emergency in 1975, Indiara Gandhi reliefower the reliefower of the contribution of the state of the reliefower of the contribution of the reliefower of the contribution of the reliefower of the reliefo was defenestrated in a successful no-confi-dence vote in the National Assembly in April 2022, Like Hasina, Imran Khan also thinks his efusal to give a base ("absolutely not" were is famous words) was what turned America

Initia amous whates year in the US military is looking for against him.

To be sure, the US military is looking for bases and facilities as it responds to the Chinese military challenge in Asia, But to sug-gest that the US so desperately needs bases in Bangladesh and Palsistan that it is organising coups would be outlandish. But then paranoia

Whether they realise it or not, in blaming the "foreign hand", the conspiracy theorists are indicting the Indian establishment for a major failure. If you say the

CIA conducted a coup next door, right under India's nose, which has a huge footprint in Bangladesh, you are accusing Delhi of missing the big moment in Bangladesh. A serious Indian post-mortem on the

origins and evolution of the Bangladesh crisis and

Delhi's management would

indeed produce valuable long-term lessons for India's

regional policy. However, it is important to remember

that no power, global or regional, can control politics in areas of strategic interest

does not need evidence to thrive. The coup theory also gives too much credit to the CIA. The South Asian lore about the CIA's prowess outpaces the agency's capacity, Consider the following: The CIA could not organise the outser of much-reviled President Nicolas Maduro of Venezuela in the recent elections. The USA is a constant of the country of the

following: The CIA could not organise the ouster of much-reviled President Nicolas Maduro of Venezuela in the recent elections. The US failed toou six the communist regime in Cuba, in power for more than 60 years. Both are in America's backgard.

The CIA is not the only one that inspires the fewerish imagination of South Asian conspiracy theorists. Our own external intelligence agency, R&W. Is biamed these days for any regime change in the neighbourhood.

Whether they realise it or not, in blamming the "foreign hand", the conspiracy theorists are indicting the Indian establishment for a major failure. If you say the CA conducted a coup next door, right under India's nose, which has a lunge footprint in Bangladesh, you are accusing Delbi of missing the big moment in Bangladesh. A serious Indian post-mortem on the origins and evolution of the Bangladesh ristis and Delbi's management would indeed produce valuable long-term lessons for India's regional policy, However, it is important to remember that no power, global or regional, can control politics in areas of strategic interest. And no government, however resourceful, is immune to utterly misreading the ground situation in other countries.

Instead of taking ormfort in conspiracy theories, the Indian strategic community must reflect on Hasina's stupy is about both triumph and tragedy. She survived against great odds, and saved the legacy of the nation's liberation from Padistan. Over the last 15 years, Hasina turned Bangladesh into a fast-growing economy and a "model" for other developing countries, including Padistan Over the last 15 years, Hasina turned Bangladesh into a fast-growing economy and a "model" for other developing countries, including Padistan Over the last 15 years, Hasina turned Bangladesh into a fast-growing economy and a "model" for other developing countries, including Padistan Over the less of the remover environment of the bitter legacies of Partition, settled the boundary dispute, ended cross-border termors, menhanced the page of the remov

tion to concentrate power in her hands and an inability to heal the deep political divisions in the country over its identity and history. Notwithstanding her tragic end, Hasina will go down as a truly historic figure in the evolu-tion of the modern Subcontinent. India has executive to the contract of the contract o

Notwithstanding her tragic end, Hasina will go down as a truly historic figure in the evolution of the modern Subcontinent.

India has every reason to regret Hasina's fall from power, but Delhi can't be detained by what happened in the last few days. It must lookahead and cooperate with the new rulers in Dhala to build on the solid foundation she constructed for the bilateral strategic partnership. Delhi must also signal empathy for the student movement that is seeking political liberalisation and wider economic opportunities. As it contributes to the immediate stabilisation of Bangladesh and its long-term rise, the US will remain an important partner for India.

Over the last few years, Delhi and Washington have moved close to each other on South Asian issues, In the last few months, there has been an important effort to reduce bilateral differences on Bangladesh Recall that Prime Minister Naendra Modi had introduced Hasina to President Joe Biden at the G20 summit in Delhi and encouraged Washington to reduce the political pressure on Dhaka. Despite the many questions about the Janaary elections in Bangladesh, the Biden Administration offered to cooperate with the new yovernment led by Hasina. The problem in the end was not between Delhi and Washington. It was about Hasina a pidly bosing touch with her people. Even a massive collaboration between the RWW and the CLA could not have stopped the political cock that was ticking for Hasina's unpopular rule.

Finally, the conspiracy theories in play to-duy are unlikely to undermine the deep structural convergence between In RRW and the Schavare under the senses in the Bebootton to reduce the deep structural convergence between In flate its waters. The

day are unlikely to undermine the deep struc-tural convergence between Indian and US in-terests in the Subcontinent and its waters. The current crisis in Bangladesh and the gather-ing storm in Burma demand more intensive India-US consultation and cooperation in the Bay of Bengal and its littoral.

A caveat in the jobs data

Considering the methodological limitations of employment datasets, it is surprising that claims of rapid growth of jobs should be made

AMITABH KUNDU AND P C MOHANAN

STUDIES BASED ON the KLEMS data are be-STUDIES BASED ON the RLEMS data are being widely quoted to counter claims of poor
job creation in the country. This database
has been developed as part of an international project and has a very respectable
parentage, nurtured by scholars from the
Delhi School of Economics and ICRER since
2009 and housed in the Reserve Bank of
India since 2002, Hence, it is necessary that
we examine the methodology of generating the data, going into sectoral details and
original sources.

we examine the methodology of generating the data, going into sectoral details and original sources.

The KLEMS database consisting of dato no capital (KJ, labour (L), energy (E), material (M) and services (S), currently available for the period 1980 to 2024, is meant to provide a "measurement tool to monitor and evaluate productivity growth at the industry level as well as the aggregate economy'. It uses data from different rounds of the employment-unemployment surveys (EUS), the periodic labour force surveys (FUS), the Pacifocal Industries in the absence of yearly data from the National Statistics and the Annual Survey of Industries. In the absence of yearly data from the National Statistical Office, the available data are used as benchmarks and interpolated for other years.

As per the methodology, the EUS and Interpolated for other years.

As per the methodology, the EUS and latistical office, the available data are used as benchmarks and interpolated for other years.

As per the methodology, the EUS and interpolated for other years, on the provide the absolute number of workers, the estimated worker-population ratios (WPR) for the four groups from the survey are multiplied by the total population ratios (WPR) for the four groups from the survey are multiplied by the total population ratios (WPR) for the four groups from the survey are multiplied by the total population ratios (WPR) for the four groups from the survey are multiplied by the total population ratios (WPR) for the four groups from the survey are multiplied by the total population ratios (WPR) for the four groups from the survey are multiplied by the total population ratios (WPR) for the four groups from the survey are multiplied by the four groups from the survey are multiplied by the four groups from the survey are multiplied by the four groups from the survey are multiplied by the four groups from the survey are multiplied by the four groups under the Ministr Welfare (MoHFW)

under me Ministry or neatm and ramy. Nedfare (MoHY) (all the methodology segment of the RBI report, it is noted that for 2017-18, 2018-19 and 2019-20, the all-India figures for the employed persons are taken from the Economic Survey 2021-22. For 2020-21 onwards, pop-lution projections are available for males and females only, and consequently, a uni-form growth is applied for projecting popu-lations in rural and urban segments. The worker numbers are then distributed among the industry groups, considered in KLEMS, according to their shares in employ-ment as in PLIS.

Importantly, the population figures pro-

ment as in PUS.
In portantly, the population figures projected by MoHPW are on the higher side due to a sharp decline in fertility rate during the period from 2010 to 2020. This implies that the total labour and workforce, obtained through the multiplication of the projected population with the WFR, would be overestimated. The estimated runs of population would be higher also because it is assumed to grow at the same rate as the urban population while, empirically, the rate in rural ar-

bas simuth less, Since WPR in rural areas is higher than in urban areas, the total employment speciated in the years of the twenties would work out as higher than the actuals. The forgoing explanation clearly shows that the RBI does not produce any employment figures independently. The UPSS-based WPR is used on a projected population to obtain the numbers. There is a significant drop in WPR, as per UPSS, from 2011-12 to 2017-18, as we shift from EUS to PLFS and the KLEMS assumes there is no Problem of temporal comparability. The WPR however, has gone up significantly for rural women with some increases also for the other population segments, in the subsequent years. These WPR values applied on somewhat higher population estimates, as discussed above, would produce inflated employment numbers.

In the KLEMS database, employment in agriculture increased from a near staggiant.

iculture increased from a near stagnan crore before 2018-19 to 25 crore in 2022

agriculture increased from a near stagnant 20 crore before 2018-19 to 25 crore in 2022-23. Correspondingly, the service sector emboyment went up from 172 crore to 20.2 crore. Manufacturing employment grew from 5.5 crore to 6.3 crore.

The number of workers would go upsystematically due to the population increase and the methodology of projection even when the WPR remains the same. Similarly, manufacturing employment goes up although the ratio of manufacturing to total workers goes down, as per the PLFs. It is important to note that the employment data includes those with subsidiary employment, implying the inclusion of persons having a tenuous connection with work. A large majority of them are engaged as unpaid family workers. Using EUS/PLFs data along with the projected population to claim employment generation would thus be misleading, without any reference to the nature and quality of work.

A study by economists at the SBI compans the projected total employment based on the Annual Survey of Illinicomproment and on the Annual Survey of Illinicomposated and the second and the second

quality of work.

A study by economists at the SBI compares the projected total employment based on the Annual Survey of Unincorporated Sector Enterprises (ASUSE) data with the numbers available in the BBI KLMS database. The ASUSE survey covers a subset of all unorganised enterprises and excludes those in construction, the corporate sector and government, besides those registered as factories and cooperatives. The surveyes—that is the compared to the compared of the compare

rior for employment data. Independent estimates from these two sources do not match for reasons well known. Similarly, data on the registration of MSME units in the Udyam portal usually does not imply new job creation, nor do the monthly healings in EPFO subscription mean additional employment generation. Considering the methodological limitations of these data, it is surprising that claims should be made of a rapid growth of employment, that too of decent jobs.

A port of no return

In Great Nicobar Island, a port was won, a wildlife sanctuary lost

PANKAJ SEKHSARIA

IMAGINE A LARGE patch of low-lying land on the outskirts of any of our ever-expanding metros. Though registered in government records as a lake, it has been dry for a few years because of poor rains, By a sleight of hand well-known to the Indian public, the land is taken over by a builder, a high-rise is constructed in double quick time and occupants move in with much fanfare. The rains return, land becomes lake and the residents are manoned. The aggrieved home-owners go to court, which, in turn, asks the government to fix responsibility. The government sets up an enquiry committee which comes back with an ingenious solution: The lake that was a lake till recently was never a lake in the first place. And now that there is a building here, how can this be a lake anyway? If migratory birds were visiting, it was their illusion that this was a lake, and the bird sanctuary here had been denotified many years ago anyway.

Afarce (or should we call it subterfuse?)

years ago annyway.

A farce (or should we call it subterfuge?)

much bigger than this has just been played out in the Great Nicobar Island as reported by this newspaper ('Nicobar port plan: Flagged in no-po zone earlier, now in permited area, IE, July 29).

At the bayer of the matter and two reports of the contract o

Flagged in no-go zone earlier, now in permit-ted area', IE, July 29).
At the heart of the matter are two related aspects; First, a category of land labelled by Indian law as coastal regulation zone (CRZ)-IA and second, the environmental clearance

granted by the Ministry of Environment, Forests and Climate Change (MoEFCC) to a Rs 42,000 crore transshipment port in Great Nicobar Island's Galathea Bay. Coastal areas that are notified as protected areas (wildlife sanctuary and national park), with man-

that are notified as protected areas (wildlife sanctuary and national parts), with mangroves, corals, turtle-nesting beaches, seagrass beds and nesting grounds of birds
among others, are included in CRZ-IA.
Significantly, they are out of bounds for large
construction projects such as the port in
question in Great Nicobar Island.

The beach at Galathea Bay, the site of the
proposed port, is one of the most significant
nesting sites in the Indian Ocean of the giant
leatherback, the world's largest sea turtle, in
addition to three other species that also nest
here. The project site also has coral colonies
and mangroves as mentioned in the project's
environment impact assessment report; the
adjoining coastal forests have important
nesting sites of the endemic Nicobar
megapode. It was to conserve this richness
and diversity that Galathea Bay was proposed in 1997 as a wildlife sanctuary over 11
sq km of sea, coast and coastal forests. This
was clearly CRZ-IA and a port was out of the
question here.

But the path was cleared first and fore
But the path was cleared first and fore
But the path was cleared first and fore-

question here. But the path was cleared, first and fore-most, by denotifying the sanctuary in January 2021 even though the turtles con-tinue nesting here, Put together, the

Galathea Bay WLS should never have been de-notified, the MoEPCC's environment appraisal committee (EAC) should never have recommended the project for clearance and the MoEPCC should never have cleared the project that it did in November 2022. This was then challenged in the National Green Tribunal, which even as it failed its mandate spectacularly, could not help but note that the project site had 20,668 coral colonies and "that part of the project is in (RZ-I-Aarea where Port is prohibited".

The NGT then appointed a high-powered committee (FIPC) headed by the Secretary, MoEPCC, with a ley member being the Chief Secretary (CS), Andaman and Nicobar Islands, to look into the matter. It did not strike the NGT that the CS is the chairman of the board of directors of the Andaman and Nicobar Islands integrated Development Corporation Limited (ANIIDCO), the project proponent whose environmental elearance was under question or that the McEPC was the very agency that had granted this clearance. They would be sitting now in judgement on a challenge to their own actions.

The problem however remained unresolved because the project site was still CZZ-IAbased on scientific records, in reports of the Andaman and Nicobar Coastal Zone Management Authority and the National Centre for Sustainable Coastal Management

(NCSCM) and, indeed, the order of the NGT constituting the HPC. A port still could not be allowed and a solution was still needed. The workaround came via a ground-truthing survey the NCSCM is supposed to have conducted recently. Read carefully the following statement from ANIDICO's allidavit in the NGT that was also the basis of the IE report: "The HPC came to the conclusion that in the Report submitted by the NCSCM, it has been determined that construction of port is permissible in CR2-HA. The NCSCM, hence, concluded that no part of the project area is falling under CR2-HA. The haves the second of the project area is falling under CR2-HA. The turties still nest here, the mangroves still stand, the megapodes still forage and breed here and 20,688 coral colonies still flourish in the adjoining waters. This is still CR2-HA, but now that the port has been approved, this cannot be IA. It should never have been IA in the first place. The cart was unfortunately before the horse all along but this has been corrected now.

The hurtling into a legally-sanitised abyss can continue now with a peaceful, law-abiding mind.

abyss can continu law-abiding mind.

LETTERS TO THE EDITOR

AN ACT OF DEFIANCE

AN ACT OF DEFIANCE
THIS REFERS TO the article, Supers Bid.
Aleroi more ways than one (IE. August
13). Undoubtedly, one of the most representative moments of these games
would be Sifan Hassan donning the hijab on the podiam during the closing cermoney while receiving the gold medal
for the marathon category at the
Olympics. In the charged nationalistic amosphere of France, and by extension
Europe, such an act of defiance. France
banned its athletes from wearing this
gament at the opening ceremony— is
inspiring. That the world does not require
such defiance to register discrimination
is ad-flings must charge.

Animesh Rai, Noido

OVERHAUL NEEDED

OVERHAUL NEEDED
THIS REFERS TO the report, Toctor's rape-murder: Manta gives police a weekto resolve case (IE. August 13). The rape and murder of a resident doctor in a Kolkata has put the spotlight on the safety of women in hospitals. Doctors are now protesting across India, asking for a central law to protect health-care workers, citing rising attacks. But is it he lack of a specific hav that is responsible for attacks on health workers and healthcare facilities? It is estimated that the likelihood of assaults against health

workers is four times greater than that against professionals in general work-places. Several risk factors contribute to violence against doctors, including un-derstafling, lengthy waiting times for pa-tients and poor quality of healthcare services. An overhaul in the system where neither the caregiver nor the pa-tient is exposed to undue vulnerability is the need of the hour. tient is exposed to und is the need of the hour.

THE SAME OLD

THE SAME OLD
THIS REFERS TO the editorial, 'After the Olympics' (1E, August 12). A postmortem on our poor medal tally after Olympics has become routine — we learn similar lessons each time, india's overalt medal tally of 41 at all the Olympics explains how we wallow in false pride. Our performance at the games has only deteriorated over the past 25 years: from the best-ever 50th place in 2008, we have slid to our low-est-ever of 71 in Paris, a stark reflection of the awful statu of sports in the most populous country. Rather than investing extensively in the creation and updating of sports facilities around the country, integrating sports and cademics to draw more youth to sports, we just make bids to host the most expensive sporting extrawaganza in 2036. sporting extravaganza in 2036. RAMNATH GOENKA

BECAUSE THE TRUTH INVOLVES US ALL

It is here. It calls for a new language, a different politics

Whether the Court had ruled this way or not, the post-Mandal moment was already here and needed a response from academia,

policymakers and social

First, if the reservation policy represented an urgent need to intervene in casterelated asymmetry, how do we tweak that policy from time to time in order to

ensure that it redresses the more disprivileged from among the intended beneficiaries? Two, as Indian society moves away from an

easily comprehensible overlap of caste, class and

power, how do we address the new labyrinths of power asymmetry? Reservation for EWS was a smart way to avoid this question. But the question is bound to re-

urface. Three, do we expect

the SC, ST and OBC to b

seen as permanent blocs?

SUHAS PALSHIKAR

KEEP SOCIAL PEACE

Yunus-led dispensation should mitigate atmosphere of fear among Bangladesh's minorities, ensure their protection

MEDIATELY AFTER BANGLADESH'S agitating students declared that they wanted MMEDIALELY AF IER BANALADESH'S agittaing students declared that they wanted Muhammad Yunus to lead the country's intering overment, the 84-year-old Nobel Laureate issued an appeal: "Let us make best use of this victory. Let us not let this slip away because of our mistakes. Please refrain from violence." These words spoke of the enormity of the task before the widely-respected economist, banker and social entrepreneur: Uniting a bitterly-divided country and restoring its democratic fabric following peneur: Unting a outerly-divided country and restoring its democratic tains consoving the ouster of Sheikh Hasina in a mass upsurge. If Hasina's 15-year of rule was tainted by the arrests of Opposition leaders, suppression of dissent and crackdowns on free speech, the protests against her regime fiseled concerns of a return to political instability and reopen-ing of past scars—many of them fellowers of Bangdaedsh's liberation movement, some go-ing even further back to the Partition of the Subcontinent. Events in the week since he has taken over as the head of the interim government, have underlined that applying the healing touch and holding social peace should be Yunus's first priority. Especially worrying are reports of more than 200 attacks on Bangladesh's largest religious minority, the Hindus— at least five members of the community have lost their lives and the properties of several others have been vandalised since August 5. Bangladesh's interim head of government has reiterated his call for peace. But words of calm won't be enough. Yunus will have to arrest

reiterated his call for peace. But words of calm won't be enough. Yunus will have to arrest the collapse of law and order and ensure that the country's minorities are protected. Hasina became the face of the secular version of Bangladesh's polity, in the face of the rising tide of Islamic fundamentalism and even as the country witnessed episodes of low-intensity communal tension. The protests against the Awami League regime began of white country's campuses, But so widespread was the discontent, the movement encompassed most sections of Bangladesh's society, including the Islamists. Even in the early phase, it was apparent that the political was becoming intertwined with the communal. The turnoid has continued even after Hasina's light from the country. The Hindse, traditionally Awami League supporters, have become soft targets during the retaliation against the excesses of the Hasina regime. Most of the attacks have taken places in rural areas and along Bangladesh's sorder with India. The absence of the police—most of them have fled their Rangladesh's border with India. The absence of the police—most of them have fled their stations for fear of retribution by the protestors—seems to have emboldened other miscreants. It has also added to the vulnerabilities of the minorities.

Bangladesh's interim government comprises academics, civil society activists, student leaders and former government officials. By all accounts, the Awami League, or its supporters, are missing. Yunus was persecuted by the Hasina regime, which weaponised labour

laws to convict the father of micro-finance. But in steering Bangladesh past a difficult period, he must be large-hearted. Hasina has made an ignominious exit. Now, not even the party's worst critic will deny the stakes of the Awami League in the future of Bangladesh's polity. The wounded nation needs representatives of all its parties to put their heads together and apply the salve. It's up to Yunus to make the first move.

FAILING HER

Protests against rape and murder of a doctor in Kolkata point to chasm between intent and outcome on women's safety

TRAINEE DOCTOR walks into a seminar room after a 36-hour shift to rest, the only place available in the absence of a duty room. The next morning she is found dead, her body bearing marks of grievous sexual assaulte. A junior nurse nearly to death. She lives for 41 excrudating years afterwards in a vegetative state. Separated by decades and clicks, the fator these two women — the 31-year-old doctor in Kolkata's staterun RG Kar Medical College who was found dead on August 9, and Aruna Shanbaug, assaulted in November 1973 in Mumbai's KEM Hospital — shows that when it comes to women's safety, not much has moved in India despite the loud assertions of "nari shalati". In Kolkata, amid ongoing investigations, a civic volunteer has been arrested Issues flagged year after year have surfaced — CCTV cameras that don't work, absence of on-call rooms with wash rooms, ill-lit areas that women staffers prefer to avoid after dark and inadequate security measures that have made doctors increasingly vulnerable to violence. The larger failure is the clusare between intention and outcome when it comes to wennen's safety. Promises only place available in the absence of a duty room. The next morning she is

ure is the chasm between intention and outcome when it comes to women's safety. Promises ure is the chasm between intention and outcome when it comes to women's safety. Promises made in the aftermath of the horrific December 16 gangrape incident in 2012 have largely been reduced to lip service: The 100 per cent increase in the budgetary allocation of the Nirbhaya Fund for 2024-25 notwithstanding, data shows that between 2013, when it was et up, and 2022, less than half of the allocation had been used. Society and institutions will need to keep up with changing realities. According to the All India Survey on Higher Education, in 2020-21, the ratio of women to men studying medicine was 1:1. In nursing, there were 310 women for every 100 men. Yet, implementation of the Sexual Harassment of Women at Workplace (Prevention, Prohibition, Redressal) Act, notified in 2013, has been half-hearted: In May 2023, the Supreme Court called out "authorities/management/employ-ore." for failing to require a "sea" in december of the proper for section to require a "sea" and every work of horse for second ers" for failing to ensure a "safe and secure work place" for women.

If this is a moment for the administration of RG Kar Medical College to confront ques-

in as a moment or or administration to read and instruction and staff; it also calls for a wider introspec-tions about its responsibilities towards students and staff; it also calls for a wider introspec-tion. There is a fundamental problem in the way issues of women's safety are addressed. The chamour for capital punishment, or "encounter", as TMC party general secretary Abhishek Banerjee has suggested; shows atone-deaf reliance on instant justice. There is no consolation that can mitigate the pain of the bereaved; no atonement for acts of senseless violence that cut short lives full of promise. The only lesson that can be taken away from this is to make good on promises of empowerment and equality and a commitment to the due course of justice.

POLITICIAN & TECH BRO

Donald Trump's interview with Elon Musk was all predictable, all boring

Was all predictable, all boring

ImKARDASHANS CROWN is safe, Bigg Bos will continue to thrive. The great challengers to "reality" TV — disgranted billionaires playing victim — are still a force to rection with in politics, business, conflicts and many things besides. What they are no its entertaining, Beyond the politics, that was the most obvious takeaway from Tesla, SpaceX and X/formerlyTwitter) boss Elon Musk's two-hour interview with the man hoping, once again, to be US President, Donald Trump, streamed on the former's social media platform on August 13.

The essence of the conversation was encapsulated in the first few minutes — with constructive the social media platform and a glancing acquaintance with facts. The live stream was delayed by about 40 minutes and Muske blasmed the glitch on a distributed denial-of-service attack — the server was flooded with users in an attempt to cause a crash. He provided no evidence for this claim. Trump, for his part, marveled at the number of users, perhaps confusing curiosity for support. Both abused their bete noires — Joe Biden, Kamala Harris, Democrats and migrants for the politiciar, regulation, taxation and those who im-

hars contasting curiously of support, own adoeset men't over londers—Joe nicer, harmals Harris, Democrats and migrants for the politician; regulation, toxation and those who impose them for the tech bro. It was all predictable. More importantly, it was all boring. Both Thump and Musik have gone beyond their core competence, to great success. From real estate to TV to the White House; from South Africa to space, and perhaps to Mars. They are adept at controlling news cycles and grabbing eyeballs. But the art of conversation is just a little more difficult than demagaguery. And not everyone can be a reality star, a la the Keatheline. Exhibit this influenced of the interest that for the controlling stars. Kardashians. For both the influencer and the interviewer, that's good news.

THE RECENT RULING of the Supreme Court allowing states to sub-classify SCs and STs for the purpose of preferential treatment in reservation has produced two pronounced responses: Political parties are trying to duck the issue by not committing themselves while most proponents of the reservation policy are upset about and critical of the ruling. Both the silence and the criticism represent the unease with the post-handal moment. The ruling it self, and the various judgments, are characteristic of the concerns and confusions of the

set, and the various judgments, are charac-teristic of the concerns and confusions of the post-Mandal moment.

Mandal – understood as caste politics – has had two connected but separate trajecto-ries: One pre-Mandal and the other occa-sioned by the Mandal Commission Report. ries: One pre-Mandal and the other occa-sioned by the Mandal Commission Report. The former is a historically anchored life of de-mocratisation, involving fong-term struggles against caste. In this sense, the life of Mandal had its origin in the writings and work of Jyotiab Phule and Peripar. This pre-Mandal life of the idea of Mandal was made possible by BR Ambedkar, Subrequently, and as a conse-quence, the question about the pickholadas (backward castes) drew attention since 1967 in the universe of deterroral rollities.

in the universe of electoral politics.

The other life of Mandal revolved around one content for of Managar revowed around the question of reservation—this was one that shaped post—1967 politics in the north. This second life of Manada cluminated in a compli-cated mix. Having hit the headlines in the 1990s, by the turn of the century. Mandal pol-itics in the electoral arena had run its course. But by then, a noisy consensus was shaped among parties and political elites that com-petitive and aerressive fortification of the positive and aerressive fortification of the

But by their, a noisy consensus was shaped among parties and political elites that competitive and aggressive fortification of the reservation regime was the only and sufficient flag-bearer of the social justice policy. The absorption of Mandala politics by various parties, notably the BJP, and after a quarter century, now by Congress, has been accompanied by the reductionist approach that numerical representation is an adequate response to a more complicated social reality of injustice.

In the pre-life of Mandal, questions of government policy were intrinsically based on the larger goal of "anti-caste" politics—that is, on the goal of doing away with caste-based injustice and unfairness. This was the most valuable contribution of Ambediar to the discourse of social justice and democracy. By the turn of the century, that umbilical cond with more fundamental issues got severed. This de-more fundamental issues got severed. This de-

more fundamental issues got severed. This de-velopment meant that rather than Mandal

3.0, we entered into a post-Mandal moment where the anti-caste context got lost and concern with reservation got distorted. Mandal as an idea represented three sets of contradictory and yet complementary elements. One, it set off a critical examination of our public sphere in terms of mirror representation and also gave rise to the substantive question of a fair share in power. Though connected, these are distinct sides of the same issue: One looks at easy solutions and the other warns us about the monumental challenge. sue: One looks at easy solutions and the other warns us about the monumental challenge. This made us aware of the narrow social base of our elites and at the same time, moving farther from crude enumeration of everyone's caste background, this element drew attention to the asymmetry of power.

Two, the Mandal moment emphasised the sead to exceed the

Two, the Mandal moment emphasised the need to fortify the reservation regime — by moving beyond SCs and STs, by addressing questions of reservation in promotion and by rejecting the reservation from the same time, the Mandal moment also sensities of policy discourse to the need to permeate actual policy choices with a concern for social justice in the broader sense. The emphasis on measurable of the reservation of more for profile. justice in the broader sense. The emphasis on reservation of them led to eavy escapes for poli-cymakers. The question of policy based on so-cial justice was easily eclipsed in the shadow of the bureaucratisation of the reservation regime and consequent endless recourse to the judiciary. Three, in the realm of mobilisation, the Mandal moment strengthened the politics of

Mandal moment strengthened the politics of building social blocs. This could enrich democ racy and also enable the backward commu racy and also enable the backward communities to engage in politics beyond localised wore banks. But simultaneously, the Mandal moment also underscored the aspirations of individual castes leading to single caste identities as the bases of formation of perpetually competing political groupings, in the case of each of these three elements, thus, the possible gains were often entertalised by short-term and cosmetic tactical advantages.

Much of the disappointment with the SC ruling emanates from a comfortable security in continuing to recognise caste blocs that made sense half a century ago, it is believed that various legal fortifications and expansions to the existing reservation regime are adequate state responses to pacify the Mandal energy without having to destabilise the social equilibrium of power. By opening up the pos-

equilibrium of power. By opening up the pos-sibility of regrouping of caste blocs and by ask-

ing (perhaps as obiter dicta, and even juridi-cally unnecessarily) uncomfortable question "By periaps as obiter dicta, and even juridi-cally unnecessarily) uncomfortable questions about who benefits from reservation and by employing the clumsy concept of creamy layer, the ruling has thrown up crucial ques-tions.

ns. Whether the Court had ruled this way or not, the post-Mandal moment was already here and needed a response from academia policymakers and social activists to three is not, the post-Mandal moment was already here and needed a response from academia, policymakers and social activists to three issues. First, if the reservation policy represented an urgent need to intervene in caste-related asymmetry, how do we tweak that policy from time to time in order to ensure that it redresses the more disprivileged from among the intended beneficiaries? Two, as Indian society moves away from an easily comprehensible overlap of caste, class and power, how do we address the new labyriniths of power asymmetry. Reservation for EWS was asmart way to avoid this question, But the question is bound to re-surface. Three, do we expect the SC, ST and GBC to be seen as permanent blocs? Democratic politics will invitably bring internal political divisions in these administratively approved blocs. Is our politics ready to imagine and shape new social blocs that will attend to both socio-economic and democratic compulsions that lead to disintegration of the existing blocs?

The responses are bound to be tentative, pragmatic and evencrude. But responses will surely be needed. Consider the existing challenges. Among many castes from SCs and tribes from STs, there is a long-standing and deep concern over their condition. This results in distrust and competition within the SCST population. Most states have already grouped OBCs into sub-categories in order to allay the fears of "more backward." A number of politically strong agrarian castes are waging struggles for reservation in response to their deteriorating condition in the material sphere.

These and similar challenges suggest that issues will have some continuities but many discontinuities from the Mandal moment and, similarly, the frameworks to define the issues and analyse them will have to be freshly worked out. While the language from the Mandal moment and, similarly, the frameworks to define the issues and analyse them will have to be freshly worked out. While the language from the Mandal moment and, similarly the frameworks to define the issues a

WHEN GURU DUTT MET PLATO

In his centenary year, making sense of the director's cinematic subversions

SUMANA ROY

EVERY SEMESTER, CJJRJ. Dutt visits my classroom. He comes in unexpectedly, like he does
in the film Pyouso (1957). My students haven't
heard of him. He'd been alive, he'd have been
99, older than their grandparents. I had to turn
to him for help with explaining Plato's
"Allegary of the Cave", a text that is not commonly read in a Creative Writing; classroom,
but I had my reasons—I wanted them to understand the dialogic from through two very
old text, The Republic and the Bhagwad Gita.
I like Socrates said to Clasoon, I askmy students to let the classroom become a cave.
"Imagine that the cavern has a mouth that
opens to the light above, and a passage exists
all the way down to the people. They have
lived here from infancy, with their legs and
necks bound in chains. They cannot move. All
they can do is stare directly forward. Imagine
that far above and behind them blazes a greatfire." What these "captives" see is shadows,
which they take to be the only possible ruth.
We continue reading Shawn Eyer's translation in which Socrates says, "Imagine one of
them is set free from his shaddes... What do
you think his reaction would be if someone
informed him that everything he had formerly
known was illusion and delusion, but that
now he was a few steps closer to reality, oriented now towards things that were more authentic, and able to see more truly?... Would EVERY SEMESTER, GURU Dutt visits my class

Whose history is this, and whose conditioning? It is as much the struggling poet Vijay's history as it is the Indian nation's, then only 10 years old, confused between materialism and the spiritual life necessary for art and calm. The nation and its new culture are unable to give him a home, a stage, where the moneyed publisher stands. Dutt's is also an allegory of the cave — it is a rejection of an idea of poetry, of the stage The poet has come in like the ence, a 'common man'

he, rather, believe that the shadows he for-

he, rather, believe that the shadows he for-merly knew were more real than the objects now being shown to him?"

I play the song "Yeh duniya agar mil bhi jaaye toh kya hai", as if to illustrate Plato's al-legory, Guru Dutt's name in he film is Vijay, meaning "victory", used with characteristic melancholic irony, for he is a poet whose po-ems are ignored, and whose imagined death brines more commerce than bic life. In the ems are ignored, and whose imagined death brings more commerce than his life. In the song, he stands with his arms outstretched, a silhouette that Dutt would repeat in "Jaane woh kaise log the junke pyar ko pyar mila" in the same film, almost as if he were ploughing the light. The publisher, Chosh, wealthy, pow-erful, controller of careers and destinies, is on the dais in the auditorium. Such is the architec-ture of conditioning that. If ture of conditioning that, like the people in Plato's cave, the audience's back is towards the

Plato's cave, the audience's back is towards the poet and the source of light. By interchanging the location of the two — of the poet behind the audience and the publisher on stage — Dutt challenges our habit of thought while showing us how commerce dominates and displaces both art and the artist. Yiga's poems are rejected by publishers and his family, his girlfriend leaves him to marry Ghosh. Goaded by the prostitute who loves Vijay and his writing, Ghosh publishers Vijay's poems, hoping that news of the poet's death might push up sales. This is the duniyu

— on the dais — that Vijay wants to burn. What is being rejected? Mehlon, tukhton, tuqion, samqi, daulut — irches, fame and success. How does it matter if this world is won — yehduniya agar mil bhi janye toh kya hai? Dutt subverts this in every way he can — notice how the "spotlight" is on the publisher, while the poet sings in the darkness of the auditorium.

Whose history is this, and whose conditioning? It is as much the struceling noe? which

tioning? It is as much the struggling poet's his tory as it is India's, then only 10 years old, con tory as it is mina's, then only Tuylear's oid, con-fused between materialism and the spiritual life necessary for art and calm. The nation and its new culture are unable to give him a home, a stage, where the moneyed publisher stands. Dutt's is also an allegory of the cave—it is a re-jection of an idea of poetry, of the stage. The poet has come in like the audience, a "com-

poet has come in like the audience, a "common man". He stuns them, not like less shades pear's Titania, but into contemplation into reflection, as every poem must.

As such a moment, as Plato and Dutt cormonate each other the Creative Writing classrooms il blerated of the worship of "craft" and other common such cannow be spond the chatter of reviews, agents and publishers to the philosophical: How williad a poet who says "Mere same see hatao yell-duniya" write about the world, this duniya?

The appointment of S 5 Dhanos, as the new chief secretary of the state, has been finalised. Both Subramaniam and Dhano have been asked to takeover their jobs on August 16.

Editorial

Step down

For the sake of a fair investigation, Madhabi Puri Buch must resign

Madhabi Puri Buch must resign

ot since the Harshad Mehta scam of 1992
has India's securities regulations and
oversight come under such scrutiny. The
Securities and Exchange Board of India (SEB),
which was established as a statutory body that
year – it was constituted as a non-statutory body
in April 1988 through a resolution of the Government of India – now faces allegations of bias and
conflict of interest right at the top. The stakes are
much higher with the Indian stock market now a
\$5.3 trillion financial powerhouse. Over the
years, SEBI has put in place robust systems of
checks and balances that have constantly evolved
to ensure that India's securities market and financial system gained the reputation of being one of
the most reliable globally. However, the accusations of a conflict of interest levelled by New Yorkbased short-seller Hindenburg Research against
SEBI chairperson Madhabl Puri Buch in the conduct of the ongoing investigations against the SEBI chairperson Madhabi Puri Buch in the conduct of the ongoing investigations against the Adani Group, the Ahmedabad-based global infrastructure to FMCG major, for alleged stock price manipulation and corporate maifeasances, have cast a shadow on the statutory regulatory body. The main conflict concerns investments made by Ms. Buch and her husband Dhaval Buch in obscure offshore funds based in two tax hornes, Bermuda and Mauritius, where Adani Group Chairman Gautam Adani's brother Vinod Adani had allegedly also made investments. A sewens, Bermuda and Mauritus, where Adani Group Chairman Gautam Adanis brother Vinod Adani had allegedly also made investments. A second conflict arises over the Buchs' consultancy firms in Singapore and India that the couple said were used by Mr. Buch to advise "prominent clients in the Indian industry" since 2019. It is not clear if some of them are SEBI-regulated. The Buchs claim that these firms "went dormant immediately" upon Ms. Buch's acceptance of the whole-time membership on SEBI's Board. However, Hindenburg, in its rebuttal to this response, claims that not only was the Indian entity functioning but it also clocked revenues of about \$3,00,000 between financial years 2022-24.

This is an unprecedented case with wide ramifications where the Indian financial regulator's top appointee is directly involved. The Adani Group has been under SEBI investigation for charges related to stock market manipulations for the past 18 months. SEBI has said that 23 out of the 24 charges under investigation have been completed. Whether or not Ms, Buch influenced investigations or decisions involving the Adani Group, the real issue is that there can be no room for any lingering doubts about her conduct. It would be in the fitness of things for Ms. Buch to resign from her position to ensure a thorough investigation into the allegations against the Adani Group. After all, the integrity of India's securities regulatory body itself is at stake.

Single digits

India needs to broaden its sport base for success in Olympics

India needs to broaden its sport base for success in Olympics

India's return of six medals from the just-concluded Paris Olympics can be termed underwhelming at best. The nation secured one silver and five bronze medals, down from seven at Tokyo 2020 that included a gold and two silvers. At a time when the country is looking to diversify its sporting excellence, has found exuberant support from the government and big corporates, and was aiming for a double-digit medal yield, the Olympic fortnight belied expectations. There were indeed new heroes – shooters Manu Bhaker, Sarabjot Singh and Swapnil Kusale, and wrestler Aman Sehrawat are now household names. The men's hockey team finishing on the podium for a second straight time and Neeraj Chopra adding a silver to his historic javeling old from Tokyo are top-notch efforts. But the dependence on a select few to repeatedly deliver, he near-zero presence in disciplines such as swimming and gymnastics, and wrestler Vinesh Phogat being disqualified for being above the weight threshold cast a dark shadow. The need of the hour is thus to broaden the base, increase participation and distribute funding more equitably to usher in a grass-roots revolution. The onus is also on the Union Sports Ministry to bring errant federations – often dens of nepotism and corruption – in line with the National Sports Gode, fix accountability and decentralise governance.

corruption — in time with the National Sports Code, fix accountability and decentralise governance.

As much as the Olympics is about winning and the shaping of national identities, it is also the greatest stage on earth to showcase the ritumph of human will. This was best exemplified by the Netherlands' Sifan Hassan, the first since Emil Zatopek in 1952 to collect medals in 5,000m, 10,000m and marathon, Kenya's Faith Kipyegon, the first woman to win three consecutive 1,500m titles, Cuba's Mijain Lopez, who won a fifth individual gold on the trot in 130kg Greco-Roman wrestling, Novak Djokovic, who at 37 and with a surgically repaired knee, won the elusive singles gold in tennis, and Algerian boxer Imane Khelif, who braved incendiary attacks on her gender to rise to the top. Sweden's Armand Duplantis broke the men's pole vault record for an astonishing ninth time (6,25m) while swimmer Katle Ledecky, gymnast Simone Biles and hurdler Sydney McLaughin-Levrone achieved transcendence by stretching their numbers to nine, seven and four Olympic golds, respectively. France did well as a host, winning 16 golds, its best figures in a century. The star was 22-year-old swimmer Leon Marchand, who bagged four golds to position himself as the best of this generation. Athletics, in the post-Usain Bolt era, was on the lookout for one such champion, but as Paris proved, that is a tough act to follow.

CM C

The shock-effects of South Asian tumult

rom the start of this decade, India has received one shock after another in its neceived one shock after another in its neceived in the first part of the first part of the first part of the coup in Myanmar and the Taliban takeover in Afghanistan, in 2022 there was the ouster of Prime Minister Imran Rhan from office in Pakistan and riots that pushed Gotabaya Rajapaksa out of the country in Sri Lanka. Since then there have been some other events — the dramatic electoral change in the Maldives, that pushed the more India-friendly Solih government out, while a similar effect in Nepal wrought by coalitions collapsing, has brought the less India-friendly oil government in. With Bangladesh, the shock of Prime Minister Sheikh Hasina's dramatic departure and her arrival in India is all the more palpable, because of how heavily New Delhi invested in the Hasina government. It has now been left scrambling to reach out to her successors. If the last few years are a trend, then what are the lessons for India that can help insulate it from the splil-over effects of radical shifts in South Asia, and escape similar consequences for itself?

India stayed on one side of the fence

India stayed on one side of the fence
Perhaps the first big lesson is that the government
cannot be caught napping by events in its own
neighbourhood. India's presence in Bangladesh,
with four consulates in Chittagong, Rajshahi,
Khulna and Sylhet, apart from the High
Commission in Dhaka and a slew of agencies
working on various projects there, should have
ensured that the groundswell of anger against the
Hasina government was well documented and
relayed to Delhi — not just in the past few months,
but over the past few years. Despite obvious signs
that the Awami Leagueg overnment was
transforming into an authoritarian,
single-party-rule regime that jailed, raided or sent
most of its political opposition into exile, and that most of its political opposition into exile, and that various sections of civil society felt alienated and harassed, New Delhi did little to acknowledge the situation or reach out to the government with its

concerns in any perceptible way. In addition, the failure of India's diplomats to keep a close contact with the opposition, refusing permission to Bangladesh Nationalist Party (BNP) permission to Banguacesu reason even leaders to visit, and on one occasion even leaders to visit, and on one occasion even deporting a British lawyer for the BNP at the request of the Hasina government, underlined South Block's decision to be only on one side of the political fence. Many a time, such one-sided engagement is demanded by history. While the BNP's term in office under Khaleda Zia was a period of where India Bangladesh tensions were grave, especially over the issue of terrorism and border killings. India cannot choose to ignore the main opposition party in the neighbourhood (the BNP) for a sustained period of time.

India's decision to strengthen ties with the Taliban, despite its leaders' involvement in deadly attacks on Indian missions in Afghanistan,

Suhasini Haidar

or the warm welcome to leaders of Sri Lanka's Janatha Vimukthi Peramuna (JVP), a party that has often espoused an anti-Indian stance, and having to deal with Communist Party of Nepal led by K.P. Sharma Oli, despite his constitutional move on maps that India had raised strong objections to, point to one thing, It indicates that, eventually, pragmatism dictates engagement with all stakeholders in neighbouring countries. In the Madkives, India's full support to then-President Ibrahim Mohamed (Bbu) Solih and the casting of Mohamed Muizzu as an anti-India leader came a cropper when electoral tides turned. Even though India had to swallow a bitter pill and withdraw its troops from the islands, India's External Affairs Minister S, Jaishankar sought close engagement with the Muizzu government during his visit this week. Such hard lessons can be avoided if New Delhi abjures its "muscular" outlook, and broadbases its neighbourhood engagements. Rather than the stability of the one-party rule, New Delhi must favour a plurality of political views – within and outside its borders.

Loss of reputation, communal lens
Conversely, another lesson, well learnt in the case of Bangladesh and Shekh Hasina, is that India must never forget its friends. After the fall of Kabul, New Delhi lost its reputation as a dependable partner when it refused visas to hundreds of Afghans fleeing the Taliban — many were senior defence and security officials in the previous Afghan establishment who had personally risked their lives to secure Indian diplomats. India's decision to slam the door on them has left a lingering bitter taste. Apart from the principle, it is necessary to take the pragmatic view.

In South Asia, leaders often lose power, only to return after some time. New Delhi has done we by allowing Sheikh Hasina to stay in India until she finds another safe destination, as to have turned its back on her would have been a betrayal. The future too must be calibrated carefully. Ms. Hasina's continued stay will carefully. Ms. Hasina's continued stay will complicate ties with the new government, especially if they ask for her extradition on charges, or the Awami League is perceived to be using India to regroup itself. The third lesson the government must learn, sooner rather than later, is that it is a mistake to

sooner rather than later, is that it is a mistake to reduce ties in the neighbourhood to communal binaries. South Asia is a region of religious majorities, with Hindus, Muslims and Buddhists forming overwhelming parts of the population in different countries. The assumption that good ties are somehow linked to religion in any way, is faulty. Hindu-majority Nepal has been one of India's most difficult relationships, while Buddhist-majority Bhutan and Muslim-majority Maldives have often been its best allies. The government's move on the Citizenship

(Amendment) Act, to fast-track citizenship only for non-Muslims from Muslim-majority countries (Afghanistan, Pakistan, Bangladesh) has backfired badly across the neighbourhood – not just in the countries it mentions, but others who see it as countries it mentions, but others who see it as India's overeach. The Mod government's concern for minorities in Bangladesh in the wake of Ms. Hasina's removal is well placed, but must be expressed more discreetly, and not through blunt instruments such as India's Ministry of Home Affairs' five-man committee. India's concerns may be taken more seriously if the government also shows, by its actions not words, that it is committee that its committee that its committee that its borders as well.

its borders as well.

Erosion of pan-South Asian mechanisms
Lesson number four is that India must regain its
place as the pre-eminent power in the
subcontinent – not one that can be buffered by
one global power or another. While China's
inroads in the region are necessary to counter,
the region must not become a playground for
United States-China rivalries, where neither
shows a sensitivity to India's interests. China's
moves to marginalise India in trade, connectivity,
investment and strategic ties in South Asia is well
recorded. In Bangladesh, the U.S. campaign
against sheikh Hasina crushed India's concerns
underfoot. Washington's increasingly harsh
statements on the Hasina government, its
decision to impose a special "visa policy" to
secure democracy in Bangladesh was hypocritical
when judged against its lack of comment on
Pakistan's elections.
India must instead revive pan-South Asian
mechanisms such as the South Asian Association
for Regional Cooperation (SAARC), and find ways
to engage with the neighbourhood without
external interference. Bilateral issues with
Pakistan have led to a boycott of SAARC for a
decade now. New Delhi must also consider
whether it would abandon the other mechanism,

decade now. New Delhi must also consider whether it would abandon the other mechanism, the Bay of Bengal Initiative for Multi-Sectoral Technical and Economic Cooperation, or BIMSTEC, if ties with Bangladesh worsen, in the manner it has abandoned SAARC, and where that

Finally, not just New Delhi but all South Asian Finally, not just New Delhi but all South Asian capitals must focus on certain common lessons from the last few years of turmoil and election results. Joblessness and uncequal growth are fuelling anger on the streets and must be addressed. However, no amount of economic progress can cover up for democratic backsliding. In modern democracies, the stifling of dissent is unsustainable in the long run. The old dictum that if you want to 'raise crop for one year, plant corn...If you want to plant a crop for eternities, raise democracies' holds true for India and its ties in the neighbourhood.

Hints of the corporatisation of science research in India

uring the inaugural address of the 107th Science Congress in Bengaluru in January 2007. Prime Minister Narendra Modi reflected on the government's take on how science should be conducted in India. It was conveyed to young researchers in his usual aphoristic manner of speaking: "innovate, patent, produce, prosper". By expressing it in a maxim, the Prime Minister was hinting at the birthing of a new policy on knowledge production under his leadership.

Over several years, the current ruling regime has been directing laboratories and other research centres to earn their revenue from external sources by marketing their expertise and investing the surplus to develop technologies for national missions. This policy position can be traced to the 'Debradum Declaration' prepared by the directors of the Council of Scientific and Industrial Research labs in 2015, where it was decided to market patents as a means to self-finance research. In other words, this was a call for the corporatisation of science research — a process of converting any state-owned entity into a market commodity and being able to follow the business model to support itself, rather than relying on public support. Science institutes are now encouraged to develop research centres registered as Section 8 companies, wherein private companies or shareholders can invest money.

The ANRF and research

This line of thinking can be seen in the formulation of the Anusandhan National Research Foundation (ANRF). Established under Research Foundation (ANRF). Established under the ANRF Act of 2023, this new mechanism is designed to fund research in the country and to improve linkages between research and development, cademia and industry. The Finance Minister echoed the same in her July 23, 2024 Budges speech: "We will operationalise the ANRF for basic research and prototype development." The "prototype development" is a significant part of the innovation cycle to assess the marketability of a product – yet another hint of the government's overriding interest in funding the research that will cater to the market.

India must learn lessons from the changes in most of its neighbourhood

In establishing the Anusandhan

National Research Foundation and the way its funding proportion is designed, there are clear signals government's

an Adjunct Professor at the National Institute of Advanced Studies, Bengaluru

Another giveaway is the way funding proportion is designed. The ANRF will receive \$50,000 crore over five years, 72% of which is expected to be from the private sector, Judging from the way the resources are currently scheduled for the ANRF, it is clear that the government intends to reduce its role in funding the research and expects private entrepreneurship to pitch in a big way. Even in the United States, where research and development has significantly outstripped government funding over the last decade, it is clustered mostly in IT and pharmaceuticals. The knowledge thus generated through research is considered a commodity to be marketed. The Internethment of market-oriented perspectives comes from two sources, as discussed by Prabir Purkayastha in his book, *Knowledge as Commons*. What makes science different from the Renaissance period and after that is that science and technology are now more closely integrated than ever, and scientific advances can now end up as marketable products more rapidly. This transformation has also led to intellectual property rights allowing universities to sell the patents to private corporations, even if the research is publicly funded. The adoption of neoliberal economic policies across the globe has also accelerated the greater involvement of the private sector in funding science.

Signals despite the stated objective signais despite the stated objective of the ANRF is to fund research in natural sciences, but in reality, there are sufficient hints that the government is planning to place the university research system subservient to what Ellen Meiksins Wood calls subservient to what Ellen Meiksins Wood calls "the dictates of the capitalist market". The curiosity-driven research in natural sciences involves understanding and predicting natural phenomena based on empirical evidence and expected to finance curiosity-driven science because it will not invest money unless the research finds some immediate application that maximises its profits. Interestingly, the same stringency in government funding is not shown while supporting the branches of the 'Indian Knowledge Systems', which are not part of

evidence-based science. Science is driven by the zeal to understand the world through scientific tools. This can be encouraged only by increasing the share of public funding. The research proposals in basic science need to be assessed based on the proposers' ability to acquire knowledge about a problem defined by conducting observations, experimentation and analyses. The application part of the result may not be apparent at all. A generally accepted working definition of basic scientific research reads: "the pursuit of knowledge to understand a natural process irrespective of the potential applications that might arise from such knowledge".

Country comparison

Although India is ranked among the top 10 by gross domestic product (GDP), the ratio of public funding for science research in India has been 0.6% to 0.7% of GDP for the last decade. A country such as South Korea, only a third the size of India and its population, spends about 2% to 3% of its GDP. While the private sector is encouraged to fund, the government must increase its basic science and non-profit research allocation. If that does not happen, the country will eventually witness the decline of curiosity-driven science in our universities, which will eventually witness the decline of curiosity-driven science in our universities, which could also undermine public trust in science when it gets dominantly mediated by private when it gets dominantly mediated by private interests. Equally important is to nurture an ambience of free enquiry and maintain the financial and administrative autonomy of the institutes. This should have been amplified in the ANRF Act itself. As Niraja Gopal Jayal writes in the India Forum, although the heavy hand of the educational bureaurcacy has always been hovering over public universities, constraining their autonomy, in recent times "the state intervention has become more manifestly political in a partisan way, and openly ideological within an ecosystem that attaches no value to academic freedom". It all boils down to a grand vision, but it does not evolve in a repressive society.

LETTERS TO THE EDITOR

Justifiable anger Medical student and lay public anger over the Bengal hospital rape and murder case is not surprising (August 13). In these days of equality and gender parity, such incidents will ruin India's reputation and standing. People from overseas looking at India as a possible option for medical tourism will be alarmed by

such incidents. The absence of CCTV coverage in sensitive areas, tout menace, and no screeni of outsiders entering at night are some of the glaring security issues that

are existent in most government college hospitals throughout the entire country. Care-givers deserve better.

...

Dr. Thomas Palocaren, Vellore, Tamil Nadu

It is a matter of grave concern that there is damage to the crest gate of (August 12). Crest gates are

important components of a

a prestigious large da

dam that ought to be monitored regularly for the safety of the dam. There are competent authorities who should monitor this.

Jiji Panicker K., Anjilimoodu, Chengannur, Kerala

66 Rights are equal for everyone. We are all one people with one right. Do not make any distinctions among us. Exercise patience, and later udge. If we fail, then

Draft Broadcasting Bill was a brazen attempt to curtail freedom of speech by Modi govt. Policy should not designed considering electoral reversals. Its withdrawal does not mean we should be complacent

There are times when being the Finance Minister, it doesn't give me motivation when I have to answer about why our taxes are like this? Wish I can bring it down to almost nil

NIRMALA SITHARAMAN

Step up R&D spending

espite being endowed with immense talent and human resources, India lags behind developed countries in pioneering innovations of global impact. Poor spending on research and development (R&D) has been the bane of Indian science. The highly bureaucratised and patronage-driven science administration is another limiting factor. As of 2021, India spent just 0.7% of its GDP on R&D, signifi-2021, India spent just 0.7% of its GDP on R&D, significantly below the global average of 1.8%. Developed countries such as the United States, Sweden and Switzerland spend about 2.9%, 3.2% and 3.4%, respectively. Israel spends 4.5% of its GDP on R&D, the highest in the world. This underinvestment means fewer grants, outdated equipment and limited resources for researchers. The recent announcement of the Rashtriya Vignan Payesker (PVP), replacing Sharti Swarun Rhat. searchers. The recent announcement of the Rashtriya Vigyan Puraskar (RVP), replacing Shanti Swarup Bhatnagar (SSB) awards, marks the implementation of a new framework for honouring scientists across various disciplines. However, the change also raises questions about the effectiveness of such recognition in addressing the fundamental challenges faced by the country's research community. Despite the government's efforts to boost scientific recognition, India's R&D landscape continues to face several hurdles. The most significant of them remains poor budgetary allocations and research infrastructure. As India aspires for a place on the global high table on scientific innovation, it becomes imperative for the government to acknowledge the ele-

ernment to acknowledge the elephant in the room and urgently address the issues that hinder the progress of the research ecosystem. The country needs to in-crease the R&D spending to 3% of the GDP to achieve the desired results in the long run.

India spent just 0.7% of its GDP on R&D, much below the global average

sired results in the long run.

The private sector too must pitch in and step up spending on innovation and R&D. On other key parameters like the number of PhDs produced annually or citations to papers in scientific literature, the country's performance has been far from inspiring. With a large youth population and a strong diaspora that is more affuent and accomplished, India has great potential to pioneer high-tech innovation. The overhaul of the science education and research system, elimination of bureaucracy, structural changes for better administration and creating a large number of centres of excellence around outstanding individuals would go a long way in harnessing the true potential. The Economic Survey 2023-24 too has underlined the need for better integration of higher education, industry and faster commercialisa-24 too has underlined the need for better integration of higher education, industry and faster commercialisation of technologies. Despite advancements, challenges in investment and research application persist. India continues to face a significant brain drain, with many top researchers and scientists leaving for better opportunities abroad. This exodus deprives India of its brightest minds, hindering the growth of a robust domestic research ecosystem. The lack of competitive salaries, limited research funding and inadequate infrastructure at home contribute to this scenario. Bureaucratic bottlenecks virtually strangulate innovation. cratic bottlenecks virtually strangulate innovation. Complex procurement procedures, delayed fund re-leases and excessive paperwork create significant hur-dles. Another area of concern is the total disconnect between academic curricula and the needs of the industry, resulting in a shortage of skilled researchers.

Twin problems of exam

GAURAV GOGOI

While conducting a public exam in India is an impossible task owing to its scale, cheating adds to the challenge

MUHAMMAD YUNUS

T MURALIDHARAN

ny nation will not collapse due to atomic bombs or the use of long-range missiles. It collapses when you lower the quality of education and allow cheating in the examinations by the students," said a wise man. The consequences of cheating in an exam are deep. The patient dies in the hands of such doctors. The buildings collapse in the hands of such accountants. Humanity dies in the hands of such doctors. The buildings collapse in the hands of such doctors. The buildings collapse in the hands of such doctors. The buildings collapse in the hands of such properties and hands of such accountants. Humanity dies in the hands of such Pielpious scholars. And justice is lost in the hands of such properties and anyone and everyone is accusing the National Testing Agency of incompetence. I want to show you a different picture because we have conducted large recruitment examinations.

Public Exam
Conducting a public exam in India is an impossible task. A few years ago, a periand-paper exam was conducted for the recruitment of 300 employees in Tamil Nadu. Over 2 lash candidates applied and LoS lash were shortlisted. Physical exams were conducted in 5 cities, 177 exam centres, 4,935 rooms with 5,000 invigilators. The exam was conducted in one session simultaneously, across all the locations. The paper was not leaked and there were zero reports of mass cheating. But when results came out, it was found that a few candidates cheated using high-tech electronics micro equipment imported from China. This equipment was not detectable with the surveillance set up at the exam centre. A coaching centre, in a far away State, charged hefty amounts for organising the cheating but to only a few who paid. The public outcry on discovering that a few candidates from a remote State had passed forced the exam to be scrapped but most of those genmote State had passed forced the exam to be scrapped but most of those genuinely selected were penalised and lo the job opportunity. This illustrates the twin problems of exam viz, scale and, more importantly, the strong propen-sity of everyone to cheat in India.

more importantly, the strong propensity of everyone to cheat in India.

Alpha, Beta Error
There are two types of errors in an exam assessment — Alpha and Beta. The Alpha error is about the wrong person getting through the assessment person feating through the assessment person faiting the assessment. For example, cancelling an exam after an unsubstantiated claim of leak or even limited fraud fixes the cheater but penalises the majority of genuine selected candidates. Even the Supreme Court tries to balance the two types of errors and the recent NEET decision of the Supreme Court to decare the results despite a few cases of fraud is the correct one—not to penalise the large majority of genuine exam takers because of a few fraudsters.

The complexity of conducting any public exam in India is stupendous. Let's start with a pen-and-paper exam. First, the questions have to be set, answer options are to be set, correct (and unique) answer key must be identified. Then the question papers may be translated into multiple languages, printed, scaled, transported to every part of the country, received and stored in a secure place till the exam adae. On the date of the exam, the question paper seal must be opened in each exam centre, sent to each room and distributed to students in thic. Unright to exam, students must be briefed.

Invigilators must be briefed. During the exam, students must be watched very closely. After the exam, paper and

answer sheets must be collected on time, accounted, sealed and sent to the control room of the exam centre. Then these documents are again transported to a common location under strict security, opened, scored, tabulated, verified and then the results are published. In the online exam model, most of the tasks are similar except for a few steps like printing the exam paper and the mode of conduct of examination.

It is important to note that typically there are thousands of people involved when you conduct a large exam and it takes between 90 to 180 days from the time the exam is announced and the results tabulated and declared. During this 6-month period, anyone of the 1,000-plus people involved can become a rogue participant and get sold out to a presistent organiser and the whole exercise is compromised.

It is also important to note that gaming is a big business because of the low odds of winning. There are experts working with coaching centres who use latest technology, spend time and money figuring out the weakest link in the system. It is a fact that gamers are always one step ahead of the testing agency. It is impossible to build a fool-

State boards, CBSE and ICSE are competing with each other to pass almost every student — in short, our school system assessment has failed proof system when the stakes are so high and the scale is so huge.

Schooling System
The root cause of the entrance test scam is our schooling system. If everyone passes class 10 and 12, what is the sanctity of the exam? Our school assessment system in class 10 and class 12 has completely failed and kicks up anyone with minimum capability. The numbers are huge at the class 12 level despite significant school dropouts in class 8 and 10. Let us look at some statistics on pass percentage.

despite significant school dropouts in class 8 and 10. Let us look at some statistics on pass percentage.

In the Bihar State Board, students need to score just 21 marks (30%) in theory and 12 (30%) marks in practical to be declared as passed. On average, approximately 80% of the total candidates pass the Bihar Board 12th exams every year. In 2024, in Tamil Nadu, the class 12 pass rate was 94.56%, in Telangana, it was a moderate 64.99% but in UP, it was 82% and in West Bengal, it was 90%. The ICSE results were even more amazing. In 2024, the ICSE or class 12 pass rate was 99.47% while CBSE class 12 students had an 88% pass rate. All State boards, CBSE and ICSE are competing with each other to pass rate was 94.7% while CBSE class II. In short, our school system assessment in class 10 and 12 has failed. Anyone who pats in minimal effort can pass. All these people end up in the entrance exam market for the college system. In short, our stille knowledge or capability but with a lot of aspirations. This has severe consequences.

Impossible Odds

Some 14 lakh students take JEE main for 57,000 joint counselling seats for ITI, NIT et can d2 3 lakh students take NEET for I lakh MBBS seats (4% win rate in both cases) 7,1000 register for CI.AT exams for 4,600 National Law School seats (6% win rate), 2.9 lakh take CAT for 5,500 IIM seats (1.9% win rate), When I look JEE in 1974, there were approximately 1 lakh exam takers for 1,500 seats (1.5% win rate). Clearly, the odds were against the youth for many years but the scale of exams has multiplied.

Aspiring Parent

Aspiring Parent
Every parent wants the best but fears
that his child will somehow end up a
pauper without any meaningful career.
While the children are in 2024, parents
still live in the last century and believe
that career options are limited to computer science and medicine This narrow focus of parents has made life very
difficult for their children. Parents
want their child to achieve what they
could not. So even though the child
barely passed class 12, the parents want
the child to sit for NEET and JEE or
equivalent ALEEE or NCLAT. This
happens every year, in every family,
with their teenage child.

Get tough

Though manual scavenging has been banned in India, this practic is still commonplace with people forced into it because of rigid forced into it because of rigid caste rules. Not only manual scavenging exploits the marginalised section of society, but it is also a health hazard for them. It is unfortunate that in 10 years, 453 sanitation workers have lost their fives while cleaning sewers and septic tanks. The manual scavenging Act should be implemented in letter and spirit. Also when imposing a blanket ban on manual scavenging, the government should simultaneously ensure adequate rehabilitation and employment opportunities for those currently engaged in such practices.

PVICTOR SELVARAL P

Speedy trial

The rape and murder of the resident doctor at Kolkata's RG
Kar Medical College & Hospital is a tragic reminder of the 2012
brutal Nirbhaya rape case. Details mentioned in the preliminary autopsy report will force us to hang our heads in shame.
It is a positive sign that Mamata Banerjee has given a deadline to her police, but what is baffling is the fact that the arrested person is a civic volunteer for state police. All such rape cases must be put under speedy trial by the judiciary. And this case also highlights one critical point that on-call resident doctors don't even have a restroom in most hospitals. The medical system treats them as the lowest-class clitzens. The lack of a restroom was the reason she went to the seminar hall to take a quick rest where there were no CCTVs. They deserve better facilities at all the hospitals across the country. Also, doctors who are on strike, though their anger is justified, they should join back their duties as patients should not suffer.

BALGOVIND, heat

It's time to find out whether a conflict of interest happened. If it happened, who will protect investors' rights? These must be addressed by the government and a free and fair inquiry into SEBI activities must be done at the earliest. Such allegations are not good for the Indian stock markets.

A SHYAM KUMAR, Hommokind.

Cause for concern

Cause for concern

The gruesome rape and murder of a trainee doctor on the premises of a reputed government medical college of West Bengal has sent shock waves across the nation. The incident has once again raised several questions regarding the safety of women in their respective workplaces. Even though the Sexual Harassment of Women At. Workplace Act has been in existence since 2013, there is not much relief. The data released by the National Crime Records Bureau is staggering. According to it, the victim count for workplace sexual harassment against women was 422 in 2022. This is a cause for concern because it is well established that women actually underreport crimes against them due to fear of respectussions, inadequate awareness and societal blases. Atrocities against women in the places of work result in the violation of basic fundamental rights of women, especially the right to equality under Articles 14 and 15, and the right to fire and to live with dignity under Article 21 of the Constitution. Therefore, the institutions must follow every norm and guideline mandated by the government to secure a healthy environment for women at work. A breach of these norms must be dealt with an iron hand.

Indian tycoon now BT's largest shareholder

It is in telecoms where Sunil Bharti Mittal made his fortune as India's demand for data has boomed. Bharti Airtel counted 400 million Indian customers last year, 150 million in Africa, plus another 60 million in Bangladesh and Sri Lanka. Bharti will become the largest shareholder in BT Group.

Farm boy who picked up a spear

In a country with 1.4 billion people, there is nobody quite like Neeraj Chopra. He is the farm boy who became a national hero by picking up a sport that no one else took seriously. He is the strapping Olympian. And he is the man who secured a breakthrough gold for India by launching a javelin the length of a football field.

How Russia lured Indians to fight

Ravi Moun was excited to travel to Russia from his small village in Haryana in early January. The 21-year-old dropped out of school after 10th grade and was-looking for work when he was contacted by a local agent with the promise of a lucrative job in transportation in Moscow, according to his brother Ajay.

INDIAN EXPRESS IS NOT AN INDUSTRY, IT IS A MISSION

- Ramnath Goenka

WITHDRAWN BROADCAST BILL OPENS DOORS FOR A MORE LIBERAL VERSION

HE information and broadcasting ministry has rightly withdrawn the Broadcasting Services (Regulation) Bill sensing dissonance on it. The ministry has said on X that it is working on a new draft and has invited stakeholders to give their opinions by October 15. Perhaps the government is aware that with a reduced majority, it would not be smooth sailing for a contentious bill that is seen not to be in consonance with Article 19(1)(a) of the Constitution that enshrines the fundamental right to freedom of speech and expression. Based on the feedback received, the definition of a digital news broadcaster 'was seen to be too broad. The bill brought in its ambit all manners of content creators including digital influencers, and posts on the likes of Linkedin, YouTube and X. What is particularly alarming is that with each round of revision in media regulations, the noose has gotten tighter. The broadcasting industry has been regulated for long by the omnibus Cable Television Networks (Regulation) Act, 1995. It is outdated today as its processes pivot on last-mile cable ment is aware that with a reduced majority, it would not be

minibus Cable Television Networks (Regulation) Act, 1995. It is outdated today as its processes pivot on last-mile cable delivery, while a slew of other digital platforms have sprung up over the past two decades. The ministry initially circulated a Broadcasting Regulation Bill last November, which brought streaming services into its scope. It also sought to introduce a content evaluation committee comprising government and non-industry members to work like a censor. Along with the bill came a slew of other media regulations in 2023—the Digital Personal Data Protection Act, Press and Rejistration of Periodicals Act and IT Rules—adding to the woes of an over-regulated industry. The revised broadcast bill of 2024 has gone a step further by including "intermediaries" such as internet service providers, social media platforms and search engines in its regulatory sphere. The right to freedom of speech and expression is not absolute, Article 19(2) allows for "reasonable restrictions" to protect, among other things, the sovereignty of the nation, and norms of decency and morality. On the other hand, if news flow is throttled and all forms of content are vetlending. hand, if news flow is throttled and all forms of content are vet the base of the second of the fundamental right to tree speech will be extinguished. One can only hope that the revision process of the new broadcast bill will help broaden free speech and not impose new restrictions on it.

MAJHI GOVT NEEDS PLAN TO TACKLE HOT POTATO

OR the Mohan Majhi government in Odisha, the humble potato has proved too hot to handle—quite literally. The kitchen essential has not climbed down from the ₹50-akg mark it touched in the state's retail markets a month ago. Odisha banks on West Bengal for potato supply. Af-ter the neighbouring state banned movement of the tuber to control local prices in mid-July stocks dipped and prices rose ter the neighbouring state banned movement of the tuber to control local prices in mid-July, stocks dipped and prices rose across the border. The inflation has not just messed with the food budgets of middleclass and poor households in the state, but has also left the BJP government in a state of discomfort. Tough falks by the food supplies and consumer welfare min-ister, visit to mandis, and articulation of ambitious plans to procure stocks from Uttar Pradesh and Punjab have not worked. Majhi took up the matter with his counterpart Mamata Banerjee during the NTIT Aayog meet late last month; that he had to dial Didi again on Sunday seeking her intervention in the matter reveals how delicate the issue is. Sustained price rises have a history of shaking up govern-ments. At the moment, it's just not potato, but other essen-tials like vegetables are also too costly to be ignored. It means the Majhi government has a crisis on its frying pan. Its decision to buy 300 tonnes from UP through the Na-tional Agricultural Cooperative Marketing Federation, to be sold at 330 at some urban stations, can only be a short-term measure with limited impact. Instead, the government can tap into the price stabilisation fund to procure stocks from major supplying states. It would also require the government to take traders on board for retail distribution that would calm the prices. A more vigilant enforcement against hoarding is need-ed, too. This crisis is a baggage from the BJD regime, but blam-ing the regional party will not helo. Odisha produces about 3

ed, too. This crisis is a baggage from the BJD regime, but blam ing the regional party will not help. Odisha produces about 3 lakh tonnes of potato against its annual demand of 13 lakh tonnes, whereas West Bengal, India's second largest producer, grows a whopping 12.6 million tonnes. To absorb such shocks in the future, Odisha must ramp up production, invest heavily in cold storages and incentivise the crop's producers. The cash crop will lure farmers if the storage capacity is improved and decentralised. For that, a determined approach will be needed. Mere optics management will not make a lasting cut.

QUICK TAKE

SECURING FUTURE ELECTIONS

EFORE he could interview Donald Trump on X this Monday. Elon Musk's platform was swamped by a denial-of-service attack. The same day, the FBI confirmed it had launched an investigation into an alleged hack of the Trump campaign. Another report claimed the US agency was also investigating spear-phishing attempts targeting the Biden-Harris campaign. With its mostly offline machinery, the Indian voting system is safe from similar attacks to an extent But generative AI has made manipulation of voting intent easier; there is also the worry of chaos created by fake re-sults. As soon as it's constituted, the new parliamentary com-mittee on communications and IT should focus on securing future elections in India.

nower, infinity ways, sugast fractices becomber as the nation's month for introspection, with the latter marked as the saddest on Pakistan's political calendar for suffering the greatest sethack that can befall a nation—its break-up—in December 1971. December also stands out because it ani-December also stands out because it animates the national security challenge that Pukistan confronts. It was on December 27, 2007 that Benazir Bustio was assassinated. On December 16, 2014, Pukistan witnessed its most borrific terrorist attack on a school in Peshawar. These ghosts remain largely unburied, as is evidenced by the daily threat posed by the Tehrik-1-Tallban Pakistan (TTP) and the persisting ambiguity surrounding the interface between Pakistan's state agencies and terrorist outfits. Nevertheless, August has a special

state agencies and terrorist outifis.

Nevertheless, August has a special
quality in Pakistan, just as it does in India, and therefore invokes a special kind
of analysis.

The past 3-4 years have been exceptionally stressful for our neighbour: Major
natural disasters, pronounced economic
distress amid a near insolvency and debt
default scenario, a national socurity crisis with mounting terrorist attacks and
growing political protests in the insurgency-prone region of Baluchistan and
the tribal areas—all these have regularly
thit the headlines for the past few years.

This internal turmoil is matched by a
nightmarish external environment with

This internal turmoil is matched by a nightnarish external environment with a marked deterioration in many principal relationships. Bad India-Pakistan relations are hardly new. But the long slump since 2016 and the further dipsince 2019 mean that the relationship is in its longest ever downturn in its current phase—even including those associated with the 1965 and 1971 wars.

With Afrahamistan the triumphalism that

ated with the 1965 and 1971 wars.
With Afghanistan, the triumphalism that
originally accompanied the Taliban victory
in August 2021 has dissipated quickly into
the new reality of a broken relationship
with the Taliban regime in Kabul and a resurgent TTP a home. With Iran, its many
subterranean differences flared into an
open conflict in January this year with
drone and missile attacks in both directions: the divisions have been parepered over tions: the divisions have been papered over, but the gulf remains—reflecting the sub-optimal nature of Iran-Pakistan relations. Relations with the US, too, have been

On its 77th birthday, Pakistan is facing a polycrisis that can be traced to its civil-military dissonance, foreign policy misadventures and geopolitical approaches. Can it emerge from the morass?

THE OTHER CHILD OF MIDNIGHT STRIVES TO GROW

stagnating at a low plateau since at least 2016. Other old and reliable partners such as Saudi Arabia and the Gulf sheikhdoms have rebalanced their position with respect to India-Pakistan issues and moved to more equidistant postures, which Pakistan views as a negative development. In all this, China remains a stable ally and invaluable external partner. Yet, for a country like Pakistan, on the whole this is a somewhat gloomy external situation. This combination of external and internal negativities is summarised as Pakistan's polyrisis. It's not as if any situation the nation confronts today is novel. What is unusual about the present conjuncture

is unusual about the present conjuncture is how the different crisis elements—polit ical, economic, security-related and exter

If this sense of crisis preoccupies many Pakistanis, much of the day-to-day discussion in the country gets focused on what has been a central feature for virtually its entire lifespan—the civil-military relations. What currently illustrates and animates the civil-military dissonance is that former Prime Minister Imran Khan is in jail—he completed a year behind bars earlier this August. That this has of ten been a full term in office for elected governments underlines the point that the Pakistan military has a propensity to meddle in the political process, and thereby imparts to it a fundamental fragility. This month's events in Bangladesh have

This month's events in Bangladesh have onverged with introspection about Paki-an's crisis-prone underperformance indrome. In the past few years, there has

been much angst about Pakistan's trajec

been much anges acous ransstans is rategetory, since comparisons with Bangladesh
showed how glaring the contrasts had become. The juxtaposition is in many ways
natural, given that the two were part of
the same country till half a century ago.

In 1971, East Pakistan's population was
larger than the western wings. This demographic difference lay at the root of the political polarisation that ultimately broke up
the country. Bangladesh has since successfully curbed its population growth, while
Pakistan has not—it still has one of the highest population growth rates in the world. On
a range of other economic and social indicators including per capita income, Bangladesh has outperformed Pakistan—for instance, its garments exports alone are
greater than Pakistan's total exports.

So what explains Pakistan's predicaments? Some argue that at their root are
questions of identity and how a state
founded on the basis of religious denomination is insufficiently equipped to manago a range of challenges and diversities
that Pakistan has been presented with
before and after 1971.

In other perspectives, Pakistan's present
and future developments are compromised
by its geopolitical ambitions and insecurities. Its revisionist postures on Kashmir
predisposes Pakistan to a conflict-prone
and suboptimal relationship with India to
its east. Given the difference in size and
other asymmatries, this more or less conderma Pakistan to living in a state of insecurity visa-vis India. The pursuit of equally flawed policies of strategic depth
visa-avis Alghanistan creates permanent
insecurities and conflict on its western
borders. In brief, Pakistan's structural
problems can be traced back to its foreign
policy and geopolitical amplition of its military,
which has been a characteristic feature of
Pakistan to reposition about 18th-century
Germany—"where some states have an
army, the Prussian Army has a state"—
could also have been written for modernrudy Pakistan. The Pakistan Army has inparted to governme

THE INDIGNITY OF QUESTIONING FEMALE ATHLETES' FEMININITY

T the Paris Olympics, boxers Im-ane Khelif of Algeria and Lin ane Khelif of Algoria and Lin Yu-ting of Taivan were subject to questions about their sex identify. Speculative accusations were made against these female affiletes with interest traits of being male and transgender. What's galling is people in powerful positions have often spread such misinfermation and disrupted the lives of many female athlete with interest traits, ended her life in October 2001 after being questioned to prove her biological sex identity through a so-called 'sex determination test'.

This started in the 1940s. For a long time, female athletes with genetic different processing the started in the genetic different processing the started in the great of the processing the started in the great of the great of the started in the great of the great

time, female athletes with genetic differ-ences were targeted with 'sex verification tests'. There is limited data available on

onces were targeted with 'sec verification tests'. There is limited data available on male athletes chromosomal or hormonal profiles. However, a study conducted on over 600 elie athletes in 2014 revealed that 16.5 percent of fraile athletes had low testosterone levels, while 18.7 percent of fe-male athletes exhibited high testosterone levels, it is estimated that nearly? a percent of male competitors had testosterone levels within the typical formale range.

But it's female athletes with intersex traits who are often misbranded as transsender. For instance, G Nagalashmi, a former national-level competitor with intersex traits who are often misbranded as transsender. For instance, G Nagalashmi, a former national-level competitor with intersex traits, was selected for a post in the Tamil Nadu police. However, the state police disputed her sex identity, which was ignorantly missepresented as transsexual by the media, medical practitioners and the judiciary. There are over 20 south Indian female athletes with intersex traits who lost track of their lives and careres because of misinformation and ignorance.

It's pertinent to understand that sex and gender identity is related to a person. Being intersex is a sex characteristic, and not to do with gender. Intersex people are born with sexual anatomy that does not fit the typical definitions of female or male. There are over 40 intersex variations,

the typical definitions of remaine or maise. There are over 40 intersex variations. The governments of India and many other nations still lack data on intersex populations. In India, they are not counted separately in the census. One major reason is most governments do not even recognise intersex as a separate sex identity. On a re-cent petition in the Supreme Court,

Gopi Shankar M vs Union of India, a three-judge bench led by the Chief Justice sought responses from eight Union ministries on making provisions for recording births and deaths of intersex people, and including them in the consus. After a prolonged delay, the case has been listed for September 2. There are more than 30 elite athletes, including Michael Phelps, Usain Bolt and Rafael Nadal, who have exentic differ-

Rafael Nadal, who have genetic differ-ences. While their natural physical ad-

Usain Bolt and Rafael Nadal display atypical sex characteristics. But it's only female athletes with intersex traits like Imane Khelif who are penalised. Many like Santhi Soundarajan were driven to despair by such malicious misinformation

vantages are celebrated, female athlete

vantages are celebrated, female athletes with similar differences are puinsherd. In 2006, Santhi Soundarajan, a romarkable athlete, was compelled to undergo a sex verification test after winning a silver med-al for India at the Asian Games in Doha. In led her to despair and attempt suicide. She later said, "Don't do this to female athletes... My life is completely shattered because of wrong judgements of Indian and international sports bodies. Your decision doesn't just affect us on the track but also derails everything in the world outside of it." In 2014, indian sprinter Dutee Chandwas barred from competing in the Commonwealth Games on questions on her sex identity. The Indian government spormaorred her case to challenge the hyperan-

drogenism regulations at the Court of Arbitration for Sport (CAS). In a historic vertict, CAS suspended the International Association of Athletics Federations by perandrogenism gender test rules for two years and termed it "unscientific". Due to this, the 2016 Rio Olympics was conducted without sex verification tests. Even the UN Human Rights Council advanted a secolution to propose the prinche

Advisor, Juvenile Justice Committee, Madras High Court and on founder Internet Aria Talanto

without sex verification tests. Even the UN Human Rights Council adopted a resolution to protect the rights of interest people when 24 countries voted in favour and 28 abstained; none voted against the resolution. The UNINEC said in a fact sheet that 1.7 percent of the world's population is interesx.

The need of the hour is to put on a decolonising lons and erase the prejudicial differences among the diverse sex and gender identities, and adopt from Indic values that fostered an inclusive environment for people of diverse characteristics.

Female athletes with intersex traits are estracised in society Grave human rights violation, not-acceptance and non-vecognition often compel such athletes to end their lives; many other voices remain unheard. Intersex variations can be picked up at any time. They are not always obvious from

lives: many other voices remain unheard. Intersex variations can be picked up at any time. They are not always obvious from birth. There is no one intersex experience. Some females with intersex traits can reproduce. It is the genetic factor and determination of female athletes with intersex traits that play a vidar love in establishing their sex identity. National and international sports bodies need to understand the science behind it. Female athletes with intersex traits cannot be put into a third classification in sports, as it would increase the chances of leaving athletes with disorders of sexual development.

This debate seems never ending. The best way forward is to remove the physiological differences between the sexes. Athletes with intersex traits born and raised as female cannot be compelled to compete in a separate category. The government and sports bodies must sensitise the masses and tailor their regulations to protect them. (With inputs from Vijey Mishra, human rights lower specialising in human rights lower specialising in international SOGIESC lows) (Views are personal)

Influencing wellness

MAILBAG

Ref: Sports must not provide space to market maladies (Aug 13). Cinema heroes, cricketers and other sports celebrities are great influences in society. It is natural that marketers are eager to exploit their fame. The author aptly exhorted celebrities to act as catalysts for the wellness of the country. R Sridharan, Chennai

Sports superpower

Sports superpower

Ret: Olympic let-down: Must wir more
medals before hosting games (Aug 13). I tuly
endorse the editional's views. A country with a
population like ours should have been able to
produce quite a few Olympians over the years.
The sorry state of our medal count should be
a rey-oppen for taking up the challenge
hand-on, so that the dream of becoming a
sports superpower would not remain a remote
one for Iodia.

Thomas K leepons Chizakhoghue.

Thomas K Jerome, Chirakkadayu

Before 2036

The editorial rightly pointed out what went wrong in our bid to win more medals. The toppers alone get more attention while the juniors are neglected. All sports should be patronised from grassroots levels, not just crickes. Only then can we dream of hoisting the Olympic flag in 2036. Rajakumar Arulanandham, Palayamkottai

NEET confidence

Ret: Justice on NEET brings cheers & policy boost (Aug 13). The NEET issue was keenly observed and followed by many students, parents and politicians. Much to people's relief, the Supreme Court systematically dealt with the allegations, rendering 'responsible justice' to the stakeholders. The testing agency has to be extra careful to maintain the confidence of students. idencë of studer e**ma, Thanjavu**r

Hospital skeletons

Ref: Didi buys time on doc rape-murder probe ker: Into Days time on dot rape-minuter prope (Aug 13). It is puzzling why West Bengal CM Mamata Banerjee, who had consented to a CBI probe, is going slow on it now. She may be afraid some other incidents would come to light as R 6 Kar Medical College was notorious for nagging and other student-related

misdemeanours. S Lakshmi, Hyderabad

Hasina consolation

Ref. Hazina's stay in India won't hort ties, says B'desh gort (Aug 13). The Bangladesh foreign secretary's affirmation on this issue is a consolation for both countries. It is surely good news for former Bangladesh PM Sheikh Hazinar et al.

Hasina as well.

Find out powerful possibilities of Sports B H A R A T A M

THE curtains have drawn to a close. The show of Olympics 2024 is over. The flag bearers of the participant countries had displayed their skills, talent and valour. There were moments of joy, despair and estasy. 'Khel Khatam Hua.'

opy, osepar and cestasy. Such Khatam Huai.

For those who could not shine as expected it is better luck next time. Some countries were on top some like India were in the bottom half. Compared to 2020-2021 Tokyo Olympics where India had won seven medals includ-ing gold, this time it was a set-back. It also witnessed a sad story of disgualification of Vinesh Pho-gat just because she was over-weight by 100 gms. It is time for the athletes, the Sports Authority of India and

introspection about the overall performance and make a genuine assessment where India slipped, what were the real reasons and come up with an action plan about what needs to be done so that India could be in the top half in the next Olympics. The first and foremost thing is keep politicians and political parties out of this introspection. They only know how to make noise and use it for narrow political purpose till they get some other issue. What is required is that one What is required is that one

some other issue.

What is required is that one needs to make a clear evaluation of the circumstances under which the athletes competed, the kind of

ity of training that was given to them keeping the standards adopted in other top countries in mind, assess the performance of athletes and trainers and come up with a real ground report on the shortcomings so that India can reflect sporting superiority on the global stage.

can reflect sporting superiority on the global stage. Both the sportspersons, the academies, the trainers, the In-dian Olympic Association, the Sports Authority of India, Nationdian Olympic Association, the Sports Authority of India, Nation-al sports federations should keep one thing in mind. India wants to bid for 2036 Olympics. Hence it should go into fast track and mission mode and gear up for a superb performance and prove its superiority. No excuses will help and it would affect the prestige of the country if we do not succeed

in bagging several gold, silver and bronze medals.

There would be no point in the political parties blaming each other if we are still in the bottom half position in 2028 or 2036. The other if we are still in the bottom half position in 2028 or 2036. The political parties and their leaders whether it be the leader of opposi-tion in Lok Sabha or the leaders of bloc INDIA or the BJP should take bloc NDIA or the BIP should take necessary decisions to see that the teams start gearing up for the 2036 Olympics and see that the Trianga files higher and higher. No amount of sloganeering will help. Only focused and dedicated efforts to train our sportspersons who certainly are second to none should be made. There should be no place for caste or other considerations. There should be modearth of funds to train them and

equip them with necessary skills as per standards prevailing in Japan, China or other top countries. The Sports authority of India claimed that they had spent about Rs 470 crore on this Olympics. The question is what was the percentage of this money spent on training. How rigorous was it? How scientific was is it? Where do we stand in terms of facilities compared to

entific was is it? Where do we stand in terms of facilities compared to Japan or China. What helped our athletes to perform much better in 2020 Tokyo Olympics and why we slipped this time?

The Tiranga in the hands of Har Khiladi would fly high only if a concerted effort to bring a turnaround in the field of sports is made from now itself. India should rock in 2028 Los Angeles and should be on top by 2036.

NASA JUST SHUT DOWN A PLANETARY **DEFENCE MISSION, NOW WHAT?**

AUNCHED in 2011, NASA'S NEOWISE mission operated in Earth's orbit until late last week. It detected more than 3,000 near-Earth objects or NEOs – asteroids or comets whose orbits can bring them close to Earth, even with the possibility of a collision. NEOWISE was shut down on August 8.

Surveying the popula-tion of NEOs is central to the emerging concept of planetary defence. That is, understanding and mitigat-ing the risk of collision from ing the risk of collision from asteroids large enough to do significant damage to Earth. NEOWISE has made fundamental contributions to establishing the knowledge base for planetary defence, with more than 200 of the 3,000 objects it studied not known to us previously. Now at mission end, and commanded by NASA to shut itself down, NEOWISE will re-enter Earth's atmosphere before the end of this year. Where does that leave us with defending our planet? nough to detect asteroids

From astrophysics to planetary defence NEOW-

squeezing extra life out of missions that reach completion. In this case, NEOWISE represented an entire second life, in an entirely different area of research. How will we defend Earth now? As well as the discovery and study of thousands of NEOs, NEOWISE established the foundation of knowledge that has informed a new, dedicated planetary defence mission.

ISE started life as a different mission, simply called WISE (Wide-field Infrared Survey appiorer). It was designed to study the infrared radiation from distant galaxies in the universe. Infrared means "beyond red" – infrared light sits just past the red end of the spectrum of colours humans can see. We know infrared radiation better as the heat from the Sun, for example, or from a radiator keeping us warm in winter. When the coolant on the WISE mission ran out and these sensitive observations of galaxies couldn't be carried out any more, NASA granted a mission extension under the NEOWISE name. They realised the telescope system was still sensitive enough to detect asteroids

thereby having a very strong infrared signal. NASA has an extraordinary history of sequezing extra life out of missions that reach completion. In this case, NEOWISE represented an entire second life, in an entirely different area of research. How will we defend Earth now? As well as the discovery and study of thousands of NEOs. NEOWISE established the foundation of knowledge that has informed a new, dedicated planetary defence mission.

mission.

NASAS NEO Surveyor
will be launched in 2027.
NEO Surveyor's goal is to
discover approximately two
thirds of all NEOs larger
than 140 metres in diam-eter, over a five year baseline survey. This is a big step
toward fulfailing the mantoward fulfilling the man-date United States Congress

has provided to NASA: to discover 90 per cent of all NEOs in this size range. If they hit Earth, asteroids of this size could cause mass casualties if the impact were casualties if the impact were over a large metropolitan region. You might think this poses a bit of a risk-shutting down NEOWISE three years before launching NEO Surveyor. What happens if one of these big asteroids comes our way in the next few years? The risks are very small, as estimates show asteroids 140 metres in diameter impact Earth only approximately every 20,000 years. So, we would have to be extremely unhuky to have one in any given threeto be extremely unlucky to have one in any given three-year period, especially im-pacting a place that would cause a large amount of damage. Only around 3 per cent of Earth's surface is oc-

pied by urban areas. NASA doesn't really have much of a choice with the end of NEOWISE. The Suns 11-year activity cycle is picking up and causing Earth's upper atmosphere, the ionosphere, to thicken. NEOWISE is flying through NEOWISE is flying through this ionosphere and can't raise its orbit, so the iono-sphere is inevitably dragging NEOWISE back to Earth. NEO Surveyor started con-struction in 2023, so a 2027 launch is pretty impressively rapid, which is minimising the gap between NEOWISE and NEO Surveyor. NEOWISE is scheduled to enter Earth's atmosphere before the end of the year.

NEOWISE is scheduled to enter Earth's atmosphere before the end of the year, but we don't know precisely when. Weighing almost 700kg, some of NEOWISE itself is likely to impact the surface of Earth. Hopefully

it stays away from populated areas in the process – some recent re-entry events have resulted in space debris falling reasonably dose to populated areas. An asteroid is coming! What next? Knowing about an asteroid on a collision course with Earth is one thing. Doing something about it is another thing altogether.

Huge steps toward planetary defence occurred two years ago, when the DART mission flew to an asteroid, impacted it, and changed its and changed it

impacted it, and changed its trajectory. This demonstrattrajectory. This demonstrated it's possible to change the course of asteroids, which could be used in the future to protect Earth from a collision. Predicting potential Earth impacts as far as possible in advance, years preferably, gives the DART-style technology approach a chance. The piomeering work of NEOWISE, and the upcoming comprehensive work of NEOWISE, and the upcoming comprehensive observations of NEO Sur-veyor, will place an enor-mous amount of informa-tion in our scientific bank, which will never go out of date and will be the basis for planetary defence for per-haps hundreds of years into the future.

Use of smartphones in schools

1 in 4 countries have banned use due to negative impacts: UN report

ARGE-scale internasuggests a negative link be-tween excessive use of tech-nology and student perfor-mance, yet less than one in four countries have banness four countries have banness smartphone use in schools, according to the Global Ed-ucation Monitoring (GEM) report. The report on Technology in education published by the United Nations Educational, Scien-tific and Cultural Organiza-tion (UNESCO) has flagged that assessment data has tion (UNESCO) has magged that assessment data has found that mere proximity to a mobile device distracts students and has a negative

impact on learning.

An expert from the UN's
Education team told PTI
that too much attention
on technology in education usually comes at a high cost, and technology, high cost, and technology, including smartphones; should only be used in class when it supports learning outcomes. "The adoption of digital technology has resulted in many changes in education and learning. The set of basic skills that young people are expected to learn in school, at least in richer countries, has expanded to include a broad range of new ones to navirange of new ones to navi-gate the digital world. In

many classrooms, paper has been replaced by screens, and pens by keyboards. COVID-19 can be seen as a natural experiment where learning switched to online for entire education systems virtually overnight, the re-port said. "Large-scale interna-

and comets that come close to Earth and the Sun,

Transporting the first and the ative impact on learning in 14 countries, yet less than one in four have banned smartphone use in schools."

UNESCO has flagged that use of devices by students beyond a moderate threshold may have a negative impact on academic performance as the use of smartphones and computers disrupts classroom and home learning activity. "A meta-analysis of research on the relationship between student mobile-phone use and educational outcomes covering students from pre-primary to higher education in 14 countries found a small negative effect, which UNESCO has flagged small negative effect, which

(

was larger at the university level. The decline is mostly linked to increased distrac-tion and time spent on non-academic activities during learning hours," the report said. "Incoming notifica-tions or the mere proximity of a mobile device can be a distraction, resulting in stu-dents losing their attention dents losing their attention from the task at hand. The

from the task at hand. The use of smartphones in classrooms leads to students engaging in non-school-related activities, which affects recall and comprehension,
it said.

The report also mentioned that a study found
that it can take students up to 20 minutes to refocus
on what they were learning after engaging in a
non-academic activity. By
categoristing use of technology at home and in school
as low, medium or high,

more intensive use beyond a threshold was most of-ten found to be correlated with diminishing academic performance while moder-ate usage was most often associated with positive academic outcomes. "Stud-ies on teacher percentiles ies on teacher perceptions of the use of tablets and ies on teacher perceptions of the use of tablets and phones highlight difficulties in classroom management, when students visit websites other than those indicated by teachers or due to the increased level of noise in the classroom. The use of social media in the classroom is also disruptive, increasing academic distraction with negative effects on learning outcomes," the report said.

Data analysis also showed a negative correlation between the use of social media in school and digital reading performance. Resources spent on

technology, rather than on classrooms, teachers and textbooks for all children in low and lower-middle-income countries lacking access to these resources, are likely to lead to the world being further away from achieving the global education goal, it said. The report has called for clear objectives and principles needed to ensure that technology use is of benefit and avoids harm. "The negative and harmful aspects of the use of digital technology in education and society includer risk of distraction and lack of human contact. Unregulated technology even poses threats to democracy and human rights, for instance through invasion of privacy and stoking of hatred," it said.

Education systems need

teach about and through digital technology, a tool that must serve the best in-terests of all learners, teach-ers and administrators, according to the report. Technology is evolving according to the report. Technology is evolving too fast to permit evaluation that could inform decisions on legislation, policy and regulation. Research on technology in education is as complex as technology itself. Findings that apply in some contexts are not always replicable elsewhere," it said. The experts noted that a clash between machines and humans has surfaced in the context of debates over generative artificial intelligence, the implications of which for education are only gradually emerging. These fault lines leave the education as excert or more between hope sector torn between hope sector torn between hope any emerging. Insest fautt lines leave the education sector torn between hope for digital technologies' potential and the undeniable risks and harms linked to their application. Not all change constitutes progress. Just because something can be done does not mean it should be done," it said. "Change needs to happen on learners' terms to avoid repeating a scenario like the one observed during the COVID-19 pandemic, when an explosion of distance learning left hundreds of millions behind," the report said, "my

Hindenburg report: Only JPC probe can dig out truth

Hindenburg report: Only JPC probe can dig out truth

INDENBURGS latest revelation has made it difficult for the Adani Group and the SEBI to shield themselves from the truth. They are now on a slippery slope, Plausibly, the link between the corporate behemoth and the markets regulator explains soly the latter has dragged its feet in its investigation into the former's alleged involvement in a brazen stock manipulation and accounting fraud scheme and hit a wall. In the light of the latest revelation, the contention that the investigation by the markets regulator was biased and tainted cannot be dismissed out of hand. It is a dictate of justice that an investor or a beneficiary of investments in a company cannot sit in judgment on the same company accused of improper business dealings. There is a conflict of interest between a regulator and an investor. BJP's argument that the allegation against the Adam Group and the SEBI is a conspiracy by India's Opposition in cahoots with global powers to create financial instability in India is fallacious. The issue is looked at from a political angle because of the widely known close ties between Gautam Adam and Prime Minister Narendra Modi. Adam las become a byword for India's infrastructural development. His clout has easily won him lucrative state contracts for ports, airports, highways, coal mines, power plants and so on. The Prime Minister cannot now insulate himself from the findings of Hindenburg based on whistleblower accounts. A JPC probe has now become imperative to dig out the truth, Since the confidence it placed in the SEBI on January 3 has turned out to be misplaced, the Supreme Court may well take soo moto action to right its earlier error in giving a clean chit and establish the facts.

THAT the Hindenburg revelations on SEBI chief, of holding the contents of the development of the proper contents of the development of the place of the development of the development of the development of the longurgent of the development of the place of the stocked of the sta

THAT the Hindenburg revelations on SEBI chief, of holding investments in Adain related companies, is a fit case to be probed. Though the intentions of that short selling company in disclosing the news are suspicious, the said matter merits an independent probe to uphold the dignity of that office. The regulator of Indian market who regulates the companies from doing wrongs should not be identified with some companies and their interests. The SEBI chief, Madabai Buch, who is facing charges now is the first chief appointed from private sector. To prove that she has no personal interests or favouristism while dealing with the affairs of market, she should come clean from such allegations by allowing proper investigation. The Government should not leave such an important matter to go for guess works or conspirincy theories by people in order to keep the public trust intest in regulatory bodies.

Dr DVG Sankann Ran ex MP Vizianagaram, AP

THE ping pong battle between the rejuvenated opposition and a stubborn BJP, over the serious allegations raised in Hindenburg report 2, is deplorable, (BJP rejects JPC demand, J3 Aug.). In this regard, the said report accused Adami group & SEBI chief of financial irregularities, stock manipulations and accounting fraud. This has truly hurt the interest of investors in financial markets. Hence, the NDA 3 and the LN.D.I.A bloc should set aside politics and arrive at consensus, in the national interest and agree for a JPC probe to ensure transparency and accountability.

**PH Hema Sagar, Old Alwal, Secunderabad

ONGOING heated controversy triggered by latest allegations raised by Hindenburg against SERI chief and her husband is being exploited politically by Congress led Opposition to tarnish image of third tenure of Mod-led central gowernment. Since Opposition is able to create environment effecting goodwill or credibility of Centre, it appears advisable that Centre must shed obstinacy and thereby it is advisable that Centre must shed obstinacy and thereby it is advisable that Centre must shed obstinacy and the office of judicial inquiry which will protect clean image of Centre.

Kolkata hospital horror: In depth probe essential

probe essential

As a rape and murder of a physician at RG Kar hospital in Kolkata shook the conscience of the nation and it has also led to nationwide stir in government hospitals. Despite the severity of the crime, it is surprising that West Bengal Chief Minister Mamata Banerjee pledged to transfer the case to CBI later in case state police fail to crack the case by Sunday. This only goes to show that there is something amiss in the whole episode. One wonders, why Alamata has asked for time knowing well the state police is completely bias and may mess up the inquiry instead of finding out the truth? The state government is totally responsible for the serious lapse instead of floating a new theory to save its face. All in all, there is no denying the fact that there is an insider's role which must be inquired in depth to bring the culprit to justice at the earlies. justice at the earliest.

K. R. Srinivasan, New Bhoiguda, Secunderabad

LoP Rahul not scared of ED or CBI. says Dy CM

BENGALURU: Karnataka Deputy Chief Minister, DK Shivakumar, stated on Tuesday that the Leader of Opposi-tion (LoP) in Lok Sabha, Rahul Gandhi was not scared of the Enforcement Directorate (ED) and the Central Bureau of Investigation (CBI).

the Enforcement Directorate (ED) and the Central Bureau of Investigation (CBI).

Speaking to the media in New Delhi, Karnataka Congress President Shivakumar said this while answering a question on LoP Rahul Gandhi taking to X with regard to the central agencies.

He stated that Congress MP Rahul Gandhi has faced everything in life and he would not be scared of the ED or CBI. When asked about BP leader CP Yogeshwar stating that if he was denied a ticket by the party to contest from the Channapatran Assembly seat, he would stand as an Independent candidate, Shivakumar took a swipe stating "if he is threatened with a CBI, ED probe, Yogeshwar would keep quiet." He adodd, "We don't know yet as the announcement has not been made in this regard.

However, the Dy CM did not reveal the purpose of his meeting with the Congress high command in New Delhi, where he has been camping since Monday.

Amid Hindenburg probe calls, look at JPCs on financial allegations

VIKAS PATHAK

Parliamentary Committee (JPC) to investi-gate the Hindenburg Research allegations against Sebichairperson Madhabi Puri Buch. The BJP has rejected the demand.

Investigative IPC

c body comprising mem-AJPC is an ad hoc body comprising mem-rs from both Houses of Parliament, roughly in proportion to party strengths in Lok Sabha and Rajya Sabha. The representa-tion of Lok Sabha is double that of Rajya Sabha. A JPC, therefore, acts as a mi

Parliament to carry out detailed scrutiny of a specific matter within a specific time frame. Joint committees are set up by a motion passed in one House and agreed to by the other. The details of membership and subjects relating to a particular JPC are decided

by Parliament.

A JPC can look into documents and examine officials of any ministry or institution concerned. If one or more members disagree with the majority in a JPC, they can submit notes of dissent.

It is up to the government to take action on the recommendations of the committee. If it so wishes, the government may launch investigations on the basis of a JPC report. But

it must, in any case, report on the follow-up action taken on the committee's recommen-

Based on the government's reply, the com-Based on the government's reply, the com-mittee submits an 'Action Taken Report' in Parliament. The Action Taken Report can be discussed in Parliament, and the Opposition can ask questions of the government. For the opposition, a JPC matters because it can then get access to all details around an alleged scam, and can also ensure that the is-sue stays in news. This can bring significant political pressure on the government — a rea-

son why all governments resist demands for an investigative JPC.

Financial investigations

Sofar, only three JPCs have been constituted to investigate alleged financial crimes—on the ZG spectrums rain 2013, and the Ketan Parekh share market scam in 2001, and on the securities and banking deals relating to Harshad Mehta in 1992.

The JPC investigation into the Bofors scam was significant to A JPC

Bofors scam was significant, too, A JPC formed in 2013 to investigate the VVIP AgustaWestland chopper scam and the role of alleged middlemen in the transaction did not take off after the BJP refused to partici-

pate.

2G SPECTRUM (2013): The JPC report absolved Prime Minister Manmohan Singh of wrongdoing, saying he was misled about the procedure to be followed by the Department of Telecommunications on is-

suance of Unified Access Services licenses suance of Unified Access Services licenses. It said that the assurance on maintaining full transparency in following established rules and procedures of the Department, given by Minister of Communications and Information Technology A Raja in all his correspondence with the Prime Minister, had been belied.

The BJP and several other opportunities are proposed to the proportion of the prop

history.

The JPC disagreed with the conclusion on The JPC disagreed with the conclusion on revenue loss reached by the Comptroller and Auditor General of India (CAG), saying the 'very move for calculation of any loss on account of allocation of licence and spectrum is ill-con-ceived". It concluded that the consistent stand taken by the Telecom Regulatory Authority of India for non-revision of licence fee and not favour-

ing auction of spectrum was in conformity with the policy prescriptions of New Telecom Policy 99 and the 10th Five-year Plan docu-ment that treated telecom as an infrastructure

ment that treated telecome as miniastricture sector for the decade commencing 2002.

SHARE MARKET SCAM (2001): Heavy exposure to the stock markets led to a run on the deposits of Ahmedabad-based Madhaypura Mercantile Cooperative Bank (MMCB). The exposure was due to Ketan Parekh, a stock broker who was also a direction of MMCB. The supposure was also a direction of MMCB. tor of MMCB. It was alleged that at his be hest, the bank issued pay orders without the backing of funds. Parekh was accused of using this money to rig share prices of 10 Indian companies between 1995 and 2001. The scandal was revealed after MCCB

failed to honour the pay orders it had issued.

A JPC was formed in 2001, when Atal Bihari
Vajpayee was Prime Minister, and it submitted
its report after 105 sittings in December 2002.

The report recommended sweeping
changes in stock market regulations.

However, its recommendations were not fully implemented. Parebt was convicted for a year in 2008 and for two years in March 2014. SECURITIES & BANKING TRANSACTIONS (1992): Allegations that "Big Bull' Harshad Mehta, who had become a household name, had diverted funds from the public sector Maruti Udyog Limited to his own accounts, leading to a 570-point fall in the Sensex, set off a major political storm, and led to the formation of this JPC during the two the formation of the JPC during the two the formation of the JPC during the two the JPC during the two the JPC during the JPC d ure of Prime Minister PV Narasimha Ra

The CBI filed 72 sets of charges relating to criminal offences, and in October 1997, a sp cial court set up to examine the securities so

changes as up to examine the securities scan-dal-related cases approved prosecution on 34 changes brought by the agency. There were also about 600 civil cases related to the matter. There were four convictions, and Mehta himself was sentenced in September 1999 on charges of fraud relating to Maruti Udyog Limited. However, the JPC's recommenda-tions were not fully implemented.

EVERYDAY TECHNOLOGY

WHAT IS A DDOS ATTACK, CAUSE OF TRUMP-MUSK INTERVIEW GLITCHES?

EXPRESS NEWS SERVICE

BILLIONAIRE ENTREPRENEUR Elon Musk nosted former US President and Republican Presidential candidate Donald Republican Presidential candidate Donald Trump on his social media platform X on Monday evening for a live audio interview. However, their conversation started after a 40-minute delay and witnessed several glitches. This happened due to what ap-peared to be a "massive DDoS attack on X", Musk said in a post,

What is a DDoS attack?

A Denial-of-Service (DoS) attack sim-ply means that a website or any other on-line service cannot be accessed because it line service cannot be accessed because it has been the target of attacks from a malicious actor. This is done by directing many users towards an online server simultaneously to "flood" it. It results in slow page loading times or a stoppage in internet services.

Computers connect to the Internet and one another through unique Internet Protocol [IP] addresses assigned to each device. The data they exchange is divided into smaller chunks, called "packets". The tech company IBM's website notes, "By

ech company IBM's website notes, "By using up a resource's available band-width, DDoS attacks prevent these re-sources from responding to legitimate

connection requests and packets." In a distributed denial-of-service

How do such attacks work?

DoS attacks can be carried out in many ways. In a "Smurf Attack", the attacker sends messages to several targets. Assuming false IP addresses while actually using the target's IP address, they send any using me target si a dotters, new seno communication requests. As their targets respond, they end up flooding their own servers, leading to a DDoS attack. In case of an "SYN flood", attackers send a connection request to a target net-

The X Space with Donald Trump and Elon Musk, Reuters

However, they deliberately leave out the necessary step of confirming that con-nection. Multiple incomplete connec-tions result in a load for the server, mak-ing completing real connections difficult.

What are the signs of a DoS attack?

in accessing sites can mean a DoS attack. In the past, X systems have faced dif-ficulties due to other reasons. In 2023, Musk hosted Florida Governor Ron Musk hosted Florida Governor Ron DeSantis on Spaces, the same audio plat-form on X where he hosted Trump. That interview also hegan after a delay of 30 minutes. Musk blamed the high volume of listeners — around 4,20,000 — for the strained system. This time, more than a million people tuned in. Anti-vinus software can help detect unusual online traffic, alert users and thwart DoS attacks.

thwart DoS attacks.

How significant can DoS attacks be?

DoS attacks can cause major disrup-tion, lasting between a few hours to a few days. In 2016, major websites like Spotify and Amazon were unavailable for many hours because of a DDoS attack.

EXPLAINED ECONOMICS Rearing broiler chickens

From backyard hens to 10,000-25,000-bird farms: how the broiler chicken industry has become India's most organised and vertically integrated agri-business

HARISH DAMODARAN

ON 1.5 ACRES of his 2.5 acres of land in Chhattigarb's Rajiandagon district, Raghuvendra Verma (38), raises broiler meat chickens in two environmentally-controlled poultry sheds that house 11,000 and 9,000 birds respectively. He rears day-old chicks that weigh 3-45 g for about 37 days, until the birds are roughly 2-5 kg each, and ready for slaughter. Verma does six cycles annually—each of around 60 days, including 20 days of downtime to remove litter, clean floors, and pressure-wash his equipment. His six backels last year (mid-May 2023 to mid-May 2024) yielded marketable birds with aggregate ON 1.5 ACRES of his 2.5 acres of land in

d marketable birds with aggregate weight of 320,865 kg.

Contract farming

The day-old chicks come to Verma's farm from a broiler hatchery of the IB Group at Mundgaon in the district's Dongarghar terbal. The company, which is officially ABS Exports (India) Pvt Ltd, has a turnover of Rs 11,000 crore, and also supplies feed for the birds and farm-cleaning chemicals such as copper sulphate, formalin, bleaching powder, and hydrochloric acid.

The bruiler feed conventors.

The broiler feed comprises a pre-starter The broiler feed comprises a pre-starter (400 g for 12 days when the chicks grow to 400 g); starter (1,200 g from 12-25 days; when they reach 1,300 g); and a finisher (after 25 days). The birds consume 3,300 g of feed to grow to 2 kg, and 4,000 g to reach 2,5 kg.

At the end of the rearing period, the IB Group takes back the mature birds to market them. Verma gets a "growing charge" of at least Rs 10/kg, which can go up if market prices go up, or if he produces birds with lower mortality rates, above-average body weight, and less feed consumed per kg. (The

weight, and less feed consumed per kg. (The last is called feed conversion ratio, and is an indicator of management efficiency.)

Last year, Verma received a growing charge of Rs 14.891 kg on average, which, on 320,865 kg, translated into a gross revenue of Rs 47.78 lakh. After deducting expenses — mainly on labour, electricity, diesel, and rice husk (which is used as bedding material for husk (which is used as

Newly-hatched pre-vaccinated day-old chicks at IB Group's commercial broiler hatchery in Mundgaon, Rainandgaon, Harish Damodaran

chicks) — of close to Rs 2.5 lakh per cycle or Rs 15 lakh annually, he netted Rs 32.43 lakh. Verma has invested Rs 90 lakh on his two environmentally-controlled sheds that have automatic feeding and drinking lines (one pan for every 30 birds, one water nipple for 10-12 birds), exhaust and air circulation fans, cooling pack, lighting and diesel brooders (to provide heat and keep the chicks warm in the first few days).

the first few days).

Each shed has a control panel to regulate the feeding, brooding, and lighting sys and to maintain the required temperature, humidity, and ventilation levels. Optimum temperatures for bird growth are 32-34 de-grees Celsius in the first three days, gradu-ally reducing to 26-28 degrees during 12-24 days, and 24 degrees or below after 35 days.

Types of poultry sheds

Digeshwar Sinha (30), has a smaller 3,300-sq-foot "open" poultry house for 2,500 birds in Chhattisgarh's Khairagarh-Chhuikhadan-Gandai district.

He has invested Rs 9 lakh in a basic shed with feeders and drinkers, fans, sprinklers, jute curtains to beat the summer heat, and wood shavings-fired bukharis or gas brood-

Open houses require more space per nick, the birds have a generally higher mor-lity rate of 10-12% compared to the 3-5% in irds reared in environmentally-controlled

sheds, and take longer to reach the 2-kg or

sheds, and take longer to reach the 2-kg or 25-kg weights. In the last cycle, 71 out of Sinha's 2,520 birds died. The ones that were marketed weighed a total 5,954 kg, or 2.43 kg per bird on average. The base growing charge for open houses is 8.8 kg, and IB Group paid him Re 13,25 kg, Minus expenditure of Re 21,000 on Re 7,8890 of gross revenue, his net income from that batch was almost Re 58,000. Sinha too, does give harders are some control of the condense in the condense too, does six batches every year

How integration works

now integration works

ABIS Exports has 30,000-odd broiler farmers like Verma and Sinha across India. They are supplied day-old chicks (each costing Rs 28 and pre-vaccinated for Gumboro/Infectious Bursal Disease and Newcastle Disease), feed (8x 40) kg) and technical inputs (line supervisors make 5-6 visits in every cycle). The company markets the grown birds that are directly lifted from the farms by traders.

This integrated contract farming model.

This integrated contract farming model was pioneered by Coimbatore-based Suguna Foods. Of the estimated 14 crore day-old roots. Of the estimated 14 close day-on chicks placed every week in broiler farms all over India, IB Group/ ABIS and Suguna ac-count for 1-11 crore each.

lakh chick placements per week.

The broiler industry is arguably India's most organised and vertically integrated agri-business. Dairies procure milk from farmers, but don't supply them with cows or buffaloes. But poultry integrators have their own feed plants as well as commercial broiler hatcheries.

The broiler integration companies have turned poulty farming —traditionally based on maring 10–20 free-range/ backyand breed birds fed on agricultural byproducts and kitchen waste —into a commercial enterprise even for smallfolders.

even for smallholders. Almost 40% of the IB Group's 30,000 farm

Almost 40% of the IBG roup's 30,000 farmers own environmentally controlled houses with between 9,000-10,000 and 24,000-25,000 chicks, with an initial investment of Rs 450-500 per chick.

IB/ABIS has 10 hatcheries in nine states that can load more than 65 crore eggs annually for hatching into chicks, which are dispatched the same day to reach broüler farms in 12-15 hours. The company has eight feed plants and India's largest soyabean processing unit with a daily crushing capacity of 2,000 tonnes. It supplies de-oiled cake, the residual meal after oil extraction and the

residual meal after oil extraction and the main protein ingredient in poultry feed. Backward forward ahead

Backward, forward, ahead

The broiler chickens produced and sold in India are largely of foreign pedigree stock like Ross, Hubbard and Cobb. The Ross and Hubbard lines are owned by Aviagen; the Venkateshwara Hatcheries Group has a joint venture with Cobb- Vantress, also a US poultry genetics company, for breeding broilers "suited to Indian agro-climatic and management conditions". Suguna Foods has developed its own "Sunbro" pure line broiler breed. The Indian broiler industry is more "backward integrated" at hat alter. Dairies sell branded pouch milk, curd, ghee, butter, cheese and icc-cream, whereas Proiler chickens are predominantly wholesaled and even retailed as live birds in the "wet market" or roadside shops.

adside shops. "Forward integration is the next step. Wo need to move to branded sales of dre chilled, and packed chickens, apart from ready-to-cook and ready-to-eat meat," Zoya Afreen Alam, director of ABIS Exports, said.

een Alam, director of That will need a change in consumer be-four and may take time — like it did with

LONGER VERSION ON

Ex-ISI chief who visited Kabul after Taliban takeover, arrested: reasons, context

MAN AMAN SINGH CHHINA

CHANDIGARH, AUGUST 13

THE PIKKSTAN Army has begun court marial proceedings against Lt Gen Faiz Hameed (retd), who was until recently Director General of the Inter Service Intelligence (ISI), against then The Army announced Lt Gen Hameed's arrest on Monday, He is accused of corruption while in service, and of engaging in questionable activities after retirement.

The general, who was Pakistan's tops yepmaster from June 2019 to November 2021, was considered close to the jailed former Prime Minister Imran Khan, and was in the running to succeed Gen Quarna faved Bajwa as Pakistan Army Chief. Hameed resigned in November 2022, soon after Prime Minister Shehbaz Sharif appointed (then) In November 2022, soon after Prime Minister Shehbaz Sharif appointed (then) Li Gen Asim Munit to the top post.

A couple of weeks after the last American soldiers withdrew from

What has Hamid been accused of? The Field General Court Martial (FGCM)

against the retired general has been ordered following adverse observations made by the Supreme Court of Pakistan about nine

the Supreme court of Pakistan about nine months ago.

On November 14, 2023, the court, which was hearing a petition filled by the owner of a real estate company, sid in a written order that the allegations rade by the petitioner against Harneed were "of an extremely serious nature, and if true, undoubtedly would undermine the reputation of the federal government, the armed forces, ISI and Pakistan Rangers". "Therefore", the three-judge bench led by Chief Justice of Pakistan Quzi Fazz Isa said, "they cannot be left unattended", according to a report published by Dawn at the time.

The petitioner, one Moeez Ahmed Khan, the owner of Top City housing scheme, a private housing society in the Chowki Hameedan area of Islamabad, had accused Hameed and his as

Hameed and his associates of extortion.

It was alleged that in May 2017, when Hameed was a senior officer inthe ISI, officials of the spy agency and personnel of the paramilitary Pakistan Rangers raided the offices of 11p City and Moeez's home and took away gold and diamond jewellery after falsely accusing him of terrorism. The petitioner said he was subsequently forced to "pay Rs 4 crore in cash" in a deal however with the present of the proper with the prope

forced to "pay Rs 4 crore in cash" in a deal brokered by Hameed's brother, Sardar Najaf.

What action has been taken against Hameed? In April 2024, a Court of Inquiry headed

by a Major General of the Pakistan Army was convened against Lt Gen Hameed. The Summary of Evidence has culminated in the our marrial. In a press release, the Inter-Services Public Relations (ISPR) said: "[A] detailed court of inquiry was undertaken by Pakistan Army, to ascertain correctness of complaints in Top City case... Consequently, appropriate disciplinary action has been initiated against Lt Gen Faiz Hameed (Retd), under provisions of Pakistan Army Act. The retired general has been put under arress. However, unlike civiliars, he is not injail. Hameed has been housed in a guest room of an Army officers' mess in Rawalpindi.

In what positions did Hameed serve during his military career? Hameed was commissioned in the Baloch Regiment of the Pakistan Army in

1987. After his promotion to the rank of Major General, he commanded the 16 Infantry Division in Fano Aqil in Southern Sindh. Subsequently, he was posted to ISI as DG Counter Intelligence.
Hameed came into the limelight during the November 2017 Burna by the far right Barelvi Islamist party Tehreeke-Labbaik Palsistan (IPI) Hameed was accused of having engineered the three-week sir-in at the Faizabad interchange that paralysed the Pakistani capital and triggered violence. In 2019, he was appointed DC ISI, replacing Gen Asim Munit, the current Army Chief Imran was Prime Minister at the time. Hameed was considered close to then Army Chief Cen Bajous. However, Bajowa removed him as DG ISI in 2021, apparently after differences between them grew. Imran opposed the decision but eventually gave in. Some experts have said Hameed is being punished for refusing to testify against Imran. They believe that in Pakistant stopsy-turyy politics, Hameed has an eye on the possibility of Imran's fortunes changing for the better.

How often has Pak's Army acted against its senior officers, serving or retired?

Hameed is the third senior officer to have run foul of Gen Munit.

In April 2024, Lt Cen Ayman Bilal Safdar, the GOC 1 Corps stationed at Mangla in Punjab, was forced to resign after the ISI recorded some critical comments he made about the Army Chief during a visit to Saudi Arabia. It Gen Safdar could have had a shot at the office of Army Chief in 2025 if Cen Munir retires at the end of his three-year term.

Before that, in May 2023, It Gen Salman Fayyaz Chani, then GOC 4 Corps at Labore, was sacked after Fulg Saff Plouse, the COC's official residence, was vandalised by workers of Imran's Pakistan Tehruele-Lensaf party.

Dawn reported that Pakistan in illitary courts have convicted a three-star and a two-star general for espionage and muttiny in 2019 and 1995 respectively, in a number of other cases, instead of court-martialling general officers, the military removed them after disciplinary proceedings, Down said.

NEW DELHI | WEDNESDAY, 14 AUGUST 2024

Systemic shortcomings

Sebi must strengthen processes

S-based short-seller Hindenburg Research has made fresh allegations in the Adani Group matter in the past few days. And its target this time have been securities market regulator Securities and Exchange Board of India (Sebi) and its chairperson, Madhabi Puri Buch. Hindenburg has questioned Sebi's objectivity in the Adani probe and alleged Ms Buch is a conflicted party because she and her husband Dhaval Buch invested in one of the funds that is said that was been used for prumping money into Adani charse. It has further alleged that to have been used for pumping money into Adani shares. It has further alleged that the regulator is promoting real estate investment trusts because of Mr Buch's asso-ciation with a large private equity firm that has significant exposure in the Indian

ciation with a large private equity firm that has significant exposure in the Indian real estate market. There have also been other allegations like the Sebi chairperson owning a consultancy firm, suggesting conflict of interest.

Sebi and the Buchs have issued separate statements and answered the issues raised by Hindenburg. Predictably, given the parties and stakes involved, these might not satisfy everyone. Opposition parties, for instance, have renewed their demand for a Joint Parliamentary Committee probe into the matter. A fresh per tion has also been filled in the Supreme Court. It is worth noting that the Supreme Court had heard the matter and, in January this year, rejected the charge that Sebi was not doing enough to probe the issue. It had noted that the regulator completed the investigation in 22 out of 24 issues. In its latest response, Sebi has said it completed one more area of investigation in March, and the only one remaining is nearing completion. ng is nearing completion.

While the closure of the issue will take time, the entire Hindenburg matter has While the closure of the issue will take time, the entire Hindenburg matter has raised at least two important systemic issues that must be debated and addressed. First, the biggiest among the allegations is that of stock manipulation and violation of public shareholding norms through offshore funds. Sebt has thus far not show if this list rue or false. This reflects a serious shortcoming on the part of the regulator of one of the world's biggest stock markets. However, it has tightened the disclosure morm for foreign funds — those exceeding certain limits have to disclose economic beneficiaries and ownership. If the regulator had been in a position to refute the allegations quickly, with facts, it would have sent a strong message to the market. The second issue is related to the chairperson and other key persons in decision-making positions. Sebi has argued that it has a robust mechanism for disclosures. To strengthen the disclosure norms for key persons, and to quell any speculation in the future, the regulator should consider making the financial interests of such persons public. All candidates running for legislatures are, for example, mandated to

sons public. All candidates running for legislatures are, for example, mandated to make their financial interests public. A similar rule could be applied to financial make their financial interests public. A similar rule could be applied to financial regulators after appointment. It will help boost confidence. In fact, it would help if such persons disassociated themselves from instruments and institutions that could be affected by their decision as a regulator. Another associated issue pertains to the appointment itself. This was a rare occasion when a person from the private sector was appointed Sebi chairperson. The recent controversy should not reverse this. Such positions should be open for both people from the private sector and carres bureaucrats, and the best candidate should be appointed. For now, the regulator must complete the investigation and make the findings public as soon as possible.

Jobs for youth

Employment for young people is a global problem

outh employment remains a critical concern worldwide, Following the outh employment remains a critical concern worldwide. Following the disruption caused by the Covid-19 pandemic including widespread unemployment due to mass layoffs, job shortages, and business closures — the labour market has seen a significant recovery, particularly for young people. This positive trend was underscored by a recent report "Global Employment Trends for Youth 2024", published by the International Labour Organization (ILO). The report reveals that the global unemployment rate for youth aged 15to 24 years reached 13 per cent in 2023, a 15-year low. Further, the number of unemployed young people worldwide stored at 649 million, the lowest figure recorded since the turn of the milliennium. The youth employment-to-population ratio (EPR) reached its mercandemic losed at 55 per cent

its pre-pandemic level at 35 per cent, While these are positive signs for the world economy, the report highlighted While these are positive signs for the world economy, the report highlighted significant concerns regarding youth employment. First, although EPR bounced back to its pre-pandemic level, it remains well below the levels seen in the early 2000s. The report suggested an ideal EPR of 40 per cent for both men and women Comparing it with the current ratio, there is a deflict of 79 million folss for young workers, 91 per cent of that for females. Differently put, 72 million of the total 79 million missing youth from the workforce are women. Second, the post-pandemic recovery has been uneven across regions, economies, and genders. Youth unemployment in upper-middle-income countries remained above 2019 levels, with a widening gap compared to high-income countries. The youth unemployment rate in upper-middle-income countries is 1.5 times higher than in high-income countries, compared with 1.3 times in 2019. Additionally, young women faced greater challenges, with sharper increases in unemployment during the pandemic and slower recovery compared to men. Third, the global proportion of youth not in employment, education or training (NEET) stands at 20.4 per cent, which is only marginally better than in 2018. Additionally, one-third of countries are falling only marginally better than in 2018. Additionally, one-third of countries are falling marginally better than in 2015. Additionally, one-third of countries are falling ad in reducing their NEET rates, with low-income countries and women disproportionately represented.

proportionately represented.

India reflects the global trend in youth unemployment. The rate more than doubled from 5.7 per cent in 2000 to 17.5 per cent in 2019 but decreased to 12.4 per cent in 2022, according to another ILO report released earlier this year. However, challenges remain, with higher unemployment rates among graduates and women. Additionally, according to the World Bank, 23.5 per cent of Indian youth were classified as NEET in 2023. This situation is concerning, given the narrow timeframe India has for capitalising on its demographic dividend. Thus, while youth employment is a global challenge, it is particularly pressing for India due to its large youth population. The latest Economic Survey emphasised that India needs to create nearly 785 million non-farm jobs annually until 2030 to accommodate the growing worldore. However, it is unclear how the Union and state governments will address workforce. However, it is unclear how the Union and state governments will address this need. Although the recent Union Budget announced schemes to boost hiring this need. Although the recent Union Budget announced schemes to boost hiring by private companies, the broader challenge remains significant. The road ahead requires a concerted effort to develop comprehensive strategies that not only create jobs but also ensure that these opportunities are accessible to the youth across all regions and demographics. The success of these initiatives will be crucial in securing sustainable economic growth in the medium to long run.

The PSU disconnect

Political calculations may have slowed privatisation, but economic policies to improve the public sector's performance brook no delay

If you need any proof of how the Narendra Modi government's policy on the public sector has undergone a subtle but significant change, last week's introduction of a new amendment Bill in the Lok Sabha should be sufficient. Of course, the gov-ernment remains committed, in principle, to its ear-lier decision to facilitate the exit of public sector understations. (JEEL) in from postpractic saves and ller decision to facilitate the exit of public sector undertakings (PSUs) from non-strategic areas and limit their presence in strategic areas to a bare minimum. But the rollout of this policy appears to have been at least deferred, if not junked.

In February 2021, the Modi government announced its proposal to privatise two public-sector banks in addition to IDBI Bank. Three years have gone by, and now there is only some pope that IDBI spak may be sold off to a

that IDBI Bank may be sold off to a private party by the end of the current private pany by meethod in ecuterial financial year. Early this month, the Union Cabinet met and approved a proposal to amend the Banking Regulation Act, the State Bank of India Act, and the Banking Companies (Acquisition and Transfer of Undertakings) Act, raising hopes of privatisation initiatives making some headway. But as last week's developments

A K BHATTACHARYA But as last week's developments showed, these amendments were primarily aimed at allowing up to four nominees for holders of bank accounts and lockers, extending the tenure of directors of cooperative banks, and at helping the transfer of unclaimed dividends, shares and interest or edemption of bonds to the investor Education and Protection Fund. If the government were serious about the netytaisation of two public-sector banks, it about the privatisation of two public-sector banks, it could have also approved the relevant provisions in

the Banking Companies (Acquisition and Transfer of Undertakings) Act. That, however, did not happen, indicating a longer wait for the Modi government's second privatisation — the saie of Air India In. January 2022 being its first and the only such decision so far. Even the pace of disinvestment of government equity in PSUs has considerably slowed. Barring a blob of research

equity in PSUs has considerably slowed. Barring a high of two years, when distinvestment revenues were close to It Itillion each in 2017-18 and 2018-19, the government's performance on this front has been on asteady decline, particularly after the pandemic. Even during the heydays of distinvestment, the receipts were between 0.5 and 0.6 per cent of gross domestic product (GDP), and subsequent years have seen a further fall from 0.25 per cent in 2019-20 to 0.11 per cent of GDP last year. The official commentary on the gradual decline in distinvestment receipts more on value creation, implying that a decision to sell PSU equity will be taken only when needed and at the right moment.

HILL

HILL Have PSU dividends gone up to give the government the confidence that there are early signs of value resion and, therefore, their improved performance would at least improve non-tax revenues and bolster its finances? Not really, bividends from non-financial PSUs have grown at a slow pace, doubling only in the last 10 years to \$50,000 crore in 2023-24. By another yardstick, dividends as a percentage of GDP fell to only 0.17 per cent Ilast year, compared to 0.28 per cent in 2013-14. So, dividends are not rising rapidly, and disinvestment receipts are not rising rapidly, and disinvestment receipts are falling. Is the government's approach to the pub-

lic sector then more focused with respect to its investment strategy?
A cursory look reveals a mixed picture. The story of the public sector's capital outlay in the five years before Covid is starkly different from what unfolded in the five years after the pandemic. From a capital outlay of £3.32 trillion in 2013-14 (the last year of the Mammohan Singh regime). PSUs saw their total investment jump to £8.52 trillion in 2019-20. In terms of its share in GDP, PSUs' capital outlay rose from 2.9 per cent to 4.2 per cent in the same period. This rise was driven as much by trebling the government's equity infusion as by the PSUs' ability to generate more internal resources and raise more borrowing. What this also showed was that despite the rhetoric of strategic sale and disinvestment of shares in PSUs. He Modi government was busy providing more resources to the public sector and even enhancing their ability to raise more resources.

In the five years following the pandemic, the PSU to trop has changed starfife-capital to facility the the start of the table to the terms.

their ability to raise more resources.

In the five years following the pandemic, the PSU story has changed significantly, indeed, by the end of 2021-22, capital outral by PSUs feil almost by a fifth. The decline could be largely attributed to the PSUs' inability to raise internal resources or even mobilise higher borrowing. The fail would have been sharper but for the government propping up the public sector with increased equity infusion, a trend that has continued since then. The capital outlay situation in the last two years has got better. At 84.4 trillion in 2023-24, the declining trend has been reversed, but as a percentage of GDP (2.84 per cent)

trillion in 2023-24, the decilining trend has been revensed, but as a percentage of GDP(2.84 per cent) this is still lower than what prevalled 10 years ago (2.9 per cent in 2013-14).

The worrying trend is that the public sector's investment story in the last few years has been kept intact mainly by the government pumping in more by way equity infusion. The public sector's ability to generate more internal resources or raise loans has been severely undermined in the post-Covid world. If the government believes in value creation has been severely undermined in the post-Covid world. If the government believes in value creation as a strategy for the public sector, it needs to urgently do something more than jux infusing additional equity, which in any case is largely restricted to a handful of entities like Bharat Sanchar Nigam Limited, National Highways Authority of India, and Indian Railways, accounting for about \$8-90 per cent of the total equity outlay announced in the last couple of years.

couple of years.
The government's ability to endlessly infuse mor The government's ability to endlessly influse more equity into more PSUs is obviously constrained, and it must Introduce other performance metrics to ensure that they deliver better financial results to relieve the pressure on its finances. Politically, the government may like to go slow on its privatisation plan and continue to pump in more resources into the PSUs. But there has to be a credible and effective economic policy response to overcome the current financial performance challenge posed by the public sector. The continuing disconnect between politics and economics is not desirable.

Rethinking the Broadcast Bill

RAISINA HILL

the Ministry of Information and Broadcasting's decision to hold back the Broadcasting Services (Regulation) Bill, 2024, is welcome news.

Television broadcasting, as we know it, has been in genteed decline for a few years now. From about 200 million homes (960 million people) in 2019, it now reaches 150 million homes (945 million people). Going by the annual FICCI-EY report, the business earned 1590 follocore across advertising and may revent earned ₹69,600 crore across advertising and pay revenue in 2023; down from ₹78,700 crore in 2019. The

enue in 2023; down rom (*8,700 crore in 2019).

Bast few years have been marked by consolidat

— Disney acquired Star India,
Reliance took a majority stake in
Vlacomis and later merged it with
Disney. As if matures, television will
settle down at 100-125 million
homes (480-600 million people),
with more than half of them on the
state-coven Old Feestlish, Note all with more than half of them on the state-owned DD Freedish. Note, all of this refers to linear pay television. There is lots of growth beyond it— in free television, on smart TVs, and in streaming. Indian television began with some great shows—Buniyuad,

some great shows — Buniyaad, VANITA Antakshri, Banegi Apni Baat, Saans, among others — in the eighties and nineties

among others — in the eighties and nineties. Yet, it never hit a creative high nor did it reach a billion people as the largest media after melio. Despite being the second-largest TV market in the world, India remains one of the smallest in terms of revenue, per unit realisation, and profit compared to similar markets like Brazil.

There are several reasons for this — the biggest being price regulation. It came into force in 2004 after the Telecom Regulatory Authority of India (Trai) was appointed as broadcast regulator. Its releases the total results of the remainder of the results of the remainder of the results of the remainder of the remain

(Trai) was appointed as broadcast regulator. Its relentiess bid to regulate price, ratings, and even the agreements between trade and broadcasters meant linear TV never had its HBO. Sopranos or Game of Thrones. All attempts at differentiated, premium programming on linear television such as Star One, failed. The daily soap factory, geared towards maximising eyebalis (and therefore advertising), which began in 2000 with Kyunki Saas Bhi Kabhi Bahu Thi. continues to this day. Even after attenuing came in 2016 and took off in 2018. Trai ng came in 2016 and took off in 2018. Trai

kept issuing tariff orders. This, in a market where video can be watched through three competing technologies (cable, satellite, internet), on myriad devices (TV, phone, laptop), with a wide range of pricing options from free to hybrid to premium for

pricing options from free to hybrid to premium for online video. Now imagine, if the same regulations that stymied the growth of broadcasting are applied to

stymied the growth of broadcasting are applied to OTT, social media, and online publishing. It is against this background the Broadcast Bill needs to be viewed. For too long, only the Cable Television Networks (Regulation) Act, 1995, call with TV, even while policies, guidelines on uplinking, downlink-ing, equity caps, fortegin invest-ments have been issued. The last big change was in 2011, when the Cable Act was amended to enable digiti-Act was amenace to enance inguis-sation. Therefore, it is a good idea to have an overarching legislation that is up to speed with new ways of watching video. The first draft of the Broadcast Bill came in November 2023. In July his year, the ministry invited com-ments to the second draft of the Bill

after assimilating feedback on the first one. Not sur prisingly, there was a outcry. Earlier this week, the ministry announced the Bill will go through another

ministry announced the Bill will go through another round of consultations till October 15. There are three issues with the Bill. One, an obsession with force-fitting streaming/online video into the same regulatory slot as broadcasting. It keeps talking of "OTT Broadcasting. It keeps talking of "OTT Broadcasting. However, as lawyers, media firms, and others argue, streaming is an on-demand, one-to-one way of watching shows like Anupana or Heeramandi. It is a time-shifted choice we make, unlike linear TV where you watch a show at a fixed time on TV. Many developed countries, the UK, Singapore, Germany, do not put OTT in the definition of broadcasting, even if both are under the same legislation. They are regulated separately. In South Korea, a highly digitised country, OTTs are regulated under telecom laws.

Two, its approach is somewhat paternalistic—there is a lot of emphasis on penalties and apolo-

gies, but very little on what the Bill seeks to do. A gies, out very tittle or what the sin seeks to do. A basic reading makes it clear that it alms for complete control over everything that we watch or read online. A regulator in the UK, where Ofcom, an industry-funded body, does a decent job, once told me that any new piece of regulation/policy/guide line it considers goes through a cost-benefit analysis. What is the cost of making this change versus ysis. What is the cost of making this change versus the cost of not making it? Does a new piece of legislation damage or benefit the ecosystem, consumer choice and business? There is no analysis on what the Bill seeks to or could achieve.

Three, unlike the Cable Act, this is a very difficult Bill to read, it took hours to make sense of it.
Online video has brought diversity in our watching, and has unleashed the creative provess

watching, and has unleashed the creative prowess of India's dream factories, which are now making Emmy-winning shows like Delhi Crime and superbly crafted ones such as The Family Man, Patatal Lok or Rocket Boys. In news, it has given a voice to many Indians who were getting left out of the mainstream news ambit. In information, platforms like YouTube, Reels, WhatsApp and Linkedin have democratised both creation and access.

A Bill that seeks to force-fit a new way of watching video, on to an old-fashione

A Bill that seeks to force-fit a new way of watching video, on to an old-fashioned one — especially one that suffered from a lack of farsighted regulation — is bound to pour cold water on free speech and expression across the board. This will lead to a lack of diversity and dampen a business that has been growing well.

In 2023, online video made over \$30,000 crore in ad and pay revenues, according to Media Partners Asia. By 2028, this is expected to reach \$57,400 crore. This growth is predicated on a free market without price or other regulations that could cripple choice and the ease of doing business. Both will be a reality if the Bill is passed in its current form.

As the industry prepares another round of responses, the ministry must ask itself whether it wants online video to follow the same path as linear television. If not, then this Bill needs to be reconsidered from scratch.

sidered from scratch.

astrocartography, from teenage rebellion in America to struggles with mental health. The feeling of rootlessness that Ms Mattoo carries

pervades all aspects of her life but she also is able to learn to live with it. In the

The contours of displacement

Born in Srinagar, Priyanka Mattoo ha lived at 32 different addresses across India, the UK, Saudi Arabia, and the US overthecourse of four decades. A few order to gain the capital to slowly build their own house in Kashmir. On their trips, their own house in Kashmir. On their trajh-thefamily would collect decorative tems and carefully bring them back. This is the context that provides the title to the memoir. "There is a Kashmiri phrase, chhard daud e mahe adil," bid milkand mosquito bones, used when someone is describing thingso a rare and precious tha the listener should question their very

existence."The phrases serves as a reminder to Ma Mattoo of the things her family had gathered over time and the floetingness of those bird years of happiness before the flatingtensions in the Valley Force of the most of the flating tensions in the Valley Force of the most of the flating tensions in the Valley Force of the most of the flating tensions in the Valley Force of the flating tensions of the section of the flating tensions of the flating tensions of the section of the flating tensions of the flatin

had not been to Kashmir in years by that point — had been holding out hope for things to calm down followed by a return. The house's destruction catalysed the utilitate uprooting. From there, the book takes on a life of its own and the essays cover a wide-ranging array of topics, each one exploring a particular year or extended time period in Ms Martoo's life in connection to the subject. There is the time period in Ms Matro's life in connection to the subject. There is the conventional "Such a Nice Face" which retreads the tried and tested narrative about societal expectations from women regarding their appearance and grooming as well as the ways in which they are objectified by the male gaze. But there is also fascinating suffrauch as "Dotted Lines" which looks at how universally compute des music is as "Dotted Lines" which looks at how universally popular desi music is blurring state lines between India and Pakistan in the context of All Sethl and Hasan Raheem, a portion of which was published before in The New Yorker to great acclaim. That said, few essays enc where they begin, often going on tangents and jumping from one

thought to the next, deftly mimicking the natural flow of daily conversations. Many pieces reflect on Ms Mattoo's family and are lovingly written

MEDIASCOPE VANITA KOHU-KHANDEKAR

Many pieces reflect on Ms Mattoos family and are lovingly written character studies of some of the most important people in her life. In 'A' Remarkably Self-Assured Debut', she focuses on her dashing, regal maternal grandfather whose "nesourcefulness and showstopping presence would be his genetic legacy." He was the patriarch of a large joint family which included his younger siblings and their familles where hem phasised education for the girls and forbade them from doing any stereotypically feminine work or domestic labour. As a counterpoint, "I'll Shout'Not' follows

a counterpoint, "I'll Show You" follows satow you!" follows her maternal grandmother and her love for crochet that passed down to Ms Mattoo. Also passed down is the gene that makes one susceptible to dementia, which had "gently bloomed" for her Nani in her waning years.

....

Continuing this trend, "A Good Match" explores her parent's loving, enduring marriage and why she considers them soulmates even if they considers them soulmates even if they would never admit it, at least not in so many words. Following immediately after it in the collection, "Basherit" looks at Ms Mattoo's experiences in romance and how though the desire to marry a fellow Kashmiri did not come to fruition, she

Bird Milk and Author: Priyanka Mattoo Publisher: Penguin Viking Price: ₹699

found a thoughtful and funny partner in the white Jewish man she did end up marrying. Togethe all these essays showcase Ms Mattoo's goal of moving away from narratives that centre "the many [tragic] things th have happened to us" and instead

Us and instruc-illuminate a community. The other essays cover anything ar everything from late-night sandwich in Milan during a junior year abroad t mapping out places that work best for an individual's growth through

pervades all aspects of her life but she also is able to learn to live with it. In the closing essay, she ponders: "I'm starting to suspect that the place! crave, the home I've yearned for, is no more than a web of childhood memories suspended in time. They were so long ago that I can't be certain they were real. Were they something is bould question? Bird milk, mosquito bones. But in the end, I don't think it matters. I might live with this feeling, of hovering between years and places, content in my own space yet craving another, for the rest of my life."

Ms Mattoo's memor polgnantly mirrors the contours of loss and displacement as it illustrates the sharp edges of nomadic living and the search for home by turning memory into remarkable colourful curiosities.
